SCIENCE 13 October 1972 Vol. 178, No. 4057

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

THINK SMALL.

The LKB Microcalorimeter adds a new dimension to your research. It measures extremely small amounts of heat. This gives you the opportunity to determine fundamental thermochemical properties such as enthalpy and entropy on the basis of the heat generated or absorbed in a biological or biochemical reaction. You can also use the heat measurement for analytical purposes, or for the determination of overall levels of metabolism.

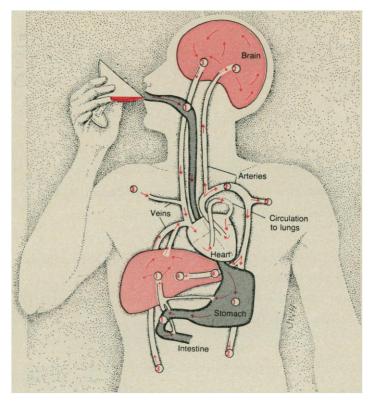

Some examples of applications of the LKB Microcalorimeter are: determination of bonding energies and stability constants for protein-protein interactions; studies of the overall metabolism of microorganisms and its relation to growth and respiration; studies of the metabolism of bacterial cultures and its correlation with specific protein synthesis; measurements of blood metabolism, for diagnosing thyroid dysfunction.

The commonly available heat in biological reactions has been disregarded as a parameter for analysis, due to the lack of reliable, simple-to-operate instruments. However, now that such instruments are available you really have the possibility of gaining an insight into a number of processes which have, so far, been difficult to measure in a direct fashion; for example, enzyme activity measurements on cell or tissue suspensions.

Please send for information giving an indication of your field of interest.

The reality break

What happens when somebody takes a drink...or a drug? How is modern technology upsetting the ecological balance? Is man beyond natural selection? When biology can answer questions like these, a required course can open up a whole new world to the non-science major.

CONTEMPORARY BIOLOGY is a new text for non-science majors taking their only course in biology. Dr. Mary Clark outlines basic biological facts, and applies them to current public health and environmental problems. Students get the relevance they want—along with the biology they need to understand it.

The text is written with remarkable clarity, minimal repetition, and just enough depth to hold student interest...lavishly illustrated on nearly every page...flexible enough for a course of any length...and carefully edited to ensure accuracy unmatched by any other text for non-majors.

CLARK: Contemporary Biology

By Mary E. Clark, Ph.D, San Diego State College • About 650 pages, 600 illust. • Ready March

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

Stridulatory file (scanning electron micrograph) of Uhler's katydid. The file is on the underside of the left forewing. Here the forewing is ventral surface up; the 134 file teeth form a 2.8-millimeter row curving posteriorly from lower left to upper center. See page 174. [Insect Attractants, Behavior and Basic Biology Research Laboratory, U.S. Department of Agriculture, Gainesville, Florida; courtesy of P. S. Callahan and T. Carlysle]

If he's not one of our computer salesmen, that's the one thing he probably won't bring up.

Because he probably can't bring anybody over to do it for you.

But we can.

And we will.

And we'll bring over all the modules (including special modules), labs, wire wrap service, cabinets, hardware, assembled logic arrays, terminals and technicians it takes to do the job.

For us it's easy, because our Logic Products Group makes it all themselves, or gets what they need from one of our other groups, so it all fits together when it gets there.

When you buy a computer the hooker in the deal can be "Who's going to hook it up?"

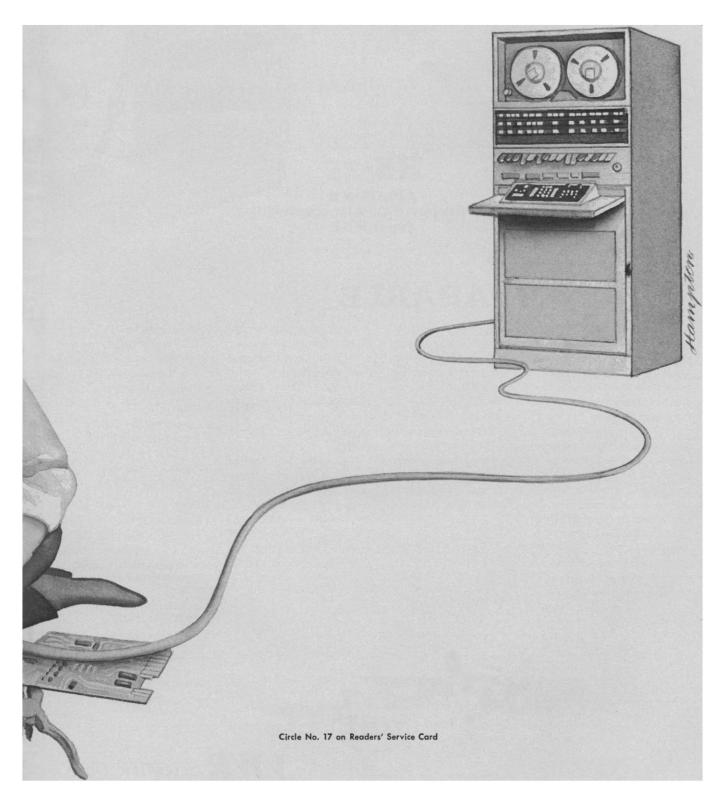

We can do it because we've had, we've got, and we keep getting the kind of designers, engineers and logic people it takes to make and market more kinds of computers, and everything it takes to make a com-

puter work right, right from the start, than any other computer company in the world.

We're the Logic Products Group, Digital Equipment Corporation, Maynard, Massachusetts 01754/(617)897-5111 (Ext: 2785) in the U.S. 81 route de l'Aire, 1211 Geneva 26/(022) 42 79 50 in Europe.

digital

INCOMPARABLE

Nothing on the market is like the HS-25. Capable of density gradient separations up to 110,500 x g. it can handle many tasks usually requiring ultracentrifuges costing more than twice as much.

A highly efficient refrigeration system (hot/cold cycle) together with automatic air evacuation of the rotor chamber provide precise electronic temperature control. Accurate sample temperature can be maintained down to -10° or up to +40°C.

An automatic electro-mechanical overspeed protection system prevents the operator selecting a speed that exceeds the rated maximum rpm of the rotor. If an excessive speed is inadvertently selected-the HS-25 stops automatically.

For maximum user convenience, polycarbonate tubes with screw-on aluminum caps eliminate multi-component sealing assembliesreduce loading and unloading time by 80%.

A built-in program for zonal centrifugation, using any of three zonal rotors developed from the original design of Dr. N. G. Anderson, permits fractionation of relatively large volumes (up to 1 g of material) of particles as small as RNA.

We'll show you how to lower the cost of sophisticated separations with the unique 110,500 x g HS-25. Call your nearest VWR Scientific office, or write VWR Scientific, P.O. Box 3200, San Francisco, California 94119.

Specifications: HS-25 (VWR No. 20635-005)

- Maximum Speed-25,000 rpm.
- Maximum RCF-110,500 x g.
- · Choice of 11 rotors:

5 Angle

8 x 50ml-75,400 x g 6 x 250ml-33,400 x g 16 x 15ml-75,400 x g 6 x 100ml-76,900 x g 10 x 100ml-26,600 x g

3 Swing-out

4 x 20ml-89,300 x g 4 x 60ml-31,600 x g

6 x 15ml*-110,500 x g

*Accommodates long, thin tubes ideal for density gradient work.

3 Zonal Rotors-(BXIV, BXV, BXXIX).

*Plus electronic speed and temperature control, program preselection and a unique overspeed protection system.

*Occupies only 26" x 31" floor area.

The JSM-50A. Compare all one. The JSM-50A is a unique instrument. Just as unique, in fact, as you want to make it. We've based the design of the 50A on a system of solid state modules. They combine to make a versatile scanning electron microscope as well as a sensitive microprobe.

The 50A offers a continuously variable 0-50kv accelerating range. 100Å resolution is routinely guaranteed and featured are interchangeable lanthanum hexaboride and tungsten filaments.

The x-ray analysis system allows the use of three spectrometers. There's complete digital control of spectrometers and full computer addressing of crystals. Light optics permit tracing of the beam during x-ray analysis. Accessories include direct stereo viewing and color presentation of x-ray signals. The lanthanum hexaboride gun provides a brighter beam for high resolution at low accelerating voltages for biological applications, plus a richer x-ray signal at all accelerating voltages. ☐ All go to make the 50A unique. They also make it a number of instruments when you require them. Circle No. 28 on Readers' Service Card Our JEM-100B. The new standard of comparison. No other electron microscope offers the sophistication of our 100B. This high performance instrument routinely demonstrates better than 2Å resolution, a 0.1Å per minute contamination rate, yet is extremely simple to operate. It's highly automated with a prealigned column. □ Options include full scanning, scanning transmission (STEM) capabilities and two new electron guns — "cool" beam and field emission. ☐ The 100B and its host of options may be seen at our demonstration centers throughout the world. There you'll find an instrument that offers the maximum in performance and versatility today with tomorrow's capabilities already being perfected. Our 100B—the standard of comparison for today and tomorrow. ☐ Learn more about the 50A and the 100B from JEOL, 477 Riverside Ave., Medford, Mass. 02155. (617) 396-6021. We've improved our 4x5 films so much

Obviously, this extraordinary offer is a result of changes in our 4x5 films.

We've made complex changes. Chemical adjustments in our black and white films have improved their quality and sensitometry.

And we've made simple changes—such as venting the color film packet to let air escape when you pull the packet out of the holder. This change improved the

film's color saturation and sharpness.

We've even changed the box drastically. We found that the film was being blamed for troubles that were really due to dropping the box or to vibration, rough handling or accidental pressure.

So we've introduced extra-sturdy boxes and put a three-eighths-inch layer of polyurethane foam in each to protect the film. While we were at it, we color coded the new boxes. Now you can tell at a glance which of the five films you're working with.

We made mechanical changes in the film packet so

that all the film components stay in register till exposure.

We have made improvements in the production process and tightened quality

that now we can guarantee your results.

We are very confident of the quality of our film—so confident, that here's what we're offering.

Polaroid's extraordinary guarantee:

1. If in your judgment any picture taken with our 4x5 film is unsatisfactory for any reason whatsoever, we will replace up to 5 boxes—free.

We will give you—also free—all the technical assistance you need to get exactly the kind of pictures you want. Just send the pictures with the negatives and any unused film from the box to Polaroid's Cus-

tomer Service Dept., Cambridge, Mass. 02139. (Pictures submitted for replacement cannot be returned. Offer does not apply to outdated film and is limited to film sold in the U.S. It expires Dec. 31, 1972 and is void

where prohibited, regulated or taxed.)

3. You can call us collect. The toll-free phone number is 617-547-5176, and it's in every box if you need it. This direct line to Polaroid for technical assistance is available to you as often as you wish, regardless of the kind of camera or equipment you own or the type of Polaroid instant films you are using.

You'll find the full details of this program in every box of Polaroid 4x5 film.

We've been working hard to perfect our films. And we want to do anything we can to help you perfect your skills. Polaroid 4x5 Land Films

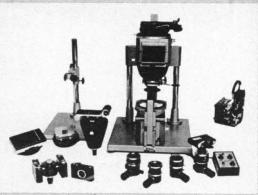

From diatoms to the gross or fine structure of a maple leaf, the Nikon System of micro/macro photography records the microscopic image with the photographic excellence of the world famous Nikon F camera system.

Attach our completely automatic Auto Microflex AFM unit to any microscope. Its solid state analog computer control guarantees perfect photomicrographs every time. Use the Multiphot, our large photographic stand. It's the ultimate for micro and macroscopic photography.

Then there are Nikkor and Nikon lenses, a choice of camera backs from 35mm micro/macro to 4x5" and attachments to fill every micro/macro and cine photography requirement.

With Nikon Systems, you can take a picture, any picture, from 1x to 2000x. Write for our 10 page color catalog on Photo/Cine Micrographic Equipment. Nikon Inc., Instrument Div., Subs. Ehrenreich Photo-Optical Industries, Inc., Garden City, N.Y. 11530. (In Canada: Anglophoto, Limited, Ontario)

Nikon System of Photomicrography and Photomacrography

The Nikon system: everything from amoeba proteus to lunar rock.

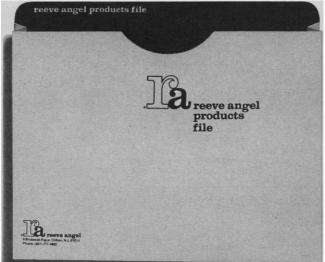

YOUDON'T KNOW ABOUT REEVE ANGEL COULD BE ENOUGH TO FILL

And that's precisely what we've done. It's called the Reeve Angel Products File, and it's designed to bring you up-to-date on the entire Reeve Angel product line... from our standard products for routine filtration and analysis, through our newest products for high resolution electrophoresis and high pressure liquid chromatography.

Here, in one convenient file, you'll find all of the detailed technical information you'll need to select and use the Reeve Angel products that are right for your specific applications.

Whether you are interested in filtration, chromatography or electrophoresis...narcotics screening, diagnostic testing or lead poisoning analysis... you'll find it in the Reeve Angel Products File.

Below is a brief outline of the products and information you will find in this handy reference:

Reeve Angel Laboratory Filter Papers Reeve Angel Cellogel

cellulose acetate gel medium for electrophoresis and immunodiffusion Reeve Angel High Performance Liquid Chromatography Columns and Packings Pellidon, Pellumina, Pellosil and Pellionex

Reeve Angel Peristaltic Pump
Reeve Angel Spin Thimbles

an entirely new concept in elution by centrifugation

SA-2 Ion Exchange Resin Loaded Paper designed specifically for narcotics screening and lead poisoning analysis Reeve Angel Glass Fiber Filter Papers ideal for air pollution monitoring ... and much, much more.

Read this and if it isn't enough reason to use our NCS[™]

NCS Solubilizer is a solution of quaternary ammonium bases in toluene which was developed by Amersham/Searle research to solubilize biological samples for liquid scintillation counting. It's literally as easy to use as "ABC."

Add sample and NCS to the counting vial (usually 4-6 parts NCS to 1 part sample).

Bring temperature to (but not exceeding) 50°C until the sample is digested.

Cool and add scintillator solution.

NCS possesses the remarkable ability to

solubilize a variety of biological samples and aqueous solutions in toluene cocktails.

Results of tests on whole tissue, tissue homogenates, blood, plasma, purified protein, nucleic acids, and salt solutions show that the use of NCS results in considerably - and consistently-higher figures of merit (counting efficiency times sample weight) than the use of other digestion reagents or procedures.

Thanks to the ever-increasing acceptance of NCS and the even more sophisticated production techniques currently being used, we can now offer this exceptional product at a significant price reduction. See for yourself:

8-channel recorder with preamps in a single box.

It's the Brush 481. For about \$1000 less than the same components bought separately.

It gives you Brush quality. And Brush innovations. For example: pressurized inking system that writes dry and eliminates smudging, puddling and priming. And Metrisite® non-contact servo-loop feedback device that guarantees 99.5% linearity.

You also get 12 pushbutton chart speeds, from 0.05 to 200mm/second. 40 Hz full scale frequency response. And the built-in preamps provide a measurement

range of 1mV/div to 500 V d-c full scale. With differential, balanced and floating inputs and high common mode rejection.

Finally, you get your choice of either a compact portable or rack mounted version—and accessories like chart take-up reel and Z-folder.

The only thing missing: the problems of separate preamps.

You'll certainly want more information. So contact Gould Inc., Instrument Systems Division, 3631 Perkins Avenue, Cleveland, Ohio 44114. Or Rue Van Boeckel 38, Brussels 1140 Belgium.

SCIENCE FOR SOCIETY

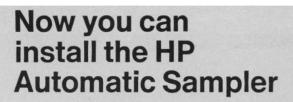

A BIBLIOGRAPHY (THIRD EDITION)

This 103-page collection, containing nearly 4,000 references, is a comprehensive and up-to-date reference work on books, journals, articles and other literature concerned with issues of science and society. The bibliography is primarily designed for use in physical science and social studies courses in high schools and colleges. It is useful to both scientists and laymen concerned with this subject. Prepared by Howard T. Bausum.

The bibliography is priced at \$1.00 per copy, or 75¢ each for ten or more copies.

...the reliable one...

on most popular makes of gas chromatographs

More than a thousand labs have already taken a dramatic yet inexpensive first step toward automation by installing the 7670A/7671A Automatic Sampler on their HP gas chromatographs. New low-cost adaptor kits now extend the benefits of the HP Automatic Sampler to most other popular makes of GC's.

There are three good reasons why you should consider making this step too. First, the 7670A/ 7671A completely automates the injection of as many as 36 consecutive samples, letting you operate your GC completely unattended overnight and on weekends, more than tripling its output. Second, the Automatic Sampler is consistently more precise in measuring sample volume and injection time than even a very careful skilled technician. Finally, the 7670A/7671A has been proved in scores of laboratories around the world to be an amazingly reliable precision instrument, even when it is used around the clock. In our own laboratories, we have demonstrated that it is capable of operating reliably for 40,000 injection cycles-the equivalent of more than two years of continuous use-without serious malfunction or deterioration in precision and with amazingly little wear.

HP Automatic Samplers cost \$3250 and are installed directly on most HP GC's. Adaptor kits for most other popular makes cost \$100 to \$200 depending on GC model. For complete information, call your nearest HP sales office or write for literature. Hewlett-Packard, Route 41, Avondale, Pa. 19311. In Europe: 1217 Meyrin-Geneva, Switzerland.

BIOTRAN... the Automated Colony Counter with "on-the-spot" verification

It is now possible to count bacterial colonies, plaques and particles at rates up to 500 plates per hour—and to automatically verify the count. Just place the petri dish on the stage, press the "read" button and the precise number of colonies is instantly displayed on a digital read-out. To verify the count, a TV monitor marks each counted colony with a white spot, showing that the entire population has been accurately counted. A high resolution vidicon system scans the plate to count a broad range of colonies in petri dishes up to 100 mm in diameter. By adjusting a size control, the BioTran distinguishes between bacterial colonies and smaller particles, ignoring the erroneous matter. The

instrument will count colonies as small as 0.2 mm with spacing as close as 0.5 mm on a variety of different agar preparations. Low contrast colonies that are difficult to discern can be reliably counted with push-button ease...even by an untrained operator.

Look into the BioTran . . . you can count on it.

Worthington's high-purity blood fractions.

Human blood has several fractions of intense interest to immunologists and clinical researchers. Responding to this interest, we turned certain of our more sophisticated purification techniques to the problem and came up with a selected group of products obtained from human blood. Six of these – Alpha-l-antitrypsin, Carbonic anhydrase B and C, Gamma globulin G heavy and light chains, and Plasminogen - are offered commercially for the first time. Others, Gamma

globulin G and Albumin, are offered in purities and homogeneities surpassing all other preparations previously available. Pictured above are crystalline Fc fragments from pooled human gamma globulin.

Such purification is achieved through the use of such advanced techniques as ion exchange gel permeation and affinity chromatography, expertise we have gained through years of preparing

high-purity research enzymes.

The blood fractions are fully characterized through disc gel electrophoresis, ultra-centrifugation, and amino acid and immunochemical analysis. Together, they provide the researcher with new tools for investigations in such dynamic fields as immunology and blood component therapy.

Anyone who can read the alphabet can put our pure water cartridge system together.

Our system is made of eleven different cartridges that simply drop into holders that fit together to remove as many as eleven kinds of impurities.

Like organics and chlorine.

Metallic cations.

Anions.

Ionized impurities.

Dissolved oxygen.

Colloidal impurities.

And particulate matter down to 10 microns. 1.2 microns. 0.45 microns. And 0.22 microns.

To handle volumes up to 60 gallons an hour and operate at pressures to 100 psi.

So you can put together exactly the kind of pure water system you want by putting together the different cartridges you need.

Because they practically snap together, you can add on extra cartridges anytime you want. As well as accessories like purity and flow meters.

So you don't have to buy a lot of water equipment you don't really need.

Circle No. 15 on Readers' Service Card

Until you need it.

If that's as important to you as the quality of water you use, ask for our complete Pure Water Cartridge System Catalog.

It will tell you more about our easy-tochange cartridge systems, and more about us.

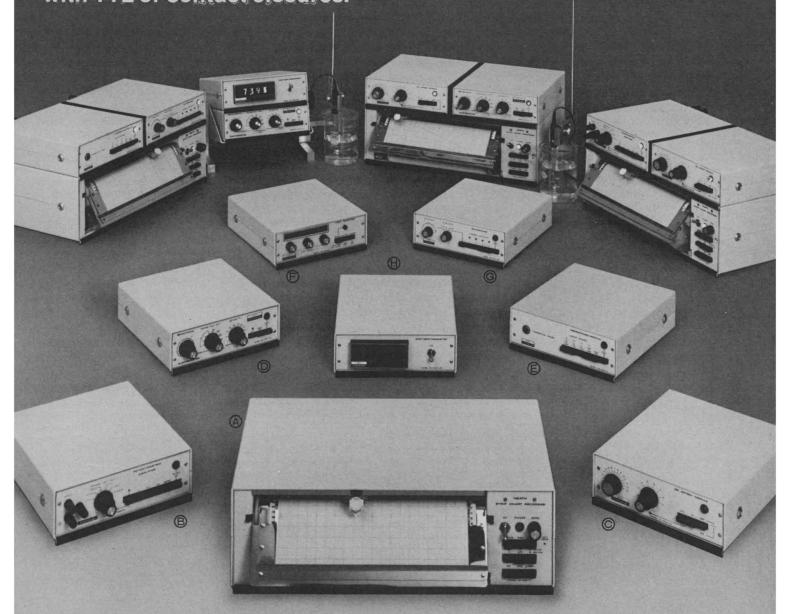

Barnstead.

The people who know everything you need to know about pure water.

225 Rivermoor Street, Boston, Mass. 02132

The new Heath/Schlumberger "200-System" lets you measure voltage, temperature, pH, plon, record with inch or centimeter calibration at any of 23 speeds, read out digitally, drive a printer, amplify your input, detect voltage limits and control external devices, offset your signal, multiplex channels of information... and you can bench, rack or gimbal mount the instruments and completely control them from external devices with TTL or contact closures.

±0.01°C temperature regulation and point-to-point uniformity... remarkable and routine

In viscosity and specific gravity measurements, biochemistry and kinetic studies, physical chemistry experiments, and other exacting laboratory tasks, precision temperature regulation is an unquestioned essential.

However, obtaining such regulation without a great deal of fuss and trouble is another story. "Utility" water baths are too imprecise. Homemade bath apparatus usually requires valuable time and effort for setups. Custom and special purpose baths can be unduly expensive.

That's why Sargent-Welch set out to build a water bath in which precision temperature regulation is routine performance—something to be expected under all normal circumstances and to be obtained with minimum effort on the part of the user.

And that's what we have achieved with our Thermostatic Water Bath. As we state above, it offers a temperature regulation and point-to-point uniformity of ±0.01°C—as measured by an NBS Certified Beckmann Thermometer.

That's standard performance—without special accessories—under normal laboratory working conditions.

The central tower...key to bath performance

The basis for this remarkable performance is a unique Sargent-Welch innovation in bath design. We call it the central tower.

Instead of placing the stirrer at the bath edge and the heaters at the bath bottom in the usual manner, our engineers have placed them in

a specially-designed, centrally-located housing shown below.

In our central tower design, circulation is achieved by a powerful turbine impeller which takes in bath fluid at the bath bottom and expels it through a 360° array of openings at the top.

The result is a toroidal pattern of circulation in which the entire volume of bath fluid is constantly overturned at a rapid rate and without surface turbulence.

In addition to being the pattern least restricted by bath loading, toroidal circulation offers a number of other distinct advantages:

Thermal stratification within the bath fluid is eliminated.

Circulation past the heaters is at maximum velocity to minimize overheating of both the bath fluid and heaters.

Rapid fluid flow from the heaters to the thermoregulator reduces the time lag between heat input and detection.

Fluid replacement at the liquid surface and the

bath walls is so rapid that temperature change through heat loss per unit volume of fluid, is at a minimum.

The thermistor

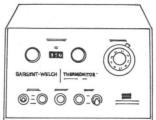

As a further step in achieving precision performance, temperature sensing of the bath fluid is through a thermistor—a sensitive, non-mechanical device that undergoes a change in electrical resistance with temperature change.

In the total control circuit, the thermistor represents one leg of a Wheatstone bridge. In operation, any change in electrical resistance and subsequent circuit unbalance produces a signal which, when amplified, closes the heater circuit until electrical balance is restored through heat input.

This system is simple, reliable, and extremely accurate.

... and the Thermonitor®

The remainder of the circuitry and operational controls are housed within the Thermonitor—a compact, freestanding unit designed to

make temperature selection and control precise, convenient, and simple.

The Thermonitor offers dial selection of temperature, dig-

ital temperature readout, and a vernier for final precision adjustment to within ±0.01°C. All control switches and pilot lamps are logically-grouped for convenient operation.

And because the Thermonitor is connected to the bath only through an electrical cable, it is never in the way. That's pretty important when you need 360° access to the water bath and an unobstructed view.

Some final touches

To aid in temperature control when working in the difficult near-ambient range, a cooling coil is furnished as standard equipment. We also include a constant level device. And for safety and full visibility, the bath vessel is Pyrex glass.

... and some alternatives

Of course, ±0.01°C precision regulation is not always needed. That's why Sargent-Welch offers such a wide range of water baths for ASTM, serological, general laboratory, and research work.

Large or small, precision control or not-so-precision control, general use or special purpose, we have a water bath to meet your needs.

For information on our complete water bath line, call or write your nearest Sargent-Welch office. 2-215

Fill yourself in on reagents for electrophoresis

In addition to a large list of basic reagents for acrylamide gel electrophoresis, Eastman Kodak Company offers some with very special properties for special applications. For instance:

- A cross-linking agent to form solubilizable gel, N,N'-Diallyltartardiamide (Eastman 11444).
 - By substituting N,N'-diallyltartardiamide mole for mole in place of methylenebisacrylamide, acrylamide gels are formed which are soluble in 2% periodic acid. These gels dissolve in 20 to 30 minutes at room temperature, or in about 10 minutes at 37 C. Gels prepared with this reagent take longer to set (about 1 hour for a 7% gel) than those prepared with methylenebisacrylamide, but otherwise, properties of the gels are similar. [FEBS Letters, 7, No. 3, 293 (1970).]
- A fluorescent dye that stains at neutral pH. 8-Anilino-1-Naphthalenesulfonic Acid Magnesium Salt (East-Man 10990).

This dye rapidly binds with proteins at neutral pH producing a yellow fluorescence. Since acid conditions are not required for staining and destaining protein denaturation is minimal. This visualization technique is useful for preparative electrophoresis, where further study or analysis of the purified proteins is desirable. [Anal. Biochem., 30, 391 (1969) and Neurospora Newsletter, No. 15, 16 (December 1969).]

• A dye for differential staining of DNA and RNA. 1-Ethyl-2-[3-(1-ethylnaphtho[1,2d]-thiazolin-2-ylidene)-2-methylpropenyl]-naphtho[1,2d]-thiazolium Bromide (EASTMAN 2718). This dye is reported to stain RNA bluish-purple, DNA blue, protein red, and is also useful for staining acid polysaccharides. Because of the versatility of this dye by virtue of its differential staining ability, the reagent has been called "Stains-All." [J. Mol. Biol., 41, 139 (1969).] The dye has also been used for estimating lipopolysaccharides. [FEBS Letters, 16, 343 (1971)]

A dye to stain gels for quantitative densitometric analysis. Fast Green FCF (Cert.) (EASTMAN C8686).
 Fast Green FCF is reported to stain a number of acidic or basic proteins for quantitation by densitometry after electrophoretic separation. The stain obeys Beer's law between 150 and 200 μg of protein on 6 mm gels and has a sensitivity comparable to amido black, yet shows no evidence of metachromacy, a drawback of amido black. [Anal. Biochem., 35, 359 (1970).]

Don't overlook EASTMAN Organic Chemicals for the basics, either . . . an assortment of initiators, stains, buffer components, and specially purified monomers. For a complete list, including prices and package sizes, use the coupon below to request Kodak Publication No. JJ-11, Reagents for Acrylamide Gel Electrophoresis. Hewlett-Packard Series 9800. The Name And Number Mean More Than Calculators.

Computing Power Is One Thing.

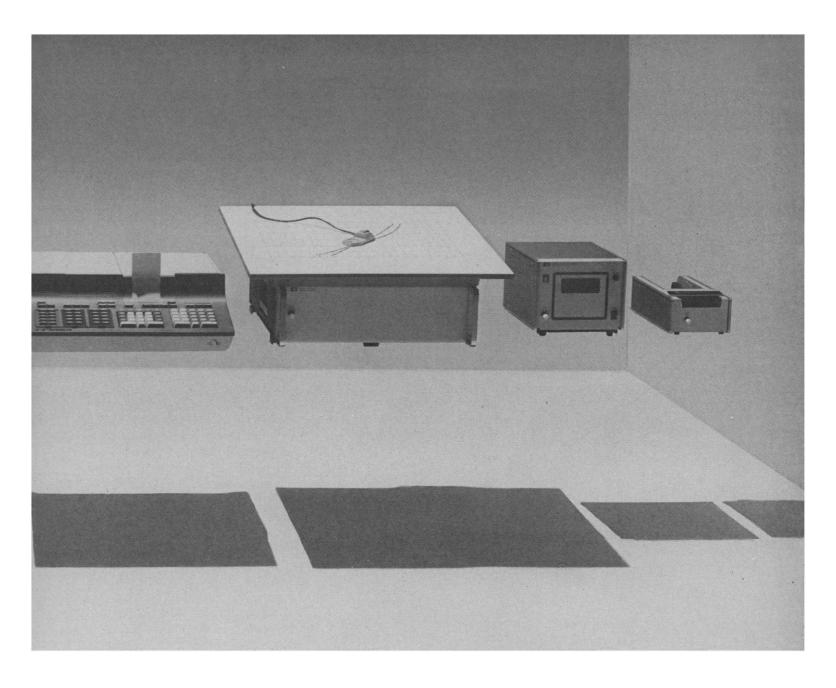

The most striking example of computing power, that we know about, is our

HP-35 Calculator. At nine ounces, this shirt-pocket powerhouse marvelously challenges a computer in handling problems from simple arithmetic to complex mathematics. And costs \$395.

If we can package that much power in a shirt-pocket, imagine what our Series 9800 Model 10 and 20 can do:

Model 10. The one for doing repetitive problems (statistics, quality assurance, or surveying, to name a few). It comes with an LED Display, 50 registers and 500 program steps of memory. Coming in at under \$3,000, the Model 10 can both perform a complete regression analysis, and solve 10 simultaneous equations. You can add

special functions, memory and printer with or without alphanumerics.

Model 20. The one for a lot of onthe-spot programming of complex problems. You get the best of both worlds: Very fast operation internally, with direct communication between you and the calculator. You key in your problem just as you'd write it - in Algebra and English. It gives you instructions and labeled solutions that you readily understand through its unique alphanumeric display and printer. Add to this Model 20's extensive error detecting and correcting features and its whopping memory-and you'll quickly find that it'll take you from concept to solution faster than any other system around.

What's more, with the Series 9800, you're not limited to the data formats of the Calculator. For input, you have your choice of Marked Card Reader, Paper Tape Reader, or Digitizer; for storage, the Tape Cassette; and for out-

put, a Typewriter, or our X-Y Plotter that both draws and writes.

Support Is Another Thing. We're in a unique position to help you. It's the aggregate of our experience in virtually every discipline of science and engineering that does it for us. Not just with products but with people. People like your HP Field Engineer. Chances are, he'll bring the solution to your problems with him. If not, he'll put you in touch with someone who will. The point is, he can talk your language. So you do get the most from your investment. Save time in the beginning. And money in the end.

Service Is A Third. With over 170 field service centers in 65 countries, service is available regardless of where you are. For most, it takes only a phone call.

Product Line Is A Fourth. You probably already know us as one of the world's leading designers and manufacturers of precision electronic measurement equipment. To that end we build over 2,000 products for scientists, engineers, doctors, and businessmen.

Today we're a leader in computing equipment as well. Our line runs from the Model 35 Calculator, right on up to the System 3000, a multi-lingual, multi-programming computer. Between those, and all that goes between, we can help you find the most cost-effective solution to your problems.

For more information or a demonstration of the HP Series 9800, write: Hewlett-Packard, P.O. Box 301, Loveland, Colorado 80537.

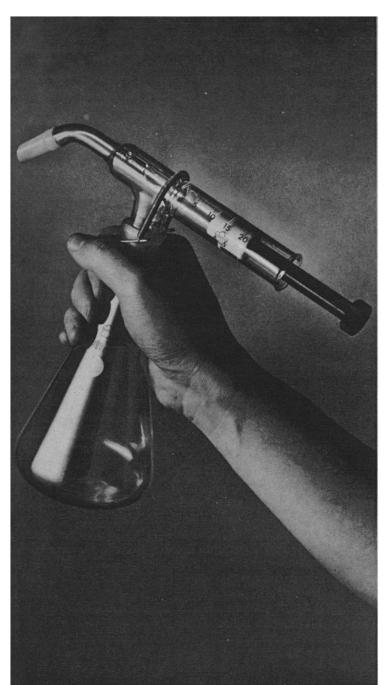

HP sales, service and support in 172 cities in 65 countries.

For laboratories weighing costs as well as samples, a precision top-loader for only \$395.

Adjustable volume dispensingprecise and repeatable

Taking ordinary research apparatus and making extraordinary improvements in them is an everyday objective at Kontes. Here's what we've done lately.

First, a new Adjustable Volume Tilting Dispenser.* Set the plunger for any volume from 5 to 25 ml. Tilt to fill and you get the exact measure you've set each time you dispense. Material to be dispensed comes in contact only with Teflon® and borosilicate glass. The Teflon nozzle tip eliminates breakage and offers better delivery due to its hydrophobic nature. And our new dispenser will fit

any flask having a 24/40 joint.

Second, our new Adjustable Volume Automatic Pipetting Dispensers* These unique dispensers are completely versatile. They're designed for use with disposable glass pipets and they can be calibrated and used with the Kontes pipet as supplied, or with any standard laboratory pipet. Dispense from right angle or straight positions. On both 0-to-1 and 0-to-10 ml models, excellent accuracy and repeatability is assured by the displacement design as well as positive, spring-loaded stop positions. Adapters are available to permit use

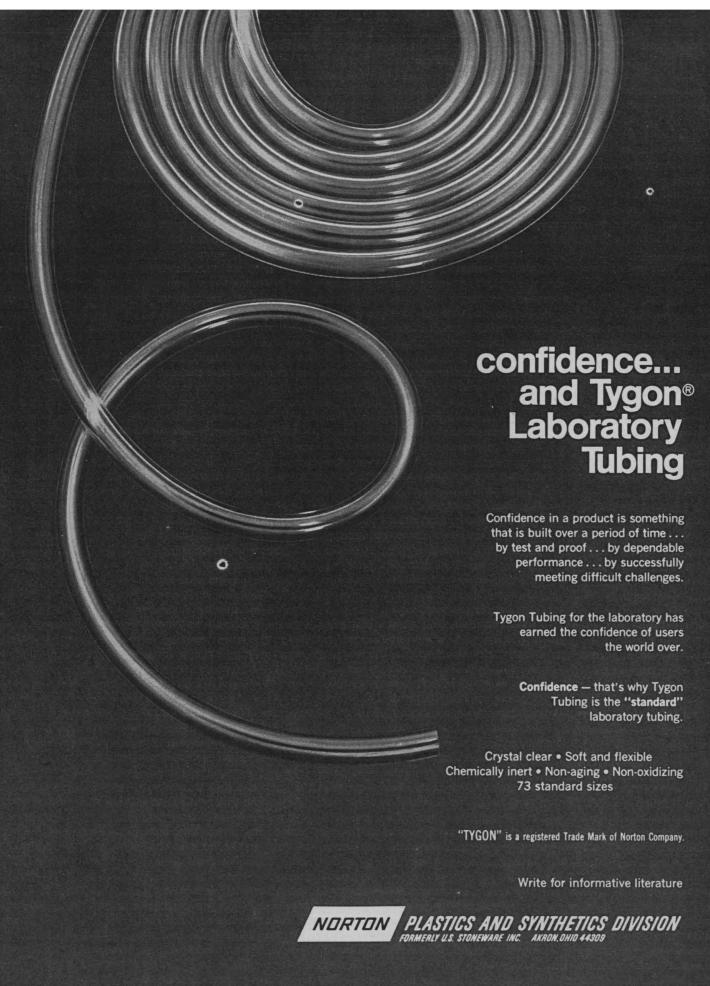

with plastic tips and syringe needles. The dispensers are fully autoclavable and fabricated from inert materials.

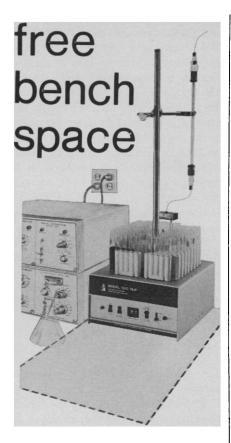

These two new products have been designed to make your dispensing chores easier and more accurate, but they're only two of the over 40 new items in our biomedical line.

They're all described and priced in our new Catalog BMP-10. Contact your Kontes man or write direct for your copy.

Patents Pending

ISCO's miniature fraction collector frees up to 2 or 3 square feet on your lab bench. Newest of the Golden Retriever series, the Model 1200 Pup holds 95 test tubes in removable, self-standing racks of 5 each, yet measures only 9" by 1114"—about the same as this magazine.

Fractions are cut with an electronic digital programmer, counting time intervals from .1 to 99 minutes or 1 to 990 siphon discharges or drops falling past a built-in photocell. The entire shifting mechanism lifts off and can be submerged for cleaning; the electronics remain in the base under a protective shield. A threaded receptacle is provided for an optional 24" stainless steel mast to hold columns or other accessories.

If bench space is at a premium in your lab, use the premium fraction collector: the Golden Retriever Pup. Only \$495.00. For more detailed information on all ISCO fraction collectors, UV absorbance monitors, pumps, and additional instruments for liquid chromatography and other biochemical research techniques, write for our free general catalog.

BOX 5347 LINCOLN, NEBRASKA 68505 PHONE (402) 434-0231 TELEX 48-6453 tional Academy of Sciences, with which Wade disagrees? Why does he mention the packaging industry? Is it because food and chemical companies buy their packages from packaging companies? Or does Wade simply object to companies? A careful examination of any one of Wade's outraged comments demonstrates that they contain much outrage but little substance.

ROBERT E. MACHOL Graduate School of Management,
Northwestern University.
Chicago, Illinois 60611

Nicholas Wade's fascinating report on DES contains a common statistical blunder that should be corrected. Wade writes, "Since some 30 million cattle are slaughtered each year, 1023 is not too healthy a sample from which to draw statistically valid conclusions."

This sentence is puzzling in two small ways: lack of distinction between a sample and its size, and a suggested difference between "valid" and "statistically valid." Its big problem is the assertion that sample size should depend upon population size. Unless sample size gets to be a sizable fraction of population size, the accuracy of inference from the sample hardly depends at all upon population size. A thousand-odd cattle provide for any earthly purpose exactly the same information when the population is 30 million as when it is 3 million or 60 million. What is important is how the sample is drawn from the population, and there Wade appears to be silent.

WILLIAM KRUSKAL

Department of Statistics, University of Chicago, Chicago, Illinois 60637

I could find no substantiation for the headline of Nicholas Wade's report "FDA invents more tales about DES" (11 Aug., p. 503). The report, except for the end of the first paragraph, the third from the last paragraph, and the final paragraph, appears to be a straightforward account of the matter. However, the tone of the report was one of having prejudged the FDA as guilty. Is it expecting too much to look for objectivity in news reporting and headline writing in *Science*?

WARREN A. McMullen Department of Chemistry, Greenville College, Greenville, Illinois 62246

I would like to express my warm appreciation and congratulations to *Science* for the scholarly, well-balanced, and most timely reports on DES and on the Delaney Amendment (18 Aug.,

p. 588). These are two areas of concern that are critical to the protection of large human populations from synthetic chemical carcinogens.

I am unaware of any professional oncologists or scientists competent in these areas, apart from those who have clear economic or other constraints, who would not strongly endorse both the facts and arguments so cogently presented in these two reports.

SAMUEL S. EPSTEIN

School of Medicine,
Case Western Reserve University,
Cleveland, Ohio 44106

The reports by Nicholas Wade dealing with the attempts of the regulatory agencies to cope with the Delaney Amendment are important and timely. Granted that there may be a threshold dose of a carcinogen for an animal, but no one knows how to determine it. This is why the Delaney Amendment should be retained. The use of very large numbers of laboratory animals, as has been proposed, will not solve the problem. Even if the carcinogens selected are appropriate, the results of testing one or several of them in rats or mice, which consume and react for 2 years or so, cannot with surety be extrapolated to man, who can consume and react for 50, 60, or 70 years. Indeed, man's exposure can start in the womb, with the disastrous consequences to some individuals demonstrated by the case of DES, as Wade points out.

The lack of knowledge of the cumulative effects of known carcinogens, let alone of the effect of other compounds and combinations of compounds about which we know little or nothing, is serious. Businessmen and industrial managers are wise in the ways of commerce, but they know little of toxicology, and no more of the even narrower field of carcinogenesis. To entrust to them the decision of whether a new food additive presents a carcinogenic hazard would be folly.

No one questions the use of a lifesaving drug in an emergency situation, even though it might be carcinogenic. However, widespread use of a chemical additive of unproven safety should be discouraged. It is imperative, therefore, that the Delaney Amendment be sustained, subject to intelligent interpretation by the FDA, to minimize the possibility that large populations could be exposed to carcinogenic chemicals.

WILLIAM LIJINSKY

Biology Division,
Oak Ridge National Laboratory,
Oak Ridge, Tennessee 37830

A hard-working liquid scintillation system. Without the hard work.

Introducing the all-new Isocap/300 Liquid Scintillation System. At last, completely automatic, *ultra-simple* analysis of up to 300 samples. For 100% of your counting requirements.

How simple? Just three steps. First, set the program selector cap. Second, set the terminators for time or count conditions (these are the *only* controls you have to set). Finally, push the start button.

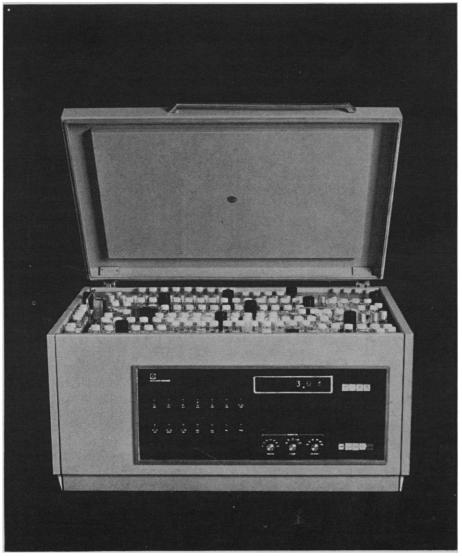

But for all of its simplicity, Isocap/ 300 performs just like those higher priced, "top-of-the-line" systems. Which means fast, accurate data from versatile, applications-oriented counting.

For the full-story of what the Isocap/300 can do, call your Nuclear-Chicago sales engineer. Or write to us. Ask, too, about the PDS/3 Programmable Data System: a new

direction in data reduction (including true-DPM computation) from software to printout.

2000 Nuclear Drive, Des Plaines, Illinois 60018, U.S.A.

Circle No. 22 on Readers' Service Card

This \$650 digital pH meter is guaranteed to pass the acid test.

No drift, no blinking, no fluctuation. Our digital pH meter Model pH-101 costs only \$650, yet it incorporates the very same 0.001 pH sensitivity amplifier used in our famous \$4,000 recording titrators. In our meter, the third decimal place is suppressed to provide a locked-in 0.01 pH readout that we guarantee will be absolutely stable. It won't drift. It won't blink. It won't fluctuate. In fact, the reading will not change at all during the course of any normal procedure, even if observed for as long as half an hour.

Should you require readings to a third decimal place or work with specific ion electrodes, there is our Model pH-102. It has a range switch that permits readings to 0.001 pH/0.1 mV, and costs \$850. Both models give you solid-state circuitry with BCD and recorder output, manual and automatic temperature control, shock-resistant combination glass electrode (which reads accurately with TRIS buffers and requires no alkali correction up to pH 12), stainless-steel rod and mounting hardware, buffers and KCI.

If your pH meter doesn't meet the acid test, why not check ours. For complete literature on both models, just write: Brinkmann Instruments, Cantiague Road, Westbury, New York 11590. In Canada, write:

Brinkmann Instruments (Canada) Limited, 50 Galaxy Blvd., Rexdale (Toronto), Ontario.

The Quest for Environmental Indices

Our indicators of gross national product, cost of living, and unemployment are based on somewhat arbitrary definitions that can produce quite misleading results if their assumptions and limitations are not fully recognized. And yet these measures of the economy are critical factors in both formulating and evaluating economic policy. Despite their shortcomings, they are adequate for their purpose, and their use has improved both policy formulation and the level of political dialogue.

Is it possible to provide a similar set of indices for environmental quality? The Council on Environmental Quality and other organizations concerned with the environment have been grappling with this question. I am convinced that we not only can develop such indices, but that we must if the level of environmental policy and planning is to be improved.

A limited number of environmental indices, obtained by aggregating and summarizing available data, could be used to illustrate major trends and highlight the existence of significant environmental conditions. These indices could provide measures of the success of federal, state, local, and private programs in coping with environmental problems that must be solved.

Many obstacles lie in the path of developing environmental indices. For some aspects of the environment there are conceptual questions that must be answered. For example, we know that land use is a basic component of environmental quality, but at this point it is not clear what aspects of land use we should be measuring.

Good indices depend upon good data, but the environmental data now being collected are deficient in many respects. Inadequate sampling is probably the most pervasive problem. Much of our air pollution data, for example, is based on results from only one monitoring station in each community. It makes a big difference whether that single station is located next to a power plant or on the outer fringes of the suburbs. Similarly, water pollution readings are only rarely adjusted to take into account the location of the stations collecting the data. Another major problem is the excessive length of time between collections of data. Unsatisfactory systems for data storage and dissemination are often notable deficiencies.

Finally, in many cases the scientific knowledge necessary to properly weight the components of an index is lacking. How important is dissolved oxygen compared to turbidity in estimating the quality of our nation's water? How much park space does a typical urban dweller need or want? Until sound standards are set for the major aspects of the environment, a number of somewhat arbitrary assumptions will have to be made in the computation of indices.

Although there are formidable obstacles to the development of environmental indices, real progress has been made in this direction. There has been a marked increase in interest in the subject among federal, state, and local agencies and also within the academic community. The dialogue concerning environmental problems has increasingly been based on empirical evidence instead of on intuitive assumptions or political interests.

Policy-making neither can nor should become totally "scientific." Vital decisions will always depend ultimately on the values we hold and on the way we express these values through the political system. But we must also strive to make maximum use of the scientific evidence available to us, and the development of environmental indices is one important way of doing this.—Russell E. Train, Chairman, Council on Environmental Quality, 722 Jackson Place, NW, Washington, D.C. 20006

New From Klett 4 Vertical Gel Electrophoresis Cells

FEATURES

- * Transparent lucite body.
- * Full view of gel columns during preparation.
- * Full view of dye front.
- * All safety features.
- * Precision ground channels.
- * Leveling legs.
- * Rapid, simple and complete removable of gel columns with spatula.

Klett Manufacturing Co., Inc. 179 E. 87th Street, New York, N.Y. 10028

Don't Measure "Moisture Content" Measure "Water Activity"

"Very often research is slowed down and production is hampered because of lack of appreciation for the behavior of water. Water is probably the most plentiful material on earth, yet it is also probably the most unusual substance."

Thus begins a paper, "The quality of water—the other raw material," by Frank C. Quinn.

Remarking on some of the many uncommon qualities of water and their effect on research and production, the paper covers such topics as total vs. free water effects, equilibrium relative humidity, humidity as a neglected parameter, moisture-humidity hysteresis, total moisture determinations and physical stability of materials in the presence of moisture.

To receive a copy of this paper, write:

SZ-III-Tr...STEREO ZOOM AND PHOTOMICROGRAPHY, TOO!

down-to-earth price.

Zooms smoothly over a 5.7 to 1 range, with no change in focus or working distance. And now it also provides the camera's eye with precisely the same view seen in the stereo eyepieces

High intensity, low voltage light sources are available for reflected and transmitted light. Normally equipped for a magnification range of 7x to 40x; additional wide-field eyepieces and objectives are easily inserted to provide magnification as low as 3.5x or as high as 160x in seven magnification ranges. Fully compatible with the Olympus Photomicrographic Camera System PM-10 or other similar

Photomicrography with a stereo zoom microscope at modest prices... worth looking into! Write:

Olympus Corporation of America, Two Nevada Drive, New Hyde Park, New York 11040.

In Canada: W. Carsen Co. Ltd., 31 Scarsdale Road, Don Mills, Ontario.

β-Diphosphopyridine Nucleotide Nicotinamide Adenine Dinucleotide (NAD)

IN BULK

Users of large quantities of DPN are invited to discuss their needs with Sigma. As the oldest manufacturer of the finest DPN and DPNH in the World, we are in an excellent position to cooperate. Multi-Kilo quantities can be shipped immediately from our ample stocks.

PRICES—Can be negotiated for both auto analyzer and research grades in bulk.

PURITY—We offer several grades to suit your satisfaction.

GRADE V

This is a careful small-batch repurification of our well known Grade III. Minor impurities are reduced to eliminate the reported 'enzyme lag."

Ref. 1. Dalziel, K. J. Biol. chem., 283, 1538 (1963) 2. Winer, A.D., J. Biol. chem., 239, PC 3598 (1964)

GRADE III

Our World renowned work-horse grade: probably the most widely accepted DPN in the World, for both Research and Clinical studies. Recommended where near-maximum precision is essential.

A special grade prepared for applications that do not require highest purity. Although not equal to our Grade III, this grade is guaranteed to be at least as pure as any lower priced DPN presently available for Automatic Analyzer usage. Yet the price in bulk quantities of 100 grams and over is considerably lower than is possible for our Grade III.

If you have a substantial need for DPN (NAD) please phone me "Person-to-Person" (Collect, of course) at any time of the day or night, and from anywhere in the World. I think I can make it worth your while.

> Thanks Dan Broida My phone - (314) - 993-6418 St. Louis, Mo. USA (I am usually available)

It's a pleasure doing business with Sigma

For D.C. or pulse counting applications where only a small number of photons are available, EMI offers the 9789 Photomultiplier with a 10mm high efficiency bialkali cathode and a unique front end geometry. This tube typically operates at 1350 V overall for 4 x 107 gain with a corresponding dark current of 10-10A at 20°C. Total dark counts are typically 50 counts/sec. at 20°C with a further reduction to 10 counts/ sec. at -20°C. The 9789 is available with a quartz (fused silica) window as the 9789QB or with a pyrex window as the 9789B. The 9789 is a direct plug in replacement for the well known 6256/9502.

The interference microscope for transmitted light, accurate to 1/500th wavelength INTERPHAND by

sophisticated interference phase-contrast instrument to contrast and measure the thickness and/or refractive index of the most minute, most transparent microscopic subjects in your laboratory. The precision unit affords 4 investigative methods in addition to normal bright-field investigation: Shearing, with differential and total image splitting in interference contrast; Interphako, without image splitting by use of axially symmetrical illumination; positive, negative, central dark-field and colored phased contrast; and the interference fringe method

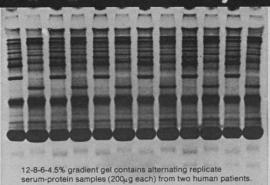

Versatility and ease of operation complement excellent image quality through the low-, high- and highest-power objectives of the AMPLIVAL INTERPHAKO. The instrument may also be used with normal bright-field objectives of any type correction.

Ortec flat-slab acrylamide electrophoresis. The difference is rather easy to see.

- 12 easily-compared samples sideby-side in the same gel slab, 24 samples per run.
- Precision glass cells maintain even cross-sectional field strength, bond firmly to gel to give far better results than plastic cells or round tubes.
- You can move from analytical to preparative separations without changing cells.
- Pulsed constant power controls heating—no need for external cooling, even when separating labile enzymes.
- No pH discontinuities required in unique Ortec electrochemical sys-

- Ideal for isoelectric focusing and two-dimensional work.
- Separations can be easily watched taking place in clear Ortec tank unencumbered by cooling coils.

Write for Bulletin LS-100, which tells the whole story about really high-resolution electrophoresis. Ortec Incorporated, 110 Midland Road, Oak Ridge, Tenn. 37830; or phone (615) 482-4411. In Europe: Ortec Ltd., Dallow Road, Luton, Bedfordshire, England; or Ortec GmbH, 8 München 13, Frankfurter Ring 81, West Germany.

GRIND **EMULSIFY** DISINTEGRATE HOMOGENIZE SHRED BLEND OR MIX IN SECONDS!

Waring's exclusive cloverleaf shape is hydrodynamically designed for perfect blending action . . . the solid one-piece cover with molded gasket assures a perfect seal . . . our 3-speed, 1725-watt motor furnishes power to spare. Container, cover, and blending assembly are stainless steel: easy to clean and trouble free. An ingenious adapter lets you use the smallest container on the one-gallon base. Like all Waring Laboratory Blendors, this model is warranted for one year of laboratory use.

Waring also makes a complete line of explosion-proof Blendors, one-quart Blendors for every use, and a complete line of accessories. Write for our catalog.

Waring Blendors® are unique . . . no wonder we registered the name!

Thelco Baths

A matter of choice

No need to work with a bath unsuited to the task-Thelco® makes it a matter of choice. Three Sero-Utility models have capacities of $1^{1/2}$, $4^{1/2}$ and 9 gallons, plus adjustable diffuser shelf for a choice of 5" or 7" chamber depth. Two Low Profile Serological models, a single and a dual chamber, are only 7" high. And there is a Micro-Serological model that is conveniently portable. Gravity convection gives gentle, predictable mixing-double-wall, all-stainlesssteel with no moving parts to make noise or wear out. If the name Thelco means anything to you, it should mean uniformity-with Thelco Baths it's always within ±0.3°C at 37°C, ±0.4°C at 56°C.

Thelco-leader in constant temperature equipment for more than fifty years. Get all the facts about Thelco Baths from your Precision Scientific Dealer or write us, Precision Scientific Company, 3737 W. Cortland St., Chicago, III. 60647.

to hospital, clinic and industrial laboratories only

See for yourself why Holtzman Rats are specified by more laboratories each year. They're the result of modern techniques in caesarian derivation, partial inbreeding, nutrition and animal husbandry.

All Holtzman Rats are air-shipped in close weight and age groups. Safe arrival and satisfactory quality guaranteed. Extra rats included in every order.

For your free trial supply, just fill out and mail coupon. Let us prove what we say.
