

cal localization of cytoplasmic genes in *Chlamydomonas* as well as recombinational mapping experiments with these genes which have not been published in sufficient detail elsewhere. Many of the generalizations she makes about the *Chlamydomonas* system are open to alternative interpretations and cannot be taken for granted until the data themselves can be analyzed in detailed research papers.

With this exception the book is excellent. It is well illustrated and contains copious references to work both new and old. It also contains a useful appendix describing some of the physical methods used to characterize organelle DNA and a detailed glossary of the terminology used by the present-day "organelle geneticist."

Plant Lipid Biochemistry. The Biochemistry of Fatty Acids and Acyl Lipids with Particular Reference to Higher Plants and Algae. C. HITCHCOCK and B. W. NICHOLS. Academic Press, New York, 1971. xiv, 388 pp., illus. \$19. Experimental Botany.

This is the first book on plant lipid biochemistry in the English language. (An earlier book by Mazliak has not been translated from French.) The emphasis in this new volume is on metabolism, and so the book is complementary to that of Hilditch and Williams, *The Chemical Constitution of the Natural Fats*. It has been the intention of the authors to present a book that will permit a reader, by selective reading, to become familiar with research accomplished in a specific area. This purpose is well served since the book has a massive bibliography. However, the work is much more than a compendium of references: each chapter is readable and clear.

The advantage of having cooperating authors, rather than independent contributors, is apparent. Topics from chapter to chapter are well cross-referenced, there is little repetition, and most topics are discussed. (Terpenoids and steroids are not considered.) There is some unevenness in the treatment of topics; for example, the three chapters dealing with fatty acids, their biosynthesis, and their degradation cover almost 150 pages,

whereas the corresponding three chapters for glycerolipids cover just over 40. At some points useful comparisons are made between the metabolic pathways in plants and those in bacteria and animals, but again these comparisons are more thorough for fatty acids than for glycerolipids.

The chapters on fatty acids are detailed and documented, reflecting the expertise of the authors. The brief chapters on glycerolipids give thorough literature citations; however, the stereochemical numbering system for these lipids could have been used appropriately, and there is an error in the description of bacterial phospholipid synthesis, where it is stated that phosphatidyl ethanolamine is synthesized by way of cytidine diphosphate ethanolamine. Specialists will undoubtedly find arguable points and even small errors, but taken as a whole the book successfully accomplishes its objective.

At several points in the book subjects for future research are noted, and the last chapter gives a survey of methods applicable to the study of lipids in plants. Thus the book is of value to both the practicing and the potential researcher in this field. At the same time it should be a useful supplement to the resources of the plant biochemist or physiologist who wishes to have a ready summary and bibliography of recent work in plant lipid biochemistry.

Books Received

The Acceleration of History. Gerard Piel. Knopf, New York, 1972. x, 370 pp. \$8.95.

Adrenal Steroids and Disease. Cuthbert L. Cope. Lippincott, Philadelphia, ed. 2, 1972. xii, 884 pp., illus. \$32.

The Biological Bases of Behaviour. Neil Chalmers, Roberta Crawley and Steven P. R. Rose, and Judy Hicklin, Eds. Published for the Open University Press by Harper and Row, New York, 1972. 318 pp., illus. Paper, \$6.95.

Biological Science. William T. Keeton. Illustrated by Paula Di Santo Bensadoun. Norton, New York, ed. 2, 1972. xvi, 888 pp. \$11.75.

Cytochromes. Current Research I. Papers by Yoshiyuki Ichikawa, Toshio Yamano, Richard Di Augustine, James Fouts, et al. MSS Information Corp., New York, 1972. 244 pp., illus. \$15.

The Desert World. David F. Costello. Crowell, New York, 1972. viii, 264 pp., illus. \$7.95.

Design of On-Line Computer Systems.

Edward Yourdon. Prentice-Hall, Englewood Cliffs, N.J., 1972. xvi, 608 pp., illus. \$16.

The Electronic Structure of Atoms and Molecules. A Survey of Rigorous Quantum Mechanical Results. Henry F. Schaefer III. Addison-Wesley, Reading, Mass., 1972. x, 438 pp., illus. \$7.95.

The Evolution of Primate Behavior. Alison Jolly. Macmillan, New York, 1972. xiv, 398 pp., illus. Paper, \$4.25. Macmillan Series in Physical Anthropology.

Feeding the World of the Future. Hal Hellman. Evans, New York, 1972 (distributed by Lippincott, Philadelphia). 224 pp., illus. \$4.95.

Fiber Optics. M. P. Lisitsa, L. I. Berezhinskii, and M. Ya. Valakh. Translated from the Russian edition (Kiev, 1968). Israel Program for Scientific Translations, New York. viii, 272 pp., illus. \$20.

Government Regulation of the Computer Industry. Bruce Gilchrist and Milton R. Wessel. American Federation of Information Processing Societies Press, Montvale, N.J., 1972. x, 248 pp. \$12.50.

Handbook of Neurochemistry. Vol. 7, Pathological Chemistry of the Nervous System. Abel Lajtha, Ed. Plenum, New York, 1972. xxiv, 676 pp., illus. \$35.

Heat Transfer. F. J. Bayley, J. M. Owen, and A. B. Turner. Barnes and Noble, New York, 1972. xvi, 438 pp., illus. \$16.50. Applications of Mathematics Series.

Inhibition and Learning. A conference, Sussex, England, Apr. 1971. R. A. Boakes and M. S. Halliday, Eds. Academic Press, New York, 1972. xvi, 568 pp., illus. \$22.50.

Insulin Action. Proceedings of a symposium, Toronto, Oct. 1971. Irving B. Fritz, Ed. Academic Press, New York, 1972. xx, 610 pp., illus. \$17.50.

Kirk-Othmer Encyclopedia of Chemical Technology. Index to volumes 1-22 and Supplement. Herman F. Mark, John J. McKetta, Jr., Donald F. Othmer, and Anthony Standen, Eds. Interscience (Wiley), New York, ed. 2, 1972. lvi, 418 pp. \$50; by subscription, \$40.

Man into Superman. The Startling Potential of Human Evolution—and How to be Part of It. R. C. W. Ettinger. St. Martin, New York, 1972. viii, 312 pp. \$8.95.

Methods of Modern Mathematical Physics. 1: Functional Analysis. Michael Reed and Barry Simon. Academic Press, New York, 1972. xviii, 326 pp., illus. \$12.50.

Molecular Reactions and Photochemistry. Charles H. DePuy and Orville Y. Chapman. Prentice-Hall, Englewood Cliffs, N.J., 1972. x, 150 pp., illus. Cloth, \$10.95; paper, \$5.95. Prentice-Hall Foundations of Modern Organic Chemistry Series.

Molecular Studies on Halogenated Deoxynucleosides. Papers by C. C. Huang, John Coleman, Annette Coleman, Elizabeth Hartline, Robert Lasher, Robert Cahn, et al. MSS Information Corp., New York, 1972. 256 pp., illus. \$15.

The Moscow Puzzles. 359 Mathematical Recreations. Boris A. Kordemsky. Martin Gardner, Ed. Scribner, New York, 1972. x, 310 pp., illus. \$10.

The New Guide to the Planets. Patrick

Moore, Norton, New York, 1972. 224 pp., illus. \$7.95.

The 1970 National Power Survey. Federal Power Commission, Washington, D.C., 1971 (available from the Superintendent of Documents, Washington, D.C.). Part 2, variously paged, + fold-out maps. Paper, \$6. Part 3, variously paged, + fold-out maps. Paper, \$5.25. Part 4, variously paged, illus. Paper, \$4.

Optical Transforms. H. Lipson. Academic Press, New York, 1972. xii, 436 pp., illus. \$22.50.

Organic Chemistry of Nucleic Acids. N. K. Kochetkov and E. I. Budovskii, Eds. Translated from the Russian edition (Moscow, 1970) by Basil Haigh. Translation edited by Lord Todd and D. M. Brown. Plenum, New York, 1972. 2 vols. Part A, xvi pp. + pp. 1-268, illus. \$19.50. Part B, xvi pp. + pp. 269-640, illus. \$23.50.

Organic Peroxides. Vol. 3. Daniel Swern, Ed. Wiley-Interscience, New York, 1972. xii, 384 pp., illus. \$24.95.

Perception. Mechanisms and Models. Introductions by Richard Held and Whitman Richards. Freeman, San Francisco, 1972. viii, 390 pp., illus. Cloth, \$12; paper, \$5.95. Readings from *Scientific American*.
