Our catalog line of carbon-14 labeled compounds isn't large enough to make us complacent. But it is big. In fact it's about the largest selection of C-14 labeled compounds you will find anywhere available from a catalog.

And it's always growing larger. There are over 700 research chemicals labeled with carbon-14 in 10 product groups, including amino acids, bile acids, drugs and related chemicals, insecticides and pesticides, nucleosides, nucleotides, organic intermediates, polynuclear aromatics, steroids, purines and pyrimidines. We also feature a growing list of tritium labeled compounds, to round out our product line.

A large and growing line is fine — but it's not enough. Each Mallinckrodt product comes to you in a revolutionary see-thru protective package, with thorough documentation of purity. Radiochromatographic profiles from at least two different chromatography systems are included with each labeled compound. And with each product in Mallinckrodt's guarantee-of-purity certificate.

Sound like too much to hope for? Try us. Write or phone (314) 291-8191 for our new catalog. See for yourself.

Check these catalog C-14 labeled compounds — many available only from Mallinckrodt.

What in the world ARE YOU doing with a Brinkmann Micromanipulator?

First and foremost, Brinkmann micromanipulators were designed for biological applications, so it's no surprise they are widely used in microsurgery and neurophysiology.

What is surprising is that they have so many other uses. For example, in microchemistry, they're used to handle radioactive samples; in electronics, to probe microcircuits, and by physicists to align laser systems.

What could you be doing more efficiently with a Brinkmann micromanipulator? Over 40 different models permit precise movement in magnification ranges up to 750X. There are inverted models, models with calibrated high sensitivity drives, tilting and rotating devices, and a full range of accessories. Let our free catalog start you thinking of some novel new uses. Just write: Brinkmann Instruments, Cantiague Rd., Westbury, New York 11590.

PARR® CELL DISRUPTION BOMB

For Rapid Cell and Tissue Extractions

With samples held under an inert nitrogen blanket, rapid decompression from a reliable PARR® bomb offers the ideal way to release the contents of cells, tissues and micro-organisms without heating, without ionization and without high mechanical stress. Either large or small samples can be treated easily with the action varied to produce either partial rupture or complete homogenization by simply adjusting the nitrogen pressure.

Ask for Product Sheet 4635 describing this convenient extraction method.
