## Complete reproducibility in sub-microliter volumes

Would you like to inject samples at  $0.1\ \mu\text{l}$  with high repeatability? You can . . . with our new Sub-Microliter Liquid Injector. With this all-metal injector there is no liquid hold-up or dead volume because the carrier gas completely flushes the sample from a capillary needle. Repeatability of delivery is better than 1%. It's as near perfection as a hand-held injector will get for some time to come. □ If you need to make perfect  $0.1\ \mu\text{l}$ ,  $0.2\ \mu\text{l}$ , or  $0.5\ \mu\text{l}$  injections, try our Sub-Microliter Liquid Injector. It's described in our catalog . . . let us send you a copy. Write to Hamilton Company, Post Office Box 7500, Reno, Nevada 89502.

HAMILTON 

Circle No. 6 on Readers' Service Card

# Why we think the Brush 500 is your best choice in an XY recorder.

**RELIABILITY.** It's guaranteed by our exclusive Metrisite® non-contact servo-loop feedback system. You get 99.85% linearity. But you don't get noise, slide wire troubles, dirty pots, wear and the maintenance problems of potentiometric feedback systems.

**CRISP TRACES.** We don't believe in smear tactics. But we must say others don't give you traces as crisp as ours. Reason: we have pressurized inking that forces ink into the paper, instead of simply laying it on the surface. Our pen never needs priming, even

after long periods of not being used.

**SPEED.** The 500 does a fast 40 inches a second. Which makes it 50% or 100% faster than most anyone else's. And it

accelerates at 1650 in/sec<sup>2</sup>. It's a mover.

**MORE FEATURES.** Like electrostatic holddown. Easy rack mounting. Electronic limiters that eliminate collisions between pen and frame. And a price we think will please you.

For information on this excellent XY recorder with built-in preamps with a sensitivity range of 100 $\mu$ V/div. to 1.0 V/div., write Gould Inc., Instrument Systems Division, 3631 Perkins Avenue, Cleveland, Ohio 44114. Or Rue Van Boeckel 38, Brussels 1140, Belgium.

## COVER

The black-eyed susan (*Rudbeckia hirta*), like many flowers, has an ultraviolet pattern. The pattern is visible to pollinating insects, but invisible to humans. The chemical basis of this ultraviolet pattern has now been explained. See page 527. [W. R. Thompson *et al.*, Cornell University, Ithaca, New York]

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

# STRAIGHT TALK

## Our New Model 20 Programmable Calculator. Latest In the Series 9800.

It speaks and understands English. It speaks and understands Algebra. It really understands your problems. It was designed for instant programming right at your desk. The Model 20 will take you from concept to final solution of your problems

faster than any other system on the market.

### Incredibly Natural Language.

You'll quickly grasp the operating concepts of the Model 20, because it uses a natural but powerful language that lets you work with algebraic symbols, formulas, and English language instructions. And, if you already know how to program, you'll

appreciate features that once were exclusive to languages like FORTRAN or BASIC: Enter and Format statements, function subroutines, and callable subroutines with parameter passing.

Talk out a problem with your Model 20. Key in your problem exactly as you would write it on paper. Press EXECUTE and there's your answer. It's deceptively simple.

With the Model 20 you always know where you stand. Its alphanumeric display and printer give you operating instructions, show your formula as you key it in, and

completely label your input and output data.

### Easy To Get Along With.

One of the nicest things about the Model 20 is that it doesn't bite. If you make a mistake, your display not only tells you there's an error—but precisely what and where the error is. Then it's a simple matter to insert, delete, or replace anything from one symbol to an entire line with just a few quick strokes on the editing keys. It adds up to this: You don't have to be an expert to operate the Model 20. Because of its error detecting and correcting techniques,

the Model 20 is the fastest and easiest programmable calculator available.

### A Word About Power.

What really counts is not that our calculator will solve up to 36 simultaneous equations, but what you can do with that power. With the Model 20 you'll spend less time getting answers and more time building ideas. Another thing. Our keyboard is modular. So if you don't like our setup, you can build your own.

The Model 20 can be plugged into our hardworking Series 9800 Peripherals: X-Y Plotter, Type-

writer, and Card Reader, to name a few. An added plus—it interfaces with test instruments. The basic unit, including our built-in alphanumeric display and printer is \$5,475, with immediate delivery.

For more information or a "hands-on" demonstration, write: Hewlett-Packard, P.O. Box 301, Loveland, Colorado 80537. In Europe: 1217 Meyrin-Geneva, Switzerland.

# Universal REPIPET<sup>®</sup>

dispenses any reagent  
from any bottle.

**Simple operation.** Lift plunger to fill, press to deliver. Accuracy 1%.  
Reproducibility 0.1%.

**Fit any container.** Assortment of screw caps (supplied) fits the Universal REPIPET to the bottle you have on hand. Uncommon screw caps or adaptors for glass joints are supplied by L/I at no charge upon request.

**Leak-proof coupling.** Unique Teflon coupling can't slip or leak, provides secure connection for any length of Teflon tubing.

**Cut to fit.** Just slice off Teflon tubing to reach the bottom corner of any container for emptying contents completely.

Magnifying  
indicator

Now there's a L/I REPIPET that will dispense from any screw cap or ground glass joint container commonly found in the lab. Just trim the Teflon<sup>®</sup> inlet tube to reach the bottom corner of your container. Because only glass and Teflon come in contact with reagent, you can safely dispense any liquid except HF through this odorless and transparent instrument. Concentrated acids, concentrated alkalis, and chlorinated hydrocarbons pose no problems for the REPIPET.

Universal REPIPETS are stocked in 1, 5, 10, 20, and 50 ml sizes. Price \$75, including 5 screw cap adaptors and magnifying indicator. Our old standby REPIPETS (all PYREX<sup>®</sup> instruments) are stocked in the same sizes starting at \$55.

Order from Labindustries or your distributor.

The same REPIPET fits all containers.

A graphic consisting of seven black balloons of varying sizes, each with a thin black string extending downwards. The balloons are arranged to form the letters 'A', 'A', 'A', and 'S' in a stylized, vertical manner. The first 'A' is formed by two balloons, the second 'A' by two, the third 'A' by two, and the 'S' by two. The strings of the balloons are vertical lines that pass through the letters.

# You work hard enough getting it all together.

# Don't spoil every- thing when you separate it.

To keep your research projects from turning into remorse projects, insist on the Sorvall RC2-B Automatic Superspeed Refrigerated Centrifuge.

Year after year, the RC2-B has *proven* itself in performance. A fact to remember, if you want flaw-free separations. And, oddly enough, the RC2-B is newer in various ways than some latecomers. Because we set out to build the best—and then kept on making it even better, in feature after feature. Nearly all Sorvall improvements, particularly new rotors, are designed to fit all appropriate earlier models.

Sorvall's exclusive Gyro-Action Direct Drive gives you unmatched smoothness in acceleration, runs, and deceleration. Speeds? Up to 20,000 rpm and forces to 48,200 x g with a 400 ml rotor—and without a vacuum pump.

Depend on low-speed reliability as well. Our electronic speed control works at 750 rpm, provides rapid acceleration when you wish, and maintains pre-set speeds despite line voltage fluctuations.

The RC2-B's improved temperature control makes it almost impossible for unstable temperatures to wreck your samples. And you don't have to re-set the temperature control every time you change rotors.

Other advantages worth comparing: Automatic programming. A big, smooth-walled, stainless steel chamber. Compatibility with 8 angle and horizontal rotors, *plus* our SZ-14 Reorienting Density Gradient Zonal Rotor. No rotating or complex seal assemblies. GK continuous flow inserts in the SZ-14 can process up to 1400 ml per minute (84 liters per hour) and can collect up to 800 ml sediment.

The motor can be removed and reinstalled in 5 minutes. Repairs are remarkably infrequent—and remarkably easy. Maintenance is almost as simple as replacing a light bulb.

Around the world thousands of units are in continuous use in research projects—far more than any other high-speed centrifuge. So if you prefer unspoiled separations, why not get together all the facts about the RC2-B—today? Simply write to Ivan Sorvall, Inc., Norwalk, Connecticut 06856.

Ask for Bulletin SC-8YH

The world's best automatic micropipet now comes in 25 different sizes.

You may not need every size, but we probably have every size you'll need.

We've just made the Eppendorf Microliter Pipet more useful and more versatile than ever before.

We haven't done it by changing its phenomenal accuracy and precision (99% sample recovery with aqueous solutions; standard deviation under 1% at 10  $\mu$ l).

We haven't done it by changing its completely automatic, push-button operation, or by changing the convenience of disposable polypropylene tips which keep liquid separate from the pipet mechanism, thereby eliminating cleaning and contamination problems and the potential hazards of mouth pipetting.

We've done it simply by making more Eppendorfs in more sizes. To be exact, 25 different Eppendorf models are now available, dispensing exact liquid quantities in volumes of 5, 10, 15, 20, 25, 30, 40, 50, 60, 70, 75, 80, 90, 100, 120, 150, 200, 250, 300, 400, 500, 600, 700, 750 and 1,000  $\mu$ l. No other micropipet system offers such a wide selection of volumes.

Why so many Eppendorf models? To make pipetting easier. You may not need every size we make, but think of the multiple pipetting you can avoid (and the accompanying likelihood of error) with several Eppendorf pipets on hand in the volumes you require most frequently.

The complete range of Eppendorf models and accessories are fully described in our new brochure. For your free copy, write: Eppendorf Division, Brinkmann Instruments, Cantiague Road, Westbury, N.Y. 11590. In Canada, write: Brinkmann Instruments (Canada) Ltd., 50 Galaxy Boulevard, Rexdale (Toronto), Ontario.

Circle No. 66 on Readers' Service Card

tional origin, or sex will remain outside well into the next century. The very fact that NIH advisory positions are predominantly held by white males puts the lie to Gross's statement that these positions are not plums. Despite poor direct compensation, they pay off in terms of prestige and inside contacts in the Washington establishment; if not, they, like truly low-status, low-paying jobs, would be overrun with women and nonwhites.

Some of us who are interested in equal opportunities for the socially disadvantaged are not concerned about "repairing a building foundation with mucilage." We want to change the foundation so that merit, finally, can become the sole criterion which decides a person's position. To accomplish this change we must overcome current discriminatory practices. I look forward to the day when affirmative action will no longer be needed, when merit can be judged objectively.

CLAIRE M. BERG

#### Flood Damage

The Wilkes-Barre, Pennsylvania, region was recently inundated by the flood of June 1972. Wilkes College, located in Wilkes-Barre, was especially devastated, damage now conservatively being estimated at \$10 million. One of the major losses was the library building and its complete undergraduate and graduate holdings in biological sciences, chemistry, mathematics, and physics.

We are making every effort to rebuild our library inventory. We appeal to all of our colleagues at sister institutions to contribute whatever they can from their personal or departmental libraries. Any, and all, donations will be highly appreciated.

REED D. ACHESON

## Scan gels without staining

#### SCANNER

The ISCO Gel Scanner gives you a UV absorbance profile of an electrophoresed gel without removing it from the running tube for staining. Gels are polymerized and electrophoresed in a UV-transparent quartz tube, and transported at intervals during and after migration through an ISCO absorbance monitor for scanning at 254 or 280 nm. Sensitivity and resolution is comparable to conventional instruments costing five times as much. The absorbance monitor can also be used for chromatographic columns and centrifuged density gradients.

#### ELECTROPHORESIS APPARATUS

The linear alignment of gel tubes, and a bottom tank which can be easily lowered for access to all the tubes, offer you convenience you've never had before. Buffer tanks hold completely submerged tubes to 10" in length, and have electrical interlocks and cooling.

ISCO makes additional instruments for electrophoresis, column chromatography, and other biochemical laboratory techniques. Everything is described in our catalog: a copy is waiting for you.

#### Statement on

#### Termination of Pregnancy

The following statement was signed by 271 professional biologists who attended the annual symposium meeting of the Society for Developmental Biology. The symposium was held at Wesleyan University, Middletown, Connecticut, from 7 to 10 June 1972.

As developmental biologists, one of our major social concerns is to identify and promote those conditions that favor normal development of the human embryo and fetus, and that culminate in the physical health and well-being of the child, mother and family. These conditions include a legal framework within which a woman, in consultation with her physician, can elect to terminate an undesirable pregnancy.

We the undersigned, attending the 31st Symposium Meeting of the Society for Developmental Biology, commend the stand taken by the Federal District Court of Connecticut in the recent case of "Women vs. Connecticut." In that case, Judge J. Edward Lumbard concluded "... that the state's interests are insufficient to take from the woman the decision after conception whether she will bear a child, and that she as the appropriate decision maker, must be free to choose." We feel that this decision is a definitive statement that deserves national attention.

The signatures are available upon request from the Society for Developmental Biology. They include the officers of the society, as well as prominent developmental biologists from colleges, universities, and professional institutions throughout the country.

11 AUGUST 1972

Identification of the 19.2nsec decay component of quinine sulfate. Spectrum was produced in less than one minute. Light pulser rate: 40,000 per sec.

## Fast and accurate nanosecond fluorescence lifetime spectra using the single-photon counting technique

#### A digital approach

Single-photon counting, a highly sensitive technique which actually samples individual quanta of light, is generally acknowledged to be the best method of measuring very low light levels. Now Ortec has applied this technique to the field of nanosecond fluorescence spectroscopy. The Ortec Model 9200 Nanosecond Fluorescence Spectrometer uses a short duration optical light pulse to excite the sample and measures the decaying fluorescence intensity as a function of time over several decades.

Our system offers sensitivity and accuracy increased by orders of magnitude compared to existing analytical techniques. This new system is already producing outstanding results in studies of chemical reaction rates, molecular structure, and molecular conformation changes.

#### Improved data reduction

A multichannel analyzer records each detected fluorescence photon against a time base for immediate CRT display or Teletype printout of the spectrum. Data is manipulated and stored in a digital,

computer-compatible mode. A computer interface can thus be incorporated to facilitate reduction of complex data.

The 9200 system will measure both single and multiple decay components. Multiple components are clearly represented on the spectrum and easily read. (The spectrum above shows the straight line response of a sample having a single lifetime.)

Sensitivity is better than 1 ppb quinine sulfate in sulfuric acid. Linearity is typically better than 1%.

#### System components

The exact system configuration will depend on the user's particular requirements, but the basic system consists of a nanosecond light pulser, sample chamber including photomultiplier, multichannel analyzer, and associated electronics. The entire system is designed around NIM-standard modules for enhanced flexibility, reliability, and ease of servicing.

#### Data sheet on request

If you'd like more information on the Ortec Model 9200 Nanosecond Fluorescence Spectrometer, we'd be happy to send you a data sheet that tells all about it. Just write or call Ortec Incorporated, 110 Midland Road, Oak Ridge, Tenn. 37830. Phone: (615) 482-4411.

In Europe: Ortec Ltd., Dallow Road, Luton, Bedfordshire. Phone: LUton 27557. Ortec GmbH, 8 München 13, Frankfurter Ring 81, West Germany. Phone: (0811) 359-1001.

# GME OXYGRAPH

**Model KM**

Developed in collaboration with Dr. S. Kuby of the Enzyme Institute, University of Wisconsin, Madison.

EUROPEAN Manufacturing Branch:  
Gilson Medical Electronics (FRANCE)  
69, Rue Gambetta • 95 — Villiers-Le-Bel, France

New Clark-type electrode assembly can be used with Gilson Model KM or Model K Oxygraphs without modification. The Clark-type electrode eliminates the problems which occur when using a bare platinum electrode with high protein concentrations and particle suspensions such as whole blood and bacteria, and permits the use of the polarographic method in nonconductive solutions. The response time is only slightly greater than that of the bare platinum electrode.

- SENSITIVITY
- RESPONSIVENESS
- STABILITY

A recording oscillating oxygen cathode, the OXYGRAPH is a specific application of polarographic analysis. A single polarizable micro platinum cathode is coupled by a saturated KCl salt bridge to a nonpolarizable saturated calomel reference anode. Instead of recording a complete current-potential curve, only the limiting current (that current which is limited by the concentration of oxygen in solution) is recorded at an applied constant polarizing voltage, of about  $-0.6$  volts with respect to the anode, across the indicator polarizable cathode.

- A micro platinum cathode for recording rapid changes of oxygen concentration in solution
- Large 20-cm span along the y-axis for a high degree of accuracy
- Sensitivity from ten- to a thousandfold greater than that of conventional gasometric methods for  $O_2$  determinations
- Rapidity of measurements and ease of continuous recording permit accurate determinations of very rapid reactions involving molecular oxygen in solution

## The New Physics Report\*

During the past several years, the National Academy of Sciences has issued reports on the status and needs of various branches of science. A voluminous report on physics has just been released. Some of the best resources that the academy can bring to bear have been mustered in support of these efforts. A substantial fraction of the most competent and distinguished scientists in various fields have labored diligently on committees and panels preparing the materials. Drafts have been reviewed by the prestigious Committee on Science and Public Policy. Typically, in a foreword, the president of the academy has bestowed his blessing.

The reports have shared many features. They have portrayed opportunities (often interestingly and imaginatively), decried the limited level of support for the particular science, predicted diaster if present trends were continued, and offered the wisdom that most problems would be solved if more money were made available.

Since the reports have been so obviously self-serving, it is not surprising that the prodigious efforts devoted to them have come to little, and it is unlikely that the latest edition will fare much better. This is regrettable, because an excellent case could be made for maintaining the vitality of physics. Within its pages, the report contains interesting and persuasive material. Chapters devoted to the "Nature of Physics" and "Physics in Perspective" are particularly worthwhile. The latter chapter provides an especially good survey of the status of various branches of physics. Some of the potential impact of this material is lost in the excessive length and scope of the remainder of the report. Credibility is also strained by occasional unconvincing arguments and statements. The committee seemed unable to be completely objective in its treatment of high energy physics. After more than 20 years and the expenditure of more than a billion dollars, high energy physics has had limited direct impact on other areas of science and, indeed, on the rest of physics. In contrast, low energy nuclear physics and the physics of energies of 100 volts and less has had very great impact. This impact has taken the form of interaction within physics, usefulness to other disciplines, and many technological applications. Examples of recent contributions of enormous value are laser developments and microelectronics.

Experimental technics and equipment developed by physicists have often been applied in other fields. Indeed, new instrumentation is one of the most important factors in the vitality of the natural sciences. Another major kind of contribution has come from the migration of physicists into such fields as astrophysics, geophysics, and biophysics. A substantial fraction of the nation's best geophysicists received their basic training in physics. High energy physicists have been among the migrants, but their training has not equipped them so well to be creative in other fields.

Although the committee report fuzzes over the situation, the reality is that there are two quite disparate kinds of physics and only one is highly relevant. Both types should be supported, but in a crunch, high energy physics should defend itself on its own merits.

The procedure of asking representatives of a discipline to prepare material on their own field has some merit. But the experience of many years and many reports bears out the bromide of not asking the fox to guard the henhouse. Surely the academy can improve on that procedure.—PHILIP H. ABELSON

See all the microscopic world the eye can see through Nikon's L-Ke. And if you want photographs: black and white or color, still or cine, it's still the ideal photomicroscope.

The L-Ke system brings it all into focus for you through an array of incomparable Nikon optics and acces-

sories, interchangeable and securely mounted in seconds.

Koehler illumination provides you with sharp contrast and a clear crisp image throughout a broad magnification range.

The L-Ke is the ideal microscope system for all types of scientific and

industrial research. Look into it now.

Call or write: Nikon Inc., Instrument Division, Ehrenreich Photo-Optical Industries, Inc., Garden City, N.Y. 11530. 516-248-5200. (In Canada: Anglophoto, Ltd., Ont.)

## BIOLOGY AND RADIOBIOLOGY OF ANUCLEATE SYSTEMS

edited by **SILVANO BONOTTO, ROLAND GOUTIER, RENE KIRCHMANN, and JEAN-RENE MAISIN**, all at Département de Radiobiologie, Centre d'Etude de l'Energie Nucleaire, Mol, Belgium

Anucleate systems are particularly suitable for the role of nuclear genes in cellular differentiation. Moreover, these systems, which can be easily obtained from bacterial, animal or plant cells, enable the investigator to gain more mitochondria freed from the direct control of the nucleus.

This two-volume work treats the main aspects of the biology and radiobiology of anucleate systems—i.e., morphogenesis, molecular biology, biochemistry, genetics, ultrastructure, photosynthesis, circadian rhythms, UV, and ionizing radiations effects.

Volume 1/ **BACTERIA AND ANIMAL CELLS**

## INDUSTRIAL ENVIRONMENTAL HEALTH— The Worker and the Community

editor: **LESTER V. CRALLEY**, Environmental Health Services, Aluminum Co. of America, Pittsburgh, Pa.

associate editors: **LEWIS J. CRALLEY, GEORGE D. CLAYTON, and JOHN A. JURGIEL**

Increasing public concern over environmental forces and hazards has led to awareness of the need for improved working conditions in all phases of industry. This book covers both basic research and field studies dealing with all aspects of environmental health, including air and water pollution, as related to industry. It centers attention, however, on evaluating the specific health hazards covered by the Occupational Safety and Health Act of 1970.

1972, about 515pp., \$24.00

## CHRONICALLY IMPLANTED CARDIOVASCULAR INSTRUMENTATION

edited by **ERNEST P. McCUTCHEON**, Univ. of Ky.

This book, based on a symposium held at the University of Kentucky, October 18-20, 1971, reports on the most significant recent advances in cardiovascular research in chronically implanted animals. It brings together previously scattered information on new techniques, as well as improvements in existing techniques. Subjects are discussed from a practical rather than a theoretical standpoint. The book is divided into five main sections—Significance of Chronically Implanted Cardiovascular Instrumentation, Transducer Selections and Properties, Implantation Techniques, Signal Processing, and Future Developments.

3Q1972, In preparation

## ENVIRONMENTAL TOXICOLOGY OF PESTICIDES

edited by **FUMIO MATSUMURA and G. MALLORY BOUSH**, Department of Entomology, Univ. of Wisconsin, Madison, and **TOMOMASA MISATO**, Inst. of Physical and Chemical Research, Japan

**CONTENTS:** Introduction: Patterns of Pesticide Usage and Occurrence of Residues. Mercury Transformation in the Environment. Chlorinated Hydrocarbon Insecticides in the Environment. Fungicides, Herbicides, Organophosphates, and Carbamates. Microbial Influence on Pesticide Degradation. Photodecomposition of Pesticides. Toxic Effect of Pesticide Residues on Wildlife. Design of New Pesticides.

1972, 662pp., \$17.50

We've just opened your field of vision.

Now you can scan more than twice the area you could with ordinary, wide-field eyepieces. Olympus' new Super Widefield optical system gives you a clear, crisp view of five field diameters from 0.265mm at 1000x (oil) to 6.63mm at 40x. Scanning time is reduced, and with it, eyestrain and lost motion. Now you see 217% more of the flat field for which Olympus is known.

And, as usual with Olympus, you can add this new capability to your present Olympus EH, FH, EHA or FHA. It takes but a few minutes to install the Super Widefield Eyepieces, binocular or trinocular SW observation tube, SW Condenser and SW Plan Achromat objectives (4x, 10x, 20x, 40x and 100x oil-immersion).

After all, modular versatility is one of the features that opened people's eyes to Olympus in the first place. Send for literature. Write: Olympus Corporation of America, Two Nevada Drive, New Hyde Park, New York 11040.

In Canada: W. Carsen Co. Ltd., 31 Scarsdale Road, Don Mills, Ontario.

## TIME PHOTO-LAB LABELS

Pressure-sensitive Time Photo-Lab Labels provide you with a convenient way to record and store your photo's and slides.

**METRIC SCALE LABELS.** A calibrated scale label of 3cm or 6cm relates size of specimen or subject at a glance. Supplied in convenient rolls with removable adhesive, these convenient labels stick tightly yet won't mar surface when removed.

**TIME INCH SCALE LABELS.** Calibrated scale of 6 inches is imprinted on pre-cut self-sticking labels.

**TIME PHOTO SLIDE LABELS.** Printed with a red dot to assure proper placement in projector or carriage. Available in two sizes for either 2" x 2" mounts or lantern slides.

Write us for free samples and literature on these and other Time Products for the laboratory. We will also send the name of your nearest dealer.

**NOTE: NEW ADDRESS.** We have recently moved into new facilities; enlarged and automated to serve you better.

## BUCHLER INSTRUMENTS FOR MONITORING AND COLLECTING LIQUID EFFLUENT

These components comprise a highly efficient, automatic system for continuous flow, liquid monitoring and collecting. They can, of course, be used separately and in conjunction with other instruments; together they form a Chromatographic system that you can depend on.

(A) **Fractomettte**: compact, 200 tube linear fraction collector

(B & C) **Fractoscan**: double-beam UV photometer that permits use of any wave length in the UV range; output linear in optical density.

(D) **Potentiometric-Servo Recorder**: A reliable recorder with 5" wide strip chart.

**BUCHLER INSTRUMENTS DIVISION**

## Automatically improve your Lab Staff Productivity

The Shandon Elliott 23-station automatic slide staining machine gives you high reproducibility and uniform quality in preparing Pap stains, blood films, bone marrow spreads and tissue sections. Skilled technicians are released for other important work, improving overall productivity.

This slide stainer—holding up to 50 slides—is actually three machines in one: two separate machines operating simultaneously on different cycles, two separate units operating on the same staining cycle at the same time, or as one machine operating on all 23 staining positions. Also available are an 8-station model and a 12-station model.

For more information on these slide staining machines and other scientific instruments contact Shandon Southern Instruments, Inc., 515 Broad Street, Sewickley, Pa. 15143 (Pittsburgh District).

# Concentrate!

20-fold concentration in just 100 min. with new Hollow Fiber Devices

Proteins, viruses, enzymes and other biomolecules can now be concentrated (also desalted or fractionated) quickly and easily with Hollow Fiber Devices. Using the latest in

membrane technology, these unique devices are self-contained and compatible with existing lab equipment. Re-use after a simple wash.

Operation is as simple as it is rapid. Forget about pouring columns and fussing with dialysis bags.

A complete starting set-up costs under \$30. For "how to use" literature with prices, contact:

## Electron Microscopists do important work. They shouldn't spend a lot of time getting everything ready to do it.

Our vacuum evaporators give you precision specimen preparation and replication for electron microscopy.

With very little time and effort on your part.

We have both automatic and manual versions. And all the accessories you need for complete vacuum deposition.

Like rotary coaters and shadowers. Filament and boat evaporators. Carbon rods and sharpeners. Instrumentation feed throughs. And

freeze-fracture devices.

They all help you with your important work by doing more of it for you.

We've been making more kinds of vacuum pumping equipment than anyone else for over 64 years.

And we'd like to tell you in detail about our high vacuum evaporators. Just send for Booklet #3102.

Kinney Vacuum Co.,  
3529 Washington Street,  
Boston, Massachusetts  
02130. Tel. (617)  
522-7100.

**Kinney Vacuum**  
A UNIT OF GENERAL SIGNAL CORPORATION

We spend a lot of time thinking about our vacuum products. So you won't have to.

### Handy helpers

#### Time-It®

Time any program, process or procedure with ease. You can't beat Time-It for accuracy, durability, economy. Second and minute models.

#### Big Jack®/Little Jack®

Sturdy, adjustable platform for flasks, hot plates, etc. Precisely controlled lifting up to 100 lbs. Little Jack for micro and semi-micro work.

#### Handi-Hot Plate

Fully adjustable, thermostatically controlled 110° to 600°F temperature range. Lightweight, portable, and built to last.

#### Mag-Mix®

Great versatility in stirring and agitation of a wide temperature/viscosity range of liquids using choice of encapsulated Alnico magnets.

Get the complete story on these handy helpers. Ask your Precision Scientific Dealer or write us. Precision Scientific Company, 3737 W. Cortland St., Chicago, Ill. 60647.

# If you haven't joined the **MC/B** library,

## you're overdue.

MC/B supplies over 10,000 of the best chemicals around. But MC/B also supplies some of the best literature around. Books, booklets, brochures, leaflets, charts. On general subjects, like lab safety. On abstruse subjects, like electrophoresis. Some of them relate to our products; some to your problems.

We'd like you to decide which you'd like; we'll send them to you, FREE. No obligation.

Because we think it's time you started reading us.

## DENTISTRY

### BIOLOGY OF THE MOUTH

A collection of comprehensive, multi-disciplinary articles dealing with problems of the biology of the mouth and of oral diseases and also the borderlands where fundamental approaches and investigations in physics and chemistry relate to, and can be brought to bear on such problems.

Edited by Philip Person. 320 pages. Electron micrographs and other illustrations. Bibliography. Index. Retail price: \$10. ISBN 087168-089-0.

### ENVIRONMENTAL VARIABLES IN ORAL DISEASE

Twenty-four distinguished scientists present the findings of their research on the role of environmental factors in oral disease. Geographical and clinical considerations; the oral environment-nutrition and dental caries; experimental considerations in oral soft lesions; prenatally occurring influences.

Edited by S. H. Kreshover and F. J. McClure. 328 pages. Illustrations. Bibliography. Index. Retail price: \$8.75. ISBN 087168-081-5.

### MECHANISMS OF HARD TISSUE DESTRUCTION

Forty-nine outstanding scientists in the fields of dentistry, medicine and zoology participate in a multidisciplinary symposium on the destruction of mineralized structures by organisms and physical and chemical agents.

Edited by Reidar F. Sognnaes. 776 pages. 430 illustrations. Bibliography. Indexes. Retail price: \$8.75. ISBN 087168-075-0.

#### Special price offer

All three volumes: \$24.95

When payment is sent with order: \$21.95
