# The forgettables in constant power.

EC500VL with Voltage Limit Control . . . 2,000 volts . . . \$1,195

EC500 . . . 2,000 volts . . . \$1,095

EC400\* . . . 1,000 volts . . . \$795

If you're doing advanced separations work, dependable power supply ought to be the least of your problems.

It can be, too, with the new EC400 and EC500—both true constant power supplies which automatically compensate for changes in voltage or current.

The EC400, at \$795, offers you up to 1,000 volts maximum, 200 mA maximum current, and 200 watts maximum power.

The EC500, at \$1,095, gives you up to 2,000 volts maximum voltage—a must for highest resolution in techniques such as isoelectric focusing. Maximum current is 150 mA and maximum power is 300 watts.

Both E-C power supplies have dual-range meters, positive safety interlock, and dual electrical protection. Both adapt easily to any type of electrophoretic cell. Each is available with Voltage Limit Control at slightly higher cost.

Set and forget. Isn't that what you want and need in a laboratory power supply? For technical information call 813-344-1644 collect or write . . . E-C Apparatus Corporation, 3831 Tyrone Blvd. N., St. Petersburg, FL 33709.

**A product of the Separations Specialists.**

\*also available with  
Voltage Limit Control  
as EC400VL . . . \$895

Juvenile Belding's ground squirrels (*Spermophilus beldingi*) at Tioga Pass, California. These littermates (about 1 month old) have been above ground 1 day. Adult females in this social rodent species mate polygamously. Electrophoretic paternity exclusion analyses indicate that most litters are sired by more than one male. Therefore, these squirrels may be either full siblings or maternal half-sibs. See page 351. [George D. Lepp, Los Osos, California]

# THE EASIEST WAY TO

# MEASUREMENTS

# AUTOMATE YOUR LAB.

## MACSYM 2 IS THE COMPUTER-BASED MEASUREMENT AND CONTROL SYSTEM THAT CONNECTS DIRECTLY TO YOUR SENSORS.

MACSYM 2 is the easiest way to collect your data, store and analyze it, and automate your experiment. It's not only easy to hook up, it even speaks BASIC — a powerful computer language that's easy to understand and easy to use. Whether your application involves sensor linearization or

**60 X=AIN(8,0)  
70 AOT(0,1)=0.5\*SIN(X)  
80 IF X>5 DOT(1,1)=1  
90 IF X<5 DOT(1,1)=0  
100 WAIT.5 GO TO 60**

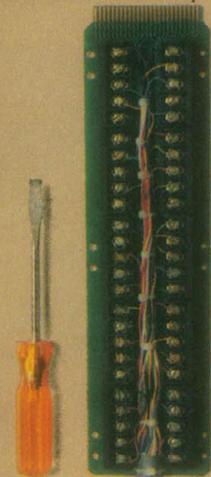

This program instructs MACSYM 2 to input analog data (AIN) from card slot 8 channel 0, set the analog output (AOT) of card slot 0 channel 1 to 0.5 times SIN (X). If X is greater than 5 volts, sound alarm on slot 1 channel 1; if less, turn off alarm. Wait 1/2 second, read again. It's that basic.

data reduction, you'll program it faster in BASIC.

And MACSYM 2 is flexible enough to run several experiments at the same time. With it, you can generate reports, plot data, display alarms, or update a central computer. And MACSYM 2 even allows you to change variables as an experiment is running.

See for yourself why thousands of MACSYM 2's are already in use around the world. For the fastest response, simply fill out and return the coupon below, or call your nearest Analog Devices sales office.

Circle No. 181 on Readers' Service Card

# Another first for DNA-RNA studies

With the introduction of our new 3' End Labeling System, we now offer six systems, plus special accommodation packaging, to make your DNA-RNA studies faster, surer, and more reproducible.

## Only from NEN

## 3' End Labeling

The world's first 3' End Labeling System labels protruding, flush, and recessed 3' termini with 3'-dATP, [ $\alpha$ - $^{32}\text{P}$ ]- (cordycepin 5'-triphosphate) in a simplified protocol adapted from the procedures of Tu and Cohen.<sup>1</sup> The system utilizes terminal transferase to add a single dATP, [ $\alpha$ - $^{32}\text{P}$ ]-molecule to the 3' end of a DNA chain. The resulting labeled DNA is suitable for sequencing by the Maxam and Gilbert technique.<sup>2</sup>

The components are designed to end label up to 100pmol of 3' ends per reaction:

3'-dATP, [ $\alpha$ - $^{32}\text{P}$ ]- (Cordycepin 5'-triphosphate)

Terminal Deoxynucleotidyl Transferase  
Terminal Transferase Reaction Buffer  
Cobalt Chloride  
Control Plasmid DNA Fragments  
Deionized Water

Prior to shipment, all system components are subjected to a complete 3' end labeling procedure. The polyacrylamide gel used to separate the fragments is autoradiographed to assess labeling efficiency, and a copy of the autoradiogram is included with your system.

Order NEK-009 (10-reaction system)  
NEK-009A (5-reaction system)

## 5' End Labeling

The world's first 5' End Labeling System is an accurate, efficient, time-saving means of labeling nucleic acid. Adapted from procedures described by Maxam and Gilbert,<sup>2</sup> it includes ATP, [ $\gamma$ - $^{32}\text{P}$ ]- with our own specially prepared polynucleotide kinase and a carefully balanced complement of buffers, enzymes, and other reagents necessary for labeling the 5' termini of DNA fragments.

Systems sufficient for either 10 or 5 reactions (up to 50pmol 5' ends per reaction) contain the following components:

Adenosine 5'-triphosphate, [ $\gamma$ - $^{32}\text{P}$ ]-  
Alkaline Phosphatase  
Polynucleotide Kinase (purified to homogeneity)

Phosphatase Buffer  
Direct Phosphorylation Buffer  
Exchange Phosphorylation Buffer  
*Hinf* I Digest of Plasmid DNA, pBR322  
(control to check the system)  
Deionized Water

The system is tested the day before shipment using the same lots of components you will receive, including fresh tracer. The resulting autoradiogram is included with your system.

Order NEK-006 (10-reaction system)  
NEK-006A (5-reaction system)

## Translation

NEN's *in vitro* protein translation systems have made cell-free translations of eukaryotic mRNAs exceptionally reliable and reproducible. These time-and-trouble-saving systems are offered with either Methionine, L- [ $^{35}\text{S}$ ]- or Leucine, L- [ $^3\text{H}$ ]-labeled tracers. Both utilize an extract of rabbit reticulocyte lysate that has been treated with micrococcal nuclease to inactivate endogenous mRNA. The lysate is prepared under strictly controlled conditions to ensure retention of high protein synthesis activity.

Systems sufficient for 100 or more reactions contain the following components:

Rabbit Reticulocyte Lysate  
Methionine, L- [ $^{35}\text{S}$ ]-, or  
Leucine, L- [ $^3\text{H}$ ]-  
Translation Cocktail  
Control mRNA  
Magnesium Acetate  
Potassium Acetate  
Deionized Water

Each lot of systems is biologically tested with the exogenous control mRNA. A graph demonstrating Methionine or Leucine incorporation is provided with your shipment.

Order NEK-001 (Met [ $^{35}\text{S}$ ])  
NEK-001A (extra ml of lysate included)  
NEK-001B (tracer shipped as needed)  
NEK-002 (Leu [ $^3\text{H}$ ])  
NEK-002A (extra ml of lysate included)

## Nick Translation

We now offer two exclusive systems for making consistently high specific activity probes using nick translation: dCTP, [ $^{32}\text{P}$ ]- and dTTP, [ $^3\text{H}$ ]-. Both systems include *E. coli* DNA Polymerase I prepared in our laboratories to ensure extremely high reproducibility. The DNase I, dNTP mixtures, stop buffer, and sterile deionized water are optimized for compatibility and stability.

Systems sufficient for either 20 or 10 reactions contain the following components:

Deoxycytidine 5'-triphosphate,  
[ $\alpha$ - $^{32}\text{P}$ ]-, or  
Deoxythymidine 5'-triphosphate,  
[methyl, 1', 2', - $^3\text{H}$ ]-  
DNase I  
DNA Polymerase I  
Control Plasmid DNA (pBR322)  
Deoxynucleoside Triphosphate  
Mixture  
Nick Translation Buffer  
Nick Translation Stop Buffer  
Deionized Water

Each lot of systems is tested with the control supercoil pBR322 plasmid DNA to ensure efficient incorporation of dCTP or dTTP into DNA, and a copy of the curve is included with your system.

Order NEK-004 (dCTP [ $^{32}\text{P}$ ])  
(20 reactions, tracer in ethanol)  
NEK-004A (10 reactions, tracer in ethanol)  
NEK-004B (20 reactions, tracer concentrated in aqueous solution)  
NEK-004C (10 reactions, tracer concentrated in aqueous solution)  
NEK-005 (dTTP [ $^3\text{H}$ ])  
(20-reaction system)

# Now turn 35mm slides

Now you can produce your own prints from your slides. On the spot. In seconds. There's no more waiting for days to get your prints back or paying a premium for rush service.

Our new Polaprinter Slide Copier gives you a color print in 60 seconds or a black and white print plus a reuseable negative in just 30 seconds.

The Polaprinter takes up less than a square foot of space. It has automatic exposure control and an independent control for adjusting contrast to your liking. It also has a cropping selector to adjust for the slight disproportion between slide and print formats.

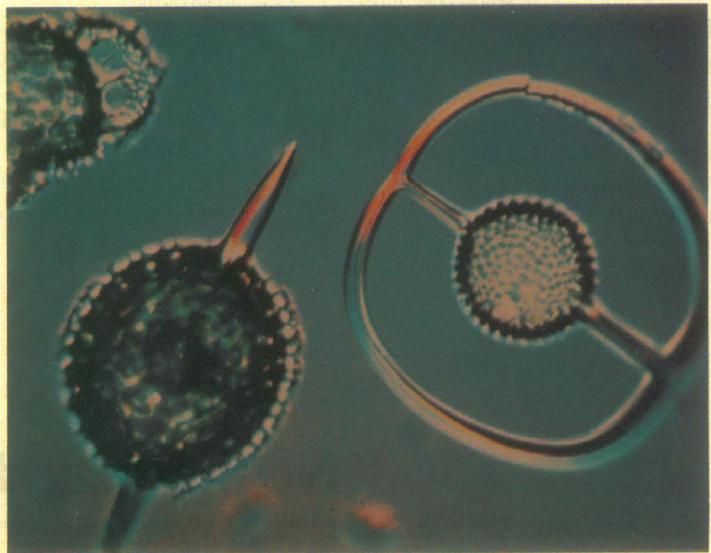

Here is the quickest, easiest way to prepare prints to illustrate reports and articles. Or keep records. Or supplement correspondence. Or make a handy print file from your slides. And you always have the security of doing your

own copy work.

See for yourself. Bring a 35mm slide to a participating dealer for an instant demonstration. For the name of your nearest Polaroid Polaprinter dealer, call toll-free from the continental U.S.: 800-225-1618. In Mass., call collect: 617-547-5177.

## into 3¼ x 4¼" prints. In seconds.

Polaprinter Instant Slide Copier

FOR TODAY'S FACULTY AND COLLEGE STAFF MEMBERS\* FROM 18 TO 80.

# Whether you're thinking retirement or not, review the plan that provides for cash withdrawal and/or a lifetime income.

**TIAA-CREF Supplemental Retirement Annuities (SRAs) offer you substantial flexibility including cash withdrawal and/or lifetime retirement income. You can even reduce your income taxes now!**

You can begin contributions to an SRA at any age and begin benefits at any age up to age 71 unless you are still employed (then you can delay beginning benefits until age 80). For example, you could start contributions at age 25, and choose to begin benefits or withdraw cash at age 34, 40 or 50, regardless of your employment status.

### Get your money at any time.

You can receive benefits as a lifetime income or over a fixed period of from 2 to 10 years. What's more, if you need it (even while employed by your current employer), you can withdraw all the money you have accumulated by surrendering your contracts. Or, you can withdraw \$1,000 or more every six months. There is never a cash surrender charge.

### Contributions are tax-deferred, so you pay less income taxes now.

The federal income tax on your contributions is deferred until they are paid to you as benefits. So, you pay less tax now.

### Changing employers? Take SRAs with you.

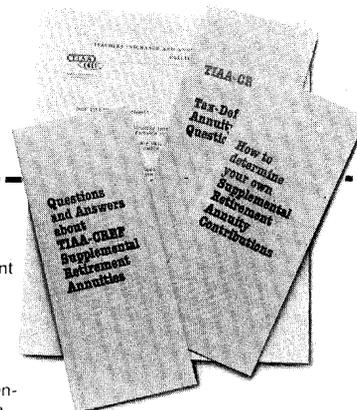

Since you own your Supplemental Retirement Annuities, you take them with you if you leave your current employer. You can make contributions through any institution that makes Supplemental Retirement Annuities available to staff members. Contributions can be as little as \$25 a month.

### Full information.

Complete and mail the coupon for an SRA Information Kit today. You'll get full details about all the advantages SRAs have to offer, why this plan suits so many financial situations and age groups and how much you may contribute to the plan.

\*TIAA-CREF provides annuities and other services for employees of colleges, universities, private schools and certain other nonprofit tax-exempt educational and research institutions.

# The Ventilated Animal Rack:

Some day soon most research animals, personnel, and research programs will be protected this way.\*

## What is a "Ventilated Animal Rack"?

It is a portable, totally enclosed animal rack with four separate, independent, isolated-from-each-other chambers. Low velocity air enters each chamber, makes a single pass over the cages, and is exhausted by negative pressure directly to the main exhaust system. This special rack (VR-1) most effectively isolates the animals from the animal room . . . and the research personnel from the animals.

## What are the benefits to the animals?

There are many. Cross-contamination is substantially decreased because air from an infected animal goes to the exhaust system with an absolute minimal exposure of the other animals. Animal stress is also significantly reduced: the enclosed environment is quiet; drafts and thermal and humidity fluctuations are greatly minimized; and animals can be easily observed without inducing stress. The success of this environment is attested to by the fact that the total number of animals born to a species that breeds poorly (DBA/2J mice) is increased and the percent survival is also appreciably higher. Additional evidence: judging by acceleration of weight gain, newly arrived animals housed in this system become acclimated more rapidly. Further evidence? Even multiple species can be successfully housed in the same rack.

## What are the benefits to the research workers?

Since the air in the rack is exhausted into the main exhaust system and does *not* re-enter the animal room itself, research workers are effectively isolated from animal dander or other allergens, odor, pheromones, microorganisms, and food and bedding dust. Even with the doors of the unit open, the direction of air flow tends to be *from* the room and *into* the unit which helps to contain contaminated air *within* the unit. Result: virtual elimination of allergic reactions and generally, a cleaner, safer, odor-free work environment for the research people.

## What are the benefits to research programs?

Because this system greatly reduces the chance of cross-contamination, and because it provides a much less stressful environment generally (e.g., it tends to reduce the amount of animal handling required), the chances of jeopardizing expensive research programs are substantially minimized.

\*Many of these systems are already installed in major research institutions . . . and conversion to these ventilated animal racks is accelerating.

## Are there other benefits?

The air velocity is variable and is separately adjustable for *each* shelf. The system offers a choice of bottle watering or a specially designed upfeed serpentine automatic watering configuration that eliminates stagnant water, permits flushing during the day, and significantly minimizes contamination. This rack also permits excellent space utilization since multiple species can be safely housed in the same room. Cleaning is easy; VR-1 can be handled by most standard rack washers. The unit is quiet. And, in summary, it is a most effective isolation system *that can actually divide a room into multiple separate, isolated environments.*

## From Lab Products, Inc.—The leader in environmental control products

Lab Products now offers the widest selection of systems for environmental protection: five Stay-Clean™ laminar flow systems; Isosystem™ housing system consisting of a disposable filter cap, cage cover, and plastic cage; Enviro-Gard™ filter system with permanent filter bonnets; and See-Through™ suspended cage systems with a special filtering system. We are now likely to have at hand solutions to virtually all of your environmental problems.

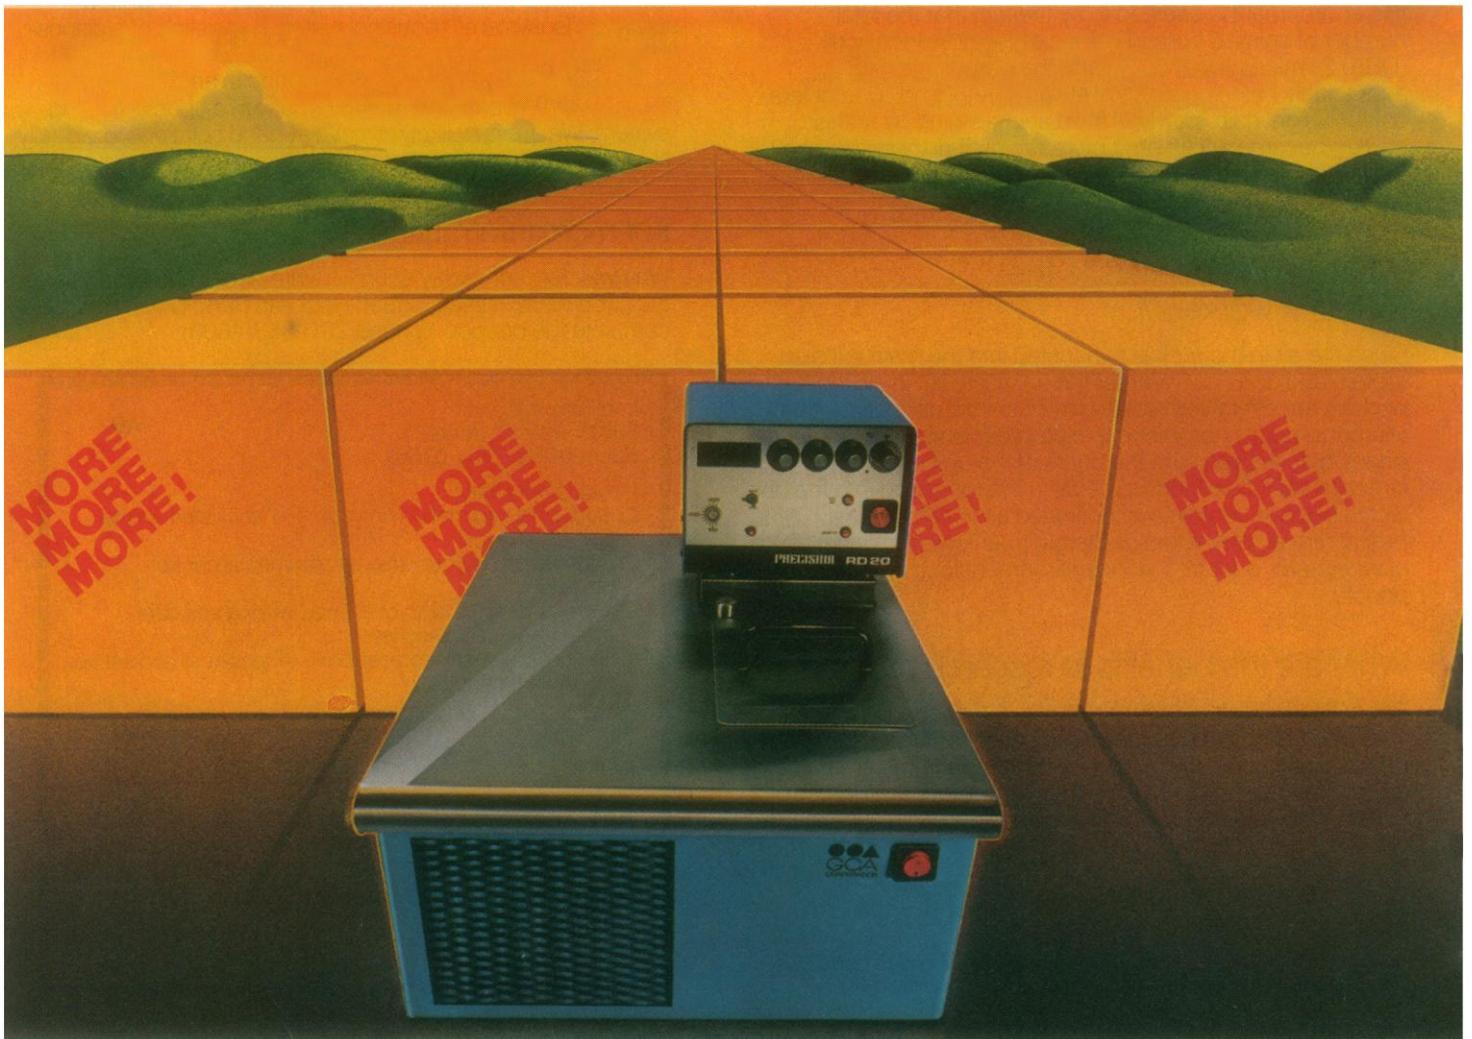

## For more information

# MORE MORE MORE PRECISION

17 New  
Circulators,  
 $\pm 0.02^{\circ}\text{C}^*$

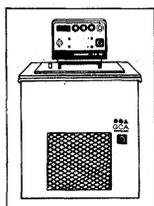

You never had such a wide choice of accurate, solid state circulators as you now have with Precision™.

Our newest additions feature more °C control than ever before. It's all to give you more accurate, reliable performance every time you circulate.

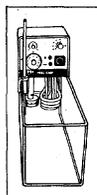

Measure all your constant °C—in baths, circulators, ovens, and incubators—with Precision.

\*±0.01°C, in fact, for two models! Frigid -60°C circulator is precise to ±0.1°C.

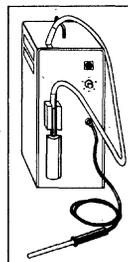

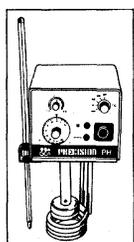

Pick from seven new refrigerated circulators. Various models feature digital set, LED display, smooth duplex pumps, multiple safeties or indicator lights.

These same fine options can be found on select new ambient circulators. Five models; 4 liter to 8 liter capacity.

Choose a new compact 7 liter or 12 liter benchtop circulating bath.

Two new portable coolers and a portable circulator help you craft your own system.

Send for the new Precision circulator brochure.

### Evolutionary Studies

In his interesting article about the creationist suit recently tried in California (News and Comment, 20 Mar., p. 1331), William J. Broad notes that this deliberately limited case could prove to be a mere prelude to a major series of legal battles over basic constitutional issues. As adumbrated by the creationist attorney Richard K. Turner, exposing the "religious" nature of evolutionary "beliefs" will be part of the fundamentalists' legal strategy.

Turner cites Popper's falsificationist theory of science, and the notorious deduction that the inability to make predictions denies scientific character to evolutionary theory. In 1980, Popper dissociated himself from this deduction which claims evolutionary studies to be "metaphysical" (1). In these circumstances, Popper's exact words should be quoted: "It appears as if some people would think that the historical sciences are untestable because they describe unique events. However, the description of unique events can very often be tested by deriving from them testable predictions or retrodictions." In short, Popper has now defended the scientific character of the theory of evolution and of paleontology.

Popper's own statement, made after critical reexamination of his views on the methodology of science, proves much broader than those of many experimentalists who claim his views as the basis of their scientific operations. A similarly narrowed view of Darwinism has dominated adaptational research with theories based on current and immediate optimality of all structures and processes. This restrictive research program has been criticized recently by Gould and Lewontin (2), who have set out a number of alternatives in an elegantly presented essay which supports Darwin's own pluralistic approach to evolutionary studies. Credible and successful scientific defense in future creationist trials could require that scientists avoid making narrowly restrictive and unnecessarily dogmatic statements about their scientific methodology.

### Population Growth and Energy Use

In his editorial "It is people who use energy" (30 Jan., p. 439), Kingsley Davis proposes population growth as a major cause of the energy problem.

In the United States, even if population had remained constant from 1955 to 1978, total energy consumption would have increased by 51 percent. To compensate for the increase in per capita energy consumption, the 1955 population would have had to fall by 56.2 million people or 34 percent by 1978.

Davis says worldwide consumption of energy has been growing at a rate of 3.5 percent per year. By contrast, population has been growing at a rate of between 1.7 and 1.8 percent. Thus, while population growth may be a major cause of rising energy consumption, one cannot disregard per capita consumption.

Per capita energy consumption in industrialized countries in 1978 was about 44 times higher than in low-income countries. The estimated annual population growth rates for these two groups of countries were 0.7 percent and 2.2 percent, respectively. While low-income countries accounted for 30.5 percent of the 1978 world population, they consumed only about 2.4 percent of the energy resources. In comparison, industrialized countries accounted for only 15.7 percent of the world population but consumed about 54.4 percent of the energy resources (1). A decrease in worldwide population growth rates, without a decrease in per capita energy consumption in industrialized countries, cannot solve the global energy problem.

#### References and Notes

1. Based on data included in tables 1, 7, and 17 of *World Development Report, 1980* (World Bank, Washington, D.C., 1980). This report classifies 125 countries in six groups: low-income, middle-income, industrialized, capital-surplus oil exporters, and centrally planned economies. Countries in these six groups accounted for 30.5, 20.6, 15.7, 1.4, and 31.8 percent of the 1978 world population but consumed about 2.4, 9.1, 54.4, 1.1, and 33.0 percent of the energy resources in 1978.

Davis infers that part of the energy problem in the United States is that we are letting in too many refugees. People use energy, true. However, I doubt that immigrants are the ones who are surrounded by electrical gadgets at every turn, keep comfortably warm or cool despite the weather, and drive their own cars (plural per family) rather than sup-

# Close the Information Gap with CA SELECTS®

## PROBLEM:

Scientific information grows rapidly. Your capacity to read doesn't.

## SOLUTION:

Get CA SELECTS—a selective biweekly publication devoted to summaries of articles in your area of research.

CA SELECTS brings you abstracts of the world's chemistry-related journal articles and other literature on the topic you choose from the 110 now available.

Absorb more information in a few hours than you now get in days of reading journals. No other current-awareness service in chemistry is comparable. Price: just \$75 per year.\*

\*Prices vary in U.K., Republic of Ireland, W. Germany, Japan, and France.

Send for FREE Catalog of CA SELECTS topics.

Please send my free CA SELECTS catalog and ordering instructions.

port public transportation. The relationship between numbers of people and energy use involves more than per capita use figures.

EVELYN STRENG

Texas Lutheran College,  
Seguin 78155

With respect to Strenge's letter, I can say only that immigrants are people, and, like other people, they use energy. They need heat in winter and air conditioning in summer, just as other people do. They eat food grown with fossil fuel, and they drive cars. In fact, the worldwide current of migration from less to more developed countries is exacerbating the drain on energy supplies, because the migrants use more energy after migrating than they did before.

Jain and I agree that a solution to the world's energy crisis requires conservation, particularly in the industrial countries. We disagree when he uses this view to obscure the necessity of population control and implies, as is often done in the Third World, that the energy problem would be solved if the industrial nations were less wasteful.

His own analysis, I think, shows the futility of conservation in face of population growth. If the less developed countries are consuming far less energy than the industrial countries, they are evidently *conserving* it. This enforced conservation, however, is not solving their energy problem; rather, their population increase is creating a demand for fossil fuels which they are too poor to meet, with the result that they are burning up their forests at a prodigious rate and using their land and human resources inefficiently.

In the 38 countries the World Bank singles out as low-income countries (25 of them in Africa and most in the tropics or subtropics), the average population density is two and one-fourth times that of the industrial nations; yet their population increase is three times as fast. Their external public debt and foreign debt service have been rising relative to the gross national product, and their food deficit, already monumental, is forcing them to rely for subsistence on the New World industrial nations. These nations, however, can export food on a grand scale only because their ratio of people to land resources is still reasonably low and because they use copious amounts of energy in agriculture. As the Steinharts, Pimentel, and others have shown, more calories are being used in American food production and distribution than the food itself yields at the table. In the process, we are losing top-

Circle No. 3 on Readers' Service Card

soil, poisoning rivers and lakes, and exhausting fossil water reserves. As the cost of energy soars, so will the cost of food exports. The unprecedented growth of population in the less developed countries is thus causing an acute energy crisis not only at home but in the world as a whole. Conservation in the industrial states, badly as it is needed and certainly as it is soon to come, cannot compensate for this relentlessly mounting pressure on diminishing resources.

### Innovation in Science Teaching

Was Frederick Mosteller aware that his important presidential address, "Innovation and evaluation" (27 Feb., p. 881), concluded with the beautiful but tragic example of his point? He suggested that the AAAS sponsor initiatives in science and engineering education. Perhaps he was thinking of a recent 211-page book (1) reporting the results of nine studies under contract to the National Science Foundation. Neither Mosteller nor the authors of that book mentioned teaching methods which have long since proved their value (2).

In 1960 in Roanoke, Virginia, an 8th grade class, using simple teaching machines and a previously untested program, covered all of 9th grade algebra *in one term*. Their grades met 9th grade norms, and measures of retention a year later were considerably better than normal. The educational establishment should have been delighted. Here was the way to teach algebra! But, 20 years later, the study is forgotten. Forgotten also are scores of equally dramatic experiments. Surely this is an example of a lag in the use of innovations to be added to those so delightfully described by Mosteller.

What is needed in education is not innovation but a change in the establishment that will permit efficient teaching methods to be used.

# Trust Gilson... for dependable performance in peristaltic pumps.

You can trust Gilson because we have added the vital dimension of performance to our peristaltic pumps.

You have a right to expect all the pump performance you pay for and Gilson delivers the finest. Our engineers have incorporated these performance features into the Minipuls 2: ultra-low pulsation, high torque motor, continuous flow adjustment, feedback control circuitry, and interchangeable pump heads.

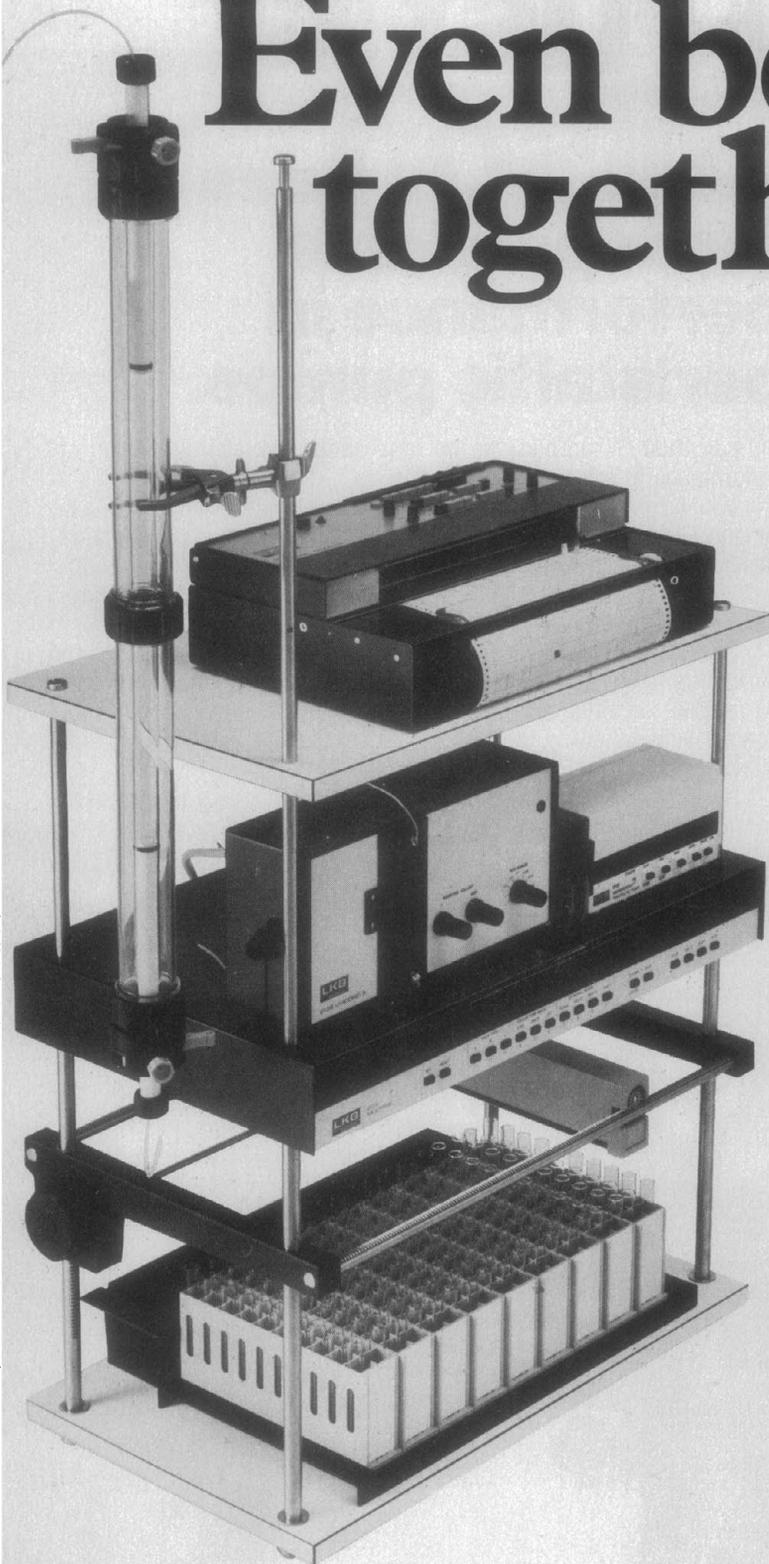

The Minipuls 2 is ready to assist you with general low pressure chromatography, media preparation and dispensing, liquid transfer for sample changers and physiological studies including organ infusion. A wide variety of tubing lets you choose the flow rate best for your application.

Keep in mind: dependable performance is the **only true dimension** of outstanding design. For more information, call or write: Gilson Medical Electronics, Inc., 3000 W. Beltline Hwy., Middleton, WI 53562, (608) 836-1551; Gilson Medical Electronics (France) 72 rue Gambetta, 95400 Villiers-le-Bel, FRANCE, 990.54.41.

# Even better together.

Individually, LKB chromatography instruments provide outstanding reliability and consistently accurate results.

But together, they form total, integrated systems that are unequalled in their ease of use and dependability. The LKB 2111 MultiRac<sup>®</sup> Fraction Collector is the core of just such a system.

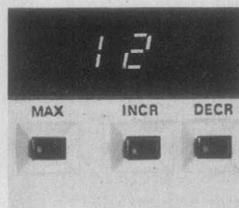

## LKB excellence in design

The LKB 2111-MultiRac<sup>®</sup> system combines the ultra-reliable 2111 Fraction Collector with the new MicroPerpex<sup>®</sup> peristaltic pump, 2110 dual channel recorder and high sensitivity 2138 Uvicord<sup>®</sup>S UV monitor in one compact package. This entire system takes up less than 2 square feet of bench or cold room space. Yet, every instrument is easy to reach and adjust.

## Integrated ease of operation

With the programmable 2111 MultiRac controlling the run, you're assured of accurate, no waste, no problem collections. And with precise pump control of fraction volumes,

automatic flow stop function during tube changes and continuous display of flow rate on the MicroPerpex pump, the system needs minimal interaction time with laboratory personnel.

## Versatile and reliable

This new LKB collector draws on years of design experience and incorporates the most advanced circuitry. Because

the MultiRac precisely shifts the drop head, it can accommodate a large variety of collection vessels.

The sophisticated microprocessor controller of the collector lets you

select time, drop or precise volume modes, diverts void volumes to waste and can be programmed to save tubes by collecting valleys in large volumes, peaks in small.

## See it all together

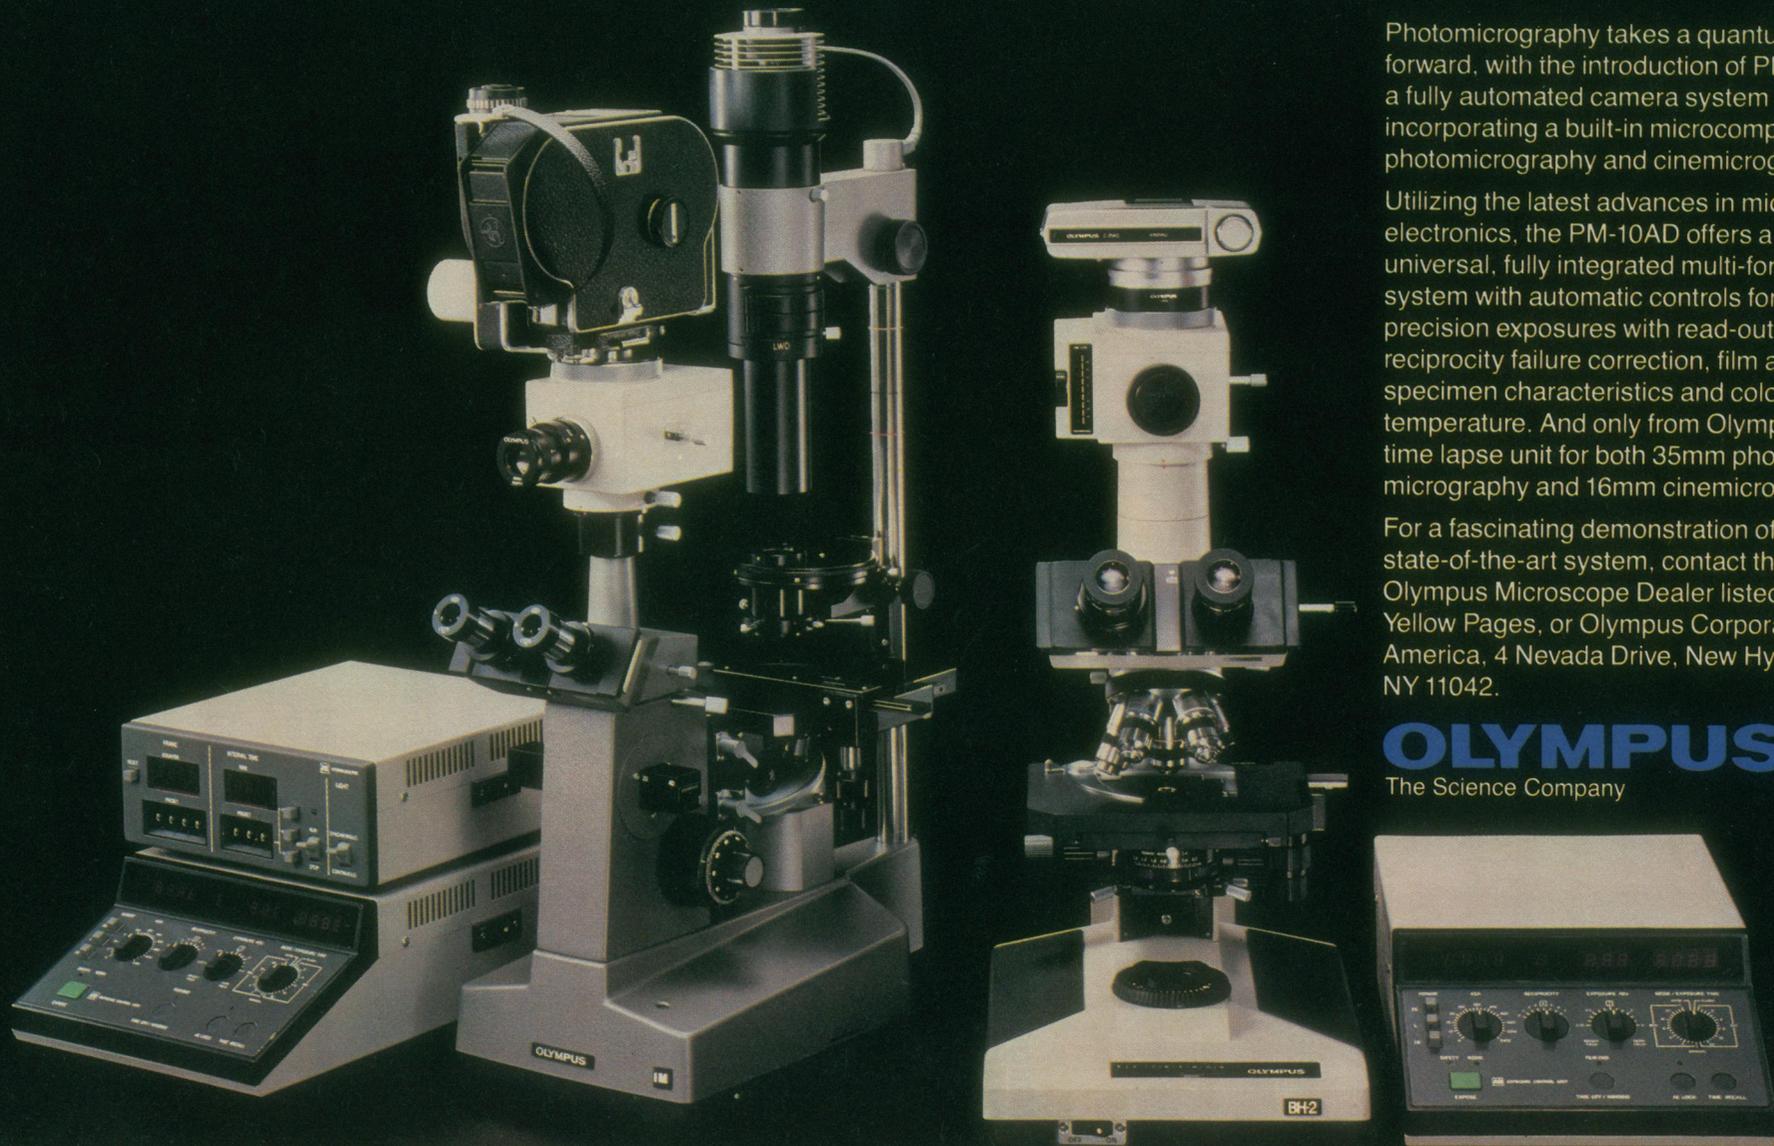

Ask your LKB representative for more information on LKB complete chromatography systems. See how they work even better together.

# BREAK THE GLASS HABIT

Nalgene  
Labware

## **Nalgene® PMP Volumetric Flasks are as transparent as glass.**

Nalgene® PMP Volumetric Flasks are just as clear as glass. PMP (polymethylpentene) construction gives them the clarity of glass without the breakability.

That makes Nalgene Volumetric Flasks safer than glass to use. When you drop one, it bounces instead of shattering. And the leakproof screw closure is easier to handle than a fragile penny head stopper.

Nalgene Volumetric Flasks are just as accurate as their glass equivalents, too. They're calibrated gravimetrically to guaranteed limits of error and individually marked. Unlike glass, Nalgene Labware is non-wetting, so these flasks deliver the amount of solution measured (TC = TD). Nothing is left on flask walls.

And because Nalgene Volumetric Flasks last longer than glass, you reduce replacement costs.

Put Nalgene Labware to the test, and see why so many laboratories are breaking the glass habit. Send for our current Nalgene Labware catalog, featuring over 250 products for professional use. Write: Nalge Company, Division of Sybron Corporation, Nalgene Labware Department, Box 365, Rochester, N.Y. 14602.

And unbreakable Nalgene Labware lasts longer.

# Every week, we send *Nature* to the world's most important science addresses.

Scientists who are leaders in their field and who get to reap the rewards of their achievements are among *Nature's* most eager readers.

And they are renewing their subscriptions to *Nature* in record numbers.

If, like them, you keep searching for ways to speed up your research, or if you're looking for advancement where you work, or are thinking of moving on to something more stimulating, how can you afford to be without your own personal subscription to *Nature*?

It's the most certain and consistent way to get the research results, news, opinion, and analysis you need, while they're still fresh and can be applied most usefully to your own work.

With your own *Nature*, you'll be well ahead of the monthly journals whose reports often lag a year or more behind ours. And there isn't a science weekly anywhere that covers research developments in as many parts of the world, as fully and authoritatively, as *Nature* does.

The good news is that we've cut *Nature's* personal subscription rate in half and, to top it off, if you subscribe for a full year, we'll send you, free, a copy of *Nature's* new, annual *Directory of Biologicals*. Planned for fall 1981, the *Directory* will be the first truly worldwide buyers' guide to bio-

# NIKON VISIONS

## NIKON HIGH PERFORMANCE CF OPTICS. POSSIBLY THE FINEST EVER AVAILABLE.

Rat testis photographed with Nikon CF 40x oil plan apochromat. CF 5x photo eyepiece.

### INSTRUMENTATION

Nikon Optiphot microscope with CF objectives.

### SIGNIFICANCE

Nikon's revolutionary CF optics virtually eliminate chromatic aberration. Within this series, several high performance objectives significantly extend observation powers.

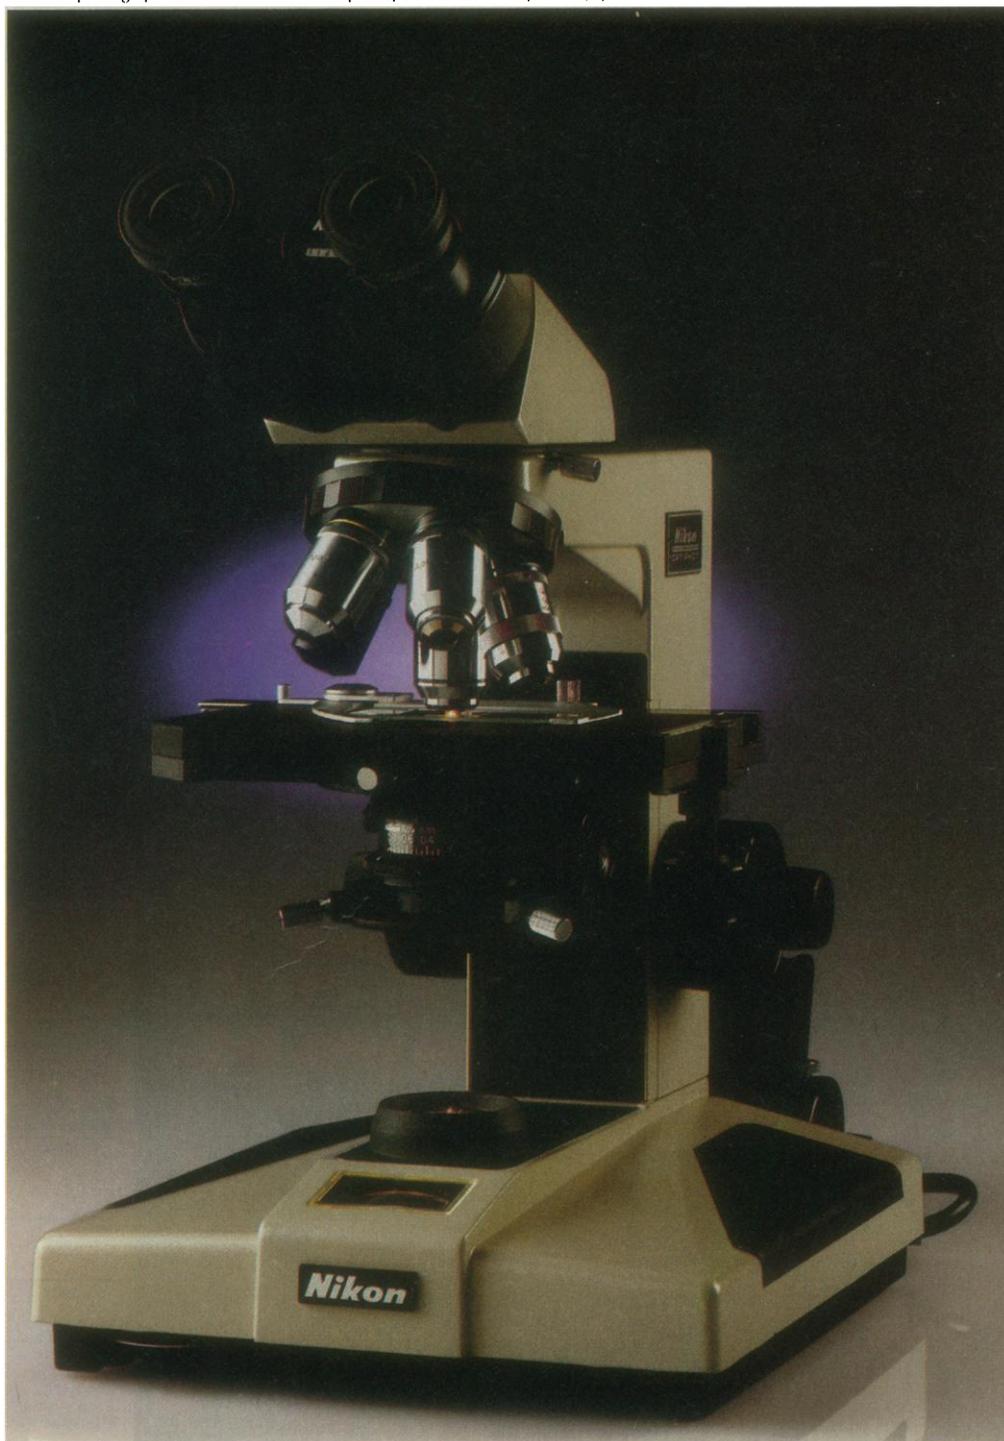

### SPECIFICS

While all Nikon CF objectives provide a dramatic improvement in resolution, color rendition and contrast over the old compensation system, the following lenses are exceptional. The unique CF 2x plan apochromat has excellent image flatness for low power photography. The CF 40x plan apochromat, N.A. 0.95, dry, produces exceptionally bright, high contrast images. Nikon's CF 100x NCG plan apochromat is designed to work without a cover glass. Its sharpness must be seen to be believed.

These remarkable optics are matched to a microscope body and illumination system equal to their performance—the Nikon Optiphot. This totally new design is extremely stable. A standard 50 watt halogen Koehler illumination system covers all magnifications without need for adjustment and the full range of Nikon accessories is available to match any assignment.

Extend your vision. Write: Nikon Visions, Nikon Inc. Instrument Division 623 Stewart Avenue Garden City, N.Y. 11530 (516) 222-0200

Extending Man's Vision

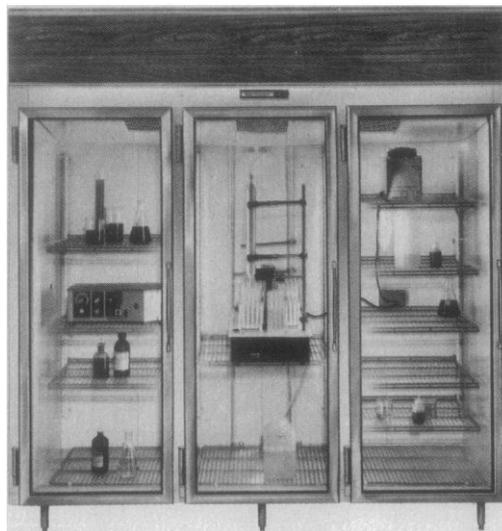

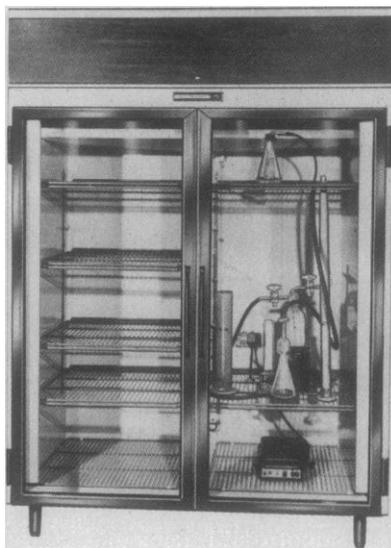

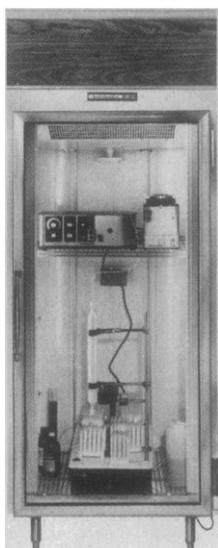

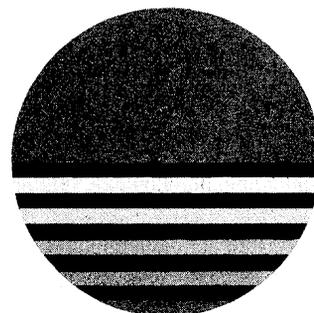

# KELVINATOR CHROMATOGRAPHY

Kelvinator has three ways to meet your cold room chromatography needs: One, two and three door refrigeration units, packed with features designed especially for chromatography applications.

Every Kelvinator refrigeration unit is constructed with an extra-thick layer of Urethane foam insulation for energy saving operation. Large tempered thermopane glass doors offer excellent visibility, close quietly and have superior insulating qualities.

Each cabinet comes equipped with a vapor proof duplex receptacle mounted inside, access portholes for attaching optional recorders and other equipment, heavy duty adjustable shelves and brilliant fluorescent lighting. A wide selection of optional accessories is also available.

In addition to offering the finest convenience features, every chromatography cabinet shares in Kelvinator's long tradition of dependable service. An exclusive Five Year Compressor Warranty Program\* and world wide factory recommended service network assures customers of first rate service when and where it's needed.

When your needs call for cold room chromatography equipment, remember . . . Kelvinator *means* refrigeration.

\*Details of the Kelvinator Five Year Compressor Warranty Program are available by contacting Kelvinator Commercial Products, Manitowoc, Wisconsin.

## QUALITY REFRIGERATION FOR THE LABORATORY

# High resolution

Micrograph of *Bacillus subtilis* on a 0.4- $\mu\text{m}$  polycarbonate membrane filter.\*

Micrograph of *Bacillus subtilis* on a 0.45- $\mu\text{m}$  tortuous path membrane filter.\*

## These membranes are different!

The unique structure of Nuclepore Polycarbonate and Polyester Capillary Pore Membranes significantly increases the efficiency and application range of microfiltration.

Unlike conventional, depth-type filtration media, Nuclepore membranes do not depend on path tortuosity and random entrapment for particle retention (see above). Instead, a screen-like, two-dimensional array of uniformly sized, smooth-bore captures particles on the filter surface.

Surface capture means high resolution. The extremely smooth, flat membrane surface makes an ideal background for microscopic examination.

Available in fifteen pore sizes ranging from 12 $\mu\text{m}$  to 0.03 $\mu\text{m}$ , Nuclepore membranes may be successfully employed in upgrading many important biomedical separation procedures including:

- Virus purification and Concentration
- Fractionation — the very low adsorption of the Nuclepore membrane makes these procedures feasible.
- Exfoliative Cytology — Cells are concentrated on a smooth non-staining surface for rapid diagnosis.
- Quantitative and Qualitative Analysis — Surface capture allows easy and rapid identification and analysis of particles.
- Sterilization — Nuclepore membranes add no offensive surfactants in critical filtrations.
- Plasmapheresis — Nuclepore offers low hemolysis combined with excellent flow rates.
- Rheology — Nuclepore's cylindrical straight through pores allow precise and rapid measurements.

• Chemotaxis and Immunology — Nuclepore's smooth surface allows rapid analysis.

• Particle Analysis of Airborne Contaminants — Nuclepore's smooth surface allows rapid analysis.

To learn more about how our filtration products can solve your separation problems, write for a copy of our new brochure or give us a call. A technical representative will be glad to discuss your particular application.

## Taking Science out of Social Science

The new Administration's goals of stabilizing the economy and revitalizing U.S. productivity are worthy of support. William D. Carey\* has pointed out that when national budgets are heavily cut, science and technology must expect to share in the reduction. Presumably the reasons arise more from equity than logic, since other developed countries that now surpass us in gains in productivity and compete with us for markets seem to be increasing their portion of the budget spent for R & D. At the same time, the Administration clearly does appreciate the value of research and has retained the overall National Science Foundation (NSF) budget at a substantial level.

Given that cuts are to be made at the NSF, great care should be given to the allocation of research funds. Philip Handler's description† of the cuts raises doubts about this care. Let me take up in detail one small but important division of NSF, Social and Economic Sciences (SES). Under the Administration's plan, SES funds in millions will drop from \$31 to \$24 to \$10 from fiscal year 1980 to 1981 to 1982. Without even allowing for inflation, this gives a reduction of 68 percent in 2 years. Similar deep cuts have been planned for the smaller Behavioral Sciences program. Large cuts in social science research funds announced elsewhere, as at the National Institutes of Health and the Department of Defense, would add to the damage.

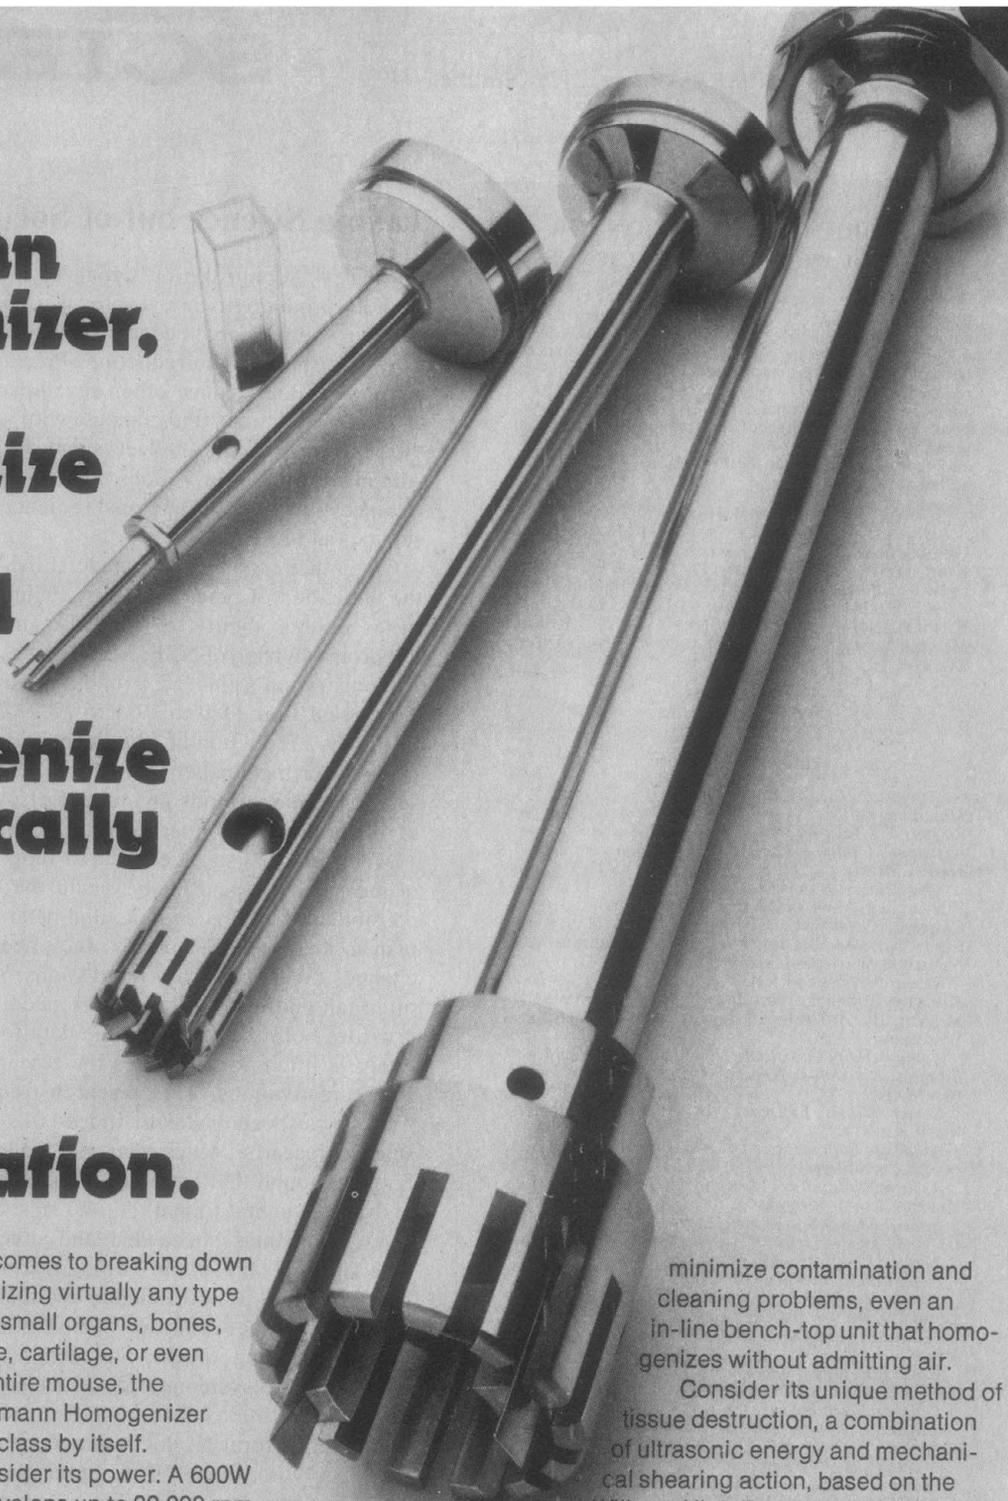

Much of social science research supported by NSF produces the methods of measurement and analysis and the concepts that make measurements possible in social, economic, and health problems. When society's leaders plan to change the economy, they need also to know the effects of their changes. We know that innovations, social, medical, and technological, often fail and that they therefore need evaluation. Social science research provides both the tools and the data for such evaluations. More constructively, it often also provides the research to improve the success rates of future innovations. This research frequently finds that the conventional wisdom has been mistaken, indeed that is a common characteristic of social science research which may not endear it to us. For example, Project Sappho‡ found that variables often mentioned in business lore such as size of firm, being first to market, and structure of research did not explain why some companies succeeded and others failed in introducing the same technological innovation. For innovation to flourish, we need more research on innovation, in both science and technology.

Among the better known contributions of social science have been the research leading to the national accounts and gross national product estimates, the systematic development of scientific sampling for objects, people, institutions, and records, and methods of measuring unemployment, agricultural production, and the effectiveness of medical therapies.

Probably not many of us appreciate how extensively the work of social scientists finds uses in business and industry. Of the 285,000 science and engineering doctorates employed in 1977 in the United States, social scientists comprise 27 percent. About one-third of these social scientists have employment outside academia. Of all the scientists in business and industry, social scientists comprise 11 percent.

If we fail to invest in social science research, we can anticipate a drying up of that research among our younger scholars. Worse yet, the best will leave the field altogether or not take it up. With the opening of China to the world, we have seen what an interruption of research can do to a society. It produces a long and sorry period of playing catch-up. The research that we fail to do now will penalize our own generation with a lack of ideas in a decade or so. The NSF has responsibility for enhancing the scientific resources and capabilities of the nation. By withdrawing NSF and other support, we will gradually delete the *science* from research endeavors in social science.—FREDERICK MOSTELLER

cross  
contamination.**

When it comes to breaking down and homogenizing virtually any type of tissue, small organs, bones, muscle, cartilage, or even an entire mouse, the Brinkmann Homogenizer is in a class by itself.

Consider its power. A 600W motor develops up to 30,000 rpm (1200W on PT-45 model, with up to 20,000 rpm) to assure complete homogenization of most samples within 30 to 60 seconds (other instruments may require 15 minutes or more).

Consider the wide choice of generators, all made entirely of stainless steel. It includes a Microprobe Generator small enough to fit into a standard cuvette (for samples as small as 1 ml or less), Anaerobic Generators for aerosol-free homogenization, a Mechanical Seal Generator to

minimize contamination and cleaning problems, even an in-line bench-top unit that homogenizes without admitting air.

Consider its unique method of tissue destruction, a combination of ultrasonic energy and mechanical shearing action, based on the Willems High Frequency Principle.

Consider the optional electronic speed control unit, with its sensor that continually monitors the actual speed and keeps it constant, regardless of load.

From any standpoint, nothing compares with a Brinkmann Homogenizer. For literature, write Brinkmann Instruments, Inc., Subsidiary of Sybron Corporation, Cantiague Road, Westbury, N.Y. 11590 or call toll-free 800/645-3050. In Canada: Brinkmann Instruments (Canada), Ltd.
