

cerebral endings of the analyzer systems represents a physical basis of the diverse grades of transfer from actual sensory perception and impressions to abstract-logical forms of concepts of reality and behavior patterns." Such are the phrases that allegedly bring us "closer to the solution of the cardinal question posed by Pavlov: what is the fine structure of the analyzers, and how do their various components interact?"

Morphogenesis in Insects

Biochemical Aspects of Insect Development. P. S. CHEN. Karger, Basel, 1971 (U.S. distributor, Phiebig, White Plains, N.Y.). viii, 230 pp., illus. \$17.30. Monographs in Developmental Biology, vol. 3.

Recently developmental biologists have increasingly recognized the opportunities for genetic analysis of development afforded by that genetically best-known of all animals, *Drosophila*. At the same time, research on endocrine aspects of insect development has burgeoned, spurred in part by the encouraging possibility that hormone mimics may be valuable in the selective control of insects. A book on the biochemistry of insect development is therefore welcome, and P. S. Chen, an active contributor to this field for the past two decades, is well qualified to provide it. This concise volume takes up insect development stage by stage—embryo, larva, metamorphosis, adult—reviewing the biochemical knowledge of each, and concludes with a chapter on genetically based studies. The book is generally up to date and, with a bibliography of more than 900 titles, is a valuable source for the literature of the field. Endocrine aspects receive little emphasis, which is appropriate in view of the existence of several current reviews on insect hormones, and genetic aspects, in which the author has special interest, are emphasized. Although in this field of research, as in others, many investigations have suffered from technical inadequacy, many premature conclusions have been drawn, and many inferences have been legitimately revised in the light of new discovery, Chen studiously refrains from criticism and value judgment. This seems a pity

—some guidance through the jungle of papers, and personal opinion from an experienced worker, would have been welcome. Also a little disappointing is the limited amount of new interpretation and synthesis. Perhaps the boldest broad conclusion is the rejection of any massive alteration of the protein pattern at metamorphosis. Chen does not accept the concept, put forth by others, of gene-set switchover at metamorphosis. "Even in the higher Diptera, which have the most complete metamorphosis, the data do not imply a switchover from a larval set of genes to an adult set" (p. 96). Changing gene expression during development could be called the theme of this book, but Chen believes that the evidence indicates a less extensive and more gradual change in pattern of gene expression than has sometimes been assumed. This reviewer found the final chapter, on biochemical analysis of developmental mutants (chiefly *Drosophila*), the most interesting. Modern methods of nucleic acid and protein research are now being applied to this material, and significant results for developmental biology are to be expected.

The volume is regrettably expensive for its size, and would have benefited from better proofreading.

The J.T. Baker catalog lists over 80 products for liquid scintillation counting

J. T. Baker liquid scintillation products are "use-tested" by liquid scintillation spectrometry. Lot-to-lot uniformity is determined by calibration against NBS radiochemical standards.

Key solvents in liquid scintillation grade include:
1,4-Dioxane and Toluene

Also available are important solutes, such as:

2,5-Diphenyloxazole (PPO)
4,4'-Diphenylstilbene (DPS)
2-(1-Naphthyl)-
5-phenyloxazole (α -NPO)
2,2'-p-Phenylene-
bis(5-phenyloxazole)
(POPOP)
p-Terphenyl (p-TP)

For these products and more than 5,000 other chemicals, see our new Catalog 700 . . . the most complete guide to materials for critical laboratory applications.

SOLAR BLIND
PHOTOMULTIPLIERS**

Now available from EMI—a range of high gain, low dark current photomultipliers with windows and cathodes suitable for use in the ultra-violet region. Available window materials include: quartz, sapphire, magnesium fluoride, and calcium fluoride. Cathode materials include: cesium telluride, rubidium telluride, cesium iodide, potassium bromide, and copper chloride. For many applications, these tubes are superior to the method of using wavelength shifters, and have the further advantage of being solar blind (Insensitive to visible light). In general because of their inherently low dark current, they will not require cooling. A special housing type E-15 is available for coupling the detector to a vacuum system.

Praise the Lourdes.

Beta-Fuge™

(with patented Continuous Flow System)

This is a centrifuge that has the patented Lourdes Continuous Flow System. A System that offers you simpler operation. Faster separation of solids from large volumes of liquids. Here in ml per minute are some of the flow rates you can achieve: Yeast cells 500. Bacterial Culture 200. E Coli 350.

This is also the centrifuge with up to 40,300xG; up to 4 litre capacity with fail-safe brush life control; sliding top door for easy loading, automatic solid state speed control, temperature control -20° C to +40° C.

Lourdes' Beta-Fuge. You ought to look into it. Write Vernitron or contact your local dealer.... today. And you, too, will praise the Lourdes.

**But nobody
clips coupons.**

You can't find a scissors. Your secretary is out to lunch. And besides, coupons are a lot of trouble. Too bad.

Our brochure (what you get for the coupon) proves how an automatic watering system for animals can cut 30% off animal care costs in most facilities. For the typical 5000 cage lab that comes to about \$20,000. Every year. And because these savings are proportional, Hardco equipment offers substantial cost reductions to any facility, large or small.

Our brochure also clearly explains why automatic watering is actually better for your animals. And as proof we'll list more than 500 labs across the country where it is working and working well. Quite a lot for the price of a stamp.
