With the AO Dual Viewing Microstar® you both see the same image for immediate and more effective communication. At the same time, an illuminated transparent arrow can be positioned anywhere in the field to pinpoint specimen detail.

Both viewers enjoy the same sharp image of the entire field, and the AO infinity-corrected optical system assures outstanding contrast, resolution and color correction.

The Microstar Autofocus stop saves time when changing slides or magnification, because each slide can be brought into perfect focus simply by touching up the fine adjustment. And, since the

nosepiece is gravity-loaded, it's practically impossible to break slides or damage the objectives.

For that fast second opinion, immediate verification, routine lab training, or wherever accurate communication is essential, the AO Dual Viewing Microstar microscope is an invaluable instrument.

For more information, see your AO representative, or write for detailed literature.
