Another useful innovation in centrifugation.

The only tool you need.

With new OptiSeal™ ultra-centrifuge tubes from Beckman, a fast, reliable seal is right at your fingertips.

Simply insert the tube plug, press, and an o-ring seals securely against the inner surface. During centrifugation, the combination of *g*-force and hydrostatic pressure virtually guarantees a fool-proof seal. No tools. No heat. Finger pressure is all that's needed.

For easy filling, the wide mouth of the OptiSeal tube accommodates standard application pipettes.

An optional tube rack secures up to eight tubes, allowing you to seal them simultaneously or collect fractions from either the sides or the bottoms.

Tubes are conveniently packaged in recyclable eight-packs that are lint-free for spotless tubes, right out of the box.

For more information, contact Beckman Instruments, Inc., 2500 Harbor Boulevard, Fullerton, CA 92634-3100. (800) 742-2345. Offices worldwide.

Which Would You Prefer?

Mineral Oil.

When standard PCR conditions are used, including mineral oil overlay, the 115-bp specific PCR product generated from a 10-copy HIV-1 target (in 1 μ g human DNA) cannot be distinguished from nonspecific amplification products without probing.

Pre-PCR mispriming and primer oligomerization prior to initial denaturation make it difficult to detect low-copy-number targets in high-DNA background.

AmpliWax™ PCR Gems.

AmpliWax PCR Gems provide a solid barrier to separate reaction components prior to heating, facilitating the Hot Start™ technique and improving specificity, yield and precision. Here, amplification of the same 10-copy HIV-1 target yields a clearly detectable PCR product in an ethidium bromide-stained gel after 40 cycles.

Use AmpliWax PCR Gems as a uniform vapor barrier during all PCR amplifications, eliminating messy and imprecise mineral oil addition and post-PCR chloroform extractions. Use them also as a leakproof protective seal over reagent premixes and post-PCR products.

AmpliWax PCR Gems.

**Another Perkin-Elmer Cetus innovation. Backed by our
PCR Performance Guarantee.**

If You Haven't Tried Our New BLAST™ Kits, Look What You've Been Missing.

Two-fold serial dilutions of Rabbit IgG were spotted onto Du Pont's PolyScreen PVDF transfer membrane (1 μ L aliquots starting at 1 μ g/mL). Spots were then detected using AntiRabbit-IgG-HRP and DAB, either unamplified (Panel A) or with Du Pont's BLAST amplification systems (Panel B).

Introducing The Most Flexible Amplification Systems For Western Blotting.

It's easy to see why BLAST systems are the NEN® kits for Western blotting amplification with the distinct advantage. Because they offer you the sensitivity of unamplified chemiluminescence—without a darkroom. Plus unsurpassed flexibility, thanks to Du Pont's new exclusive catalyzed reporter deposition technology.^{1,2}

Use BLAST to amplify the detection

of any protein, using either horseradish peroxidase or alkaline phosphatase. BLAST can improve the sensitivity of your detection and help you conserve critical reagents at the same time.

For optimum Western blotting sensitivity, nothing beats our new PolyScreen PVDF membranes, the ideal partner for BLAST.

See for yourself why BLAST kits and PolyScreen PVDF membranes are the most flexible Western blotting systems available today. Call your Du Pont representative for details. For information by

fax 24 hours a day, 7 days a week, call Du Pont FaxBack® at 1-800-666-6527 (or 302-892-0616) and request document #2327. It will make a visible difference in your lab.

ORDERING INFORMATION/CAT. NO.

BLAST blot amplification systems:

- NEP-117 for horseradish peroxidase
- NEP-118 for alkaline phosphatase

PolyScreen PVDF membranes/NEF-1000

This Week in SCIENCE

Multiple elements

Structural studies of an autonomously replicating sequence, *ARS1*, in yeast show that this replication origin has a modular structure that includes one essential element (A) and three additional elements (B1, B2, and B3), which are redundant and yet functionally distinct. Marahrens and Stillman (p. 817) performed functional studies of linker substitution mutations constructed across the entire *ARS1* origin. Element B3 binds a transcription factor, ABF1, but other transcription factor binding sites can substitute for it. The yeast replication origin is similar to eukaryotic promoters, with the A element resembling the TATA box and the B elements resembling activators.

Below Triton's frost

Voyager revealed that Triton is geologically young and covered with a relatively smooth icy frost. Although geyserlike plumes were seen, large-scale volcanic features or edifices that could account for extensive surface reworking were not immediately evident. Helfenstein *et al.* (p. 824) processed Voyager images and looked at albedo contrasts below the surface frost layer. Three large quasi-circular features that may be volcanic in origin were revealed; the largest is 935 kilometers across and has a dark center region surrounded by a bright annulus.

Fractal landscapes

Fractal analysis has suggested that drainage patterns in landscapes are scale-independent; the same general morphology is evident in gullies and mountainsides. Montgomery and Dietrich (p. 826) examined this hypothesis in a field study of a variety of landscapes. Relations among drainage area, slope, and basin length indicated that there is a threshold between channeled and unchanneled regions that is related to the drainage area necessary to support a channel. Once formed, however, drain-

ages appeared to be similar across a variety of scales. Expansion or retreat of channels at the smallest scale in response to climate change may depend on changes in the channelization threshold.

Simulated diamond

Molecular dynamics simulations of the growth of diamond films on the {001}(2×1) reconstructed surface from small hydrocarbon molecules suggests that a dimer-opening mechanism initiates growth. Garrison *et al.* (p. 835) used an empirical many-body potential function that allows reactions to be included in the simulation. Adsorbed $-CH_2$ species were found to insert into the strained C-C dimer bond, whereas $-CH_3$ species could not.

Gene transduction

The proviral DNA copy of a retrovirus can be integrated within or near a proto-oncogene; if the cleavage or polyadenylation events at the end of the transcription process do not occur, then transcription can "readthrough" into the oncogenic sequence. These transcripts can be packaged into viral particles, and the cellular sequence can be incorporated into provirus by illegitimate recombination. This mechanism for oncogene transduction has been mimicked in a tissue culture system by Swain and Coffin (p. 841), who used Rous-associated virus and a cassette containing the *neo* gene as a marker. The observed transduction events need not have involved deletions in the cellular DNA.

Chinese fossil bird

A sparrow-sized skeleton from Lower Cretaceous lake deposits represents a new bird species, *Sinornis santensis*, and provides important clues to the early evolution of flight. The 135-million-year-old fossil, described by Sereno and Rao (p. 845; see

news story by Barinaga, p. 796), is strikingly complete and fills an important gap between the oldest bird, *Archaeopteryx*, and Late Cretaceous birds that show advanced flight apparatus. The skull and skeleton of *Sinornis* share a number of primitive features found so far only in *Archaeopteryx* among the birds. However, *Sinornis* also has advanced characteristics directly related to flight or perching. The appearance of these capabilities in *Sinornis* suggests that only 15 million years after *Archaeopteryx* birds had shifted to arboreal habitats, and in this case an inland habitat as well.

Early chemistry

In the prebiotic world, molecules that reacted in a cooperative way and catalyzed their own formation could have proliferated, only to mutate and create new molecules that could compete with the old forms and replace them. Hong *et al.* (p. 848; see news story by Amato, p. 800) have modeled such processes with synthetic replicators, molecules that catalyze their own formation and that form self-recognizing structures analogous to nucleic acids. Two such molecules were synthesized that cooperate; they catalyze each other's formation. A mutant produced by irradiating one of the molecules proved to be a superior replicator.

Kinase cascade

Mitogen-activated protein (MAP) kinases are serine-threonine kinases that are activated by phosphorylation on tyrosine and threonine in cells stimulated by a variety of growth factors. Ettehadieh *et al.* (p. 853; cover) show that $p56^{lck}$, a member of the Src family of tyrosyl kinases, phosphorylates and activates a MAP kinase in T cells stimulated through the CD4 surface antigen. Because other serine-threonine kinases are potential substrates of MAP kinases, activation of Src family tyrosine kinases may lead to a cascade of sequentially activated protein kinases.

Wouldn't It Be Nice If Automated DNA Sequencers Spoke The Same Language As Researchers?

How most automated sequencers read data.

How most researchers read data.

Why be forced into reading chromatogram-like peaks when you can see your data the way you're used to seeing it: as sequence ladders.

The new BaseStation™ Automated DNA Sequencer from Millipore reads, analyzes and presents data as familiar four-lane sequence ladders. In fact, it's the only sequencer to display data this way.

The system is able to accomplish this because of the novel way it looks at DNA fragments in a gel. Light emitted by fluorescing DNA is captured inside a charge coupled device (CCD) camera. The CCD is a matrix array of thousands of individual detectors, each capable of registering a single photon of light. This lets the camera see DNA as well-defined bands, allowing for accurate interpretation of data.

Up to 20 kb of primary sequence can be analyzed every day. Over 500 bases are run per sample, with 98% of the first 400 identified

unambiguously by the BaseStation system.

The BaseStation system also analyzes your data in real time. A Fluorogram™ (similar to an autoradiogram) is displayed on screen as the bands move down the gel, so you can assess the quality of the sequencing chemistry. A typical run takes 7 hours, including pre-electrophoresis and loading. When it's done, so is your analysis.

And our DNA Sequence Manager makes reviewing data simple. It automatically generates "contigs" from your sequence sets. And to aid in resolving areas of ambiguity, the system can also display the original Fluorogram image.

For a demonstration or more complete information, call 800-225-1380 in the U.S.; in Japan call (81) (3) 3474-9111; and in Europe call Dick Barker at (33) 1.30.12.72.34.

Pure mRNA in Minutes...

...Directly from Small or Large Samples of Cells or Tissue.

FastTrack™ and MicroFastTrack™ set the industry standard in high quality mRNA isolation.

MicroFastTrack™*: 20 Reactions

- Ideal for PCR, Northern and cDNA synthesis
- Isolation from samples ranging in size from 10^{-3} to 10^6 cells or 10-250mg of tissue.
- Reproducible yields of high quality mRNA.

FastTrack™*: 6 Reactions

- mRNA isolation for Northern, cDNA, library construction, PCR, microinjection, RNA protection studies and *in vitro* translation.
- Isolation from samples ranging in size from 10^7 to 10^8 cells or 0.4-1.0 gram of tissue.
- Fast, efficient recovery of large amounts of polyA⁺ RNA from a variety of sources.

Both systems offer:

- High yields of intact mRNA with low ribosomal contamination.
- Eliminate the need for total RNA isolation or the use of toxic chemicals.
- The most cost effective means of generating high quality mRNA.
- Consistency, convenience and the fastest isolation time.

For the very best in direct mRNA isolation FastTrack™ and MicroFastTrack™ are the choice of thousands of research labs worldwide. When the quality of your mRNA is important, turn to the original source for purity, reliability and convenience; turn to Invitrogen.

Transformation You Can Bank On

Introducing the Economical and Efficient E. coli Pulser™ Transformation System

Bio-Rad offers a complete *E. coli* electro-transformation system in the *E. coli* Pulser and Electro-Competent® *E. coli* cells. Designed to be economical, the system delivers precisely and exclusively the conditions required for the electroporation of *E. coli*. It provides you with the high efficiencies obtained only with electroporation, whether your application is construction of clone banks or mutagenesis. The system builds on Bio-Rad's established reputation for supplying a complete line of excellent gene transfer products. Our newest additions offer you the means to transform *E. coli* conveniently, consistently, reliably, and safely. You can bank on it!

For more information on our new *E. coli* Pulser transformation system call 1-800-4BIORAD.

Electro-transformation efficiencies (transformants/μg plasmid DNA) obtained with 12 different strains of *E. coli* using the *E. coli* Pulser and 0.1 cm cuvettes.

INSIGHT™

Laser Scanning
Confocal
Microscope

REAL TIME... REAL COLOR... REAL EASY!

- * Use the affordable **INSIGHT** laser scanning confocal microscope as you would an inverted fluorescence scope. Place your sample on the stage, and view it via the oculars in phase, DIC or confocal fluorescence . . . in Real Color and in Real Time. If you see a field of interest, photograph it . . . simply and in Real Color using an optional automatic photomicrographic system with 35 mm or Polaroid™ back.

and

- * Use the affordable **INSIGHT** laser scanning confocal microscope as a confocal image acquisition system for your existing video-based imaging computer. Interfacing is . . . Real Easy . . . simply attach your camera to the **INSIGHT**'s standard C mount.

and

- * Use the affordable **INSIGHT** laser scanning confocal microscope as a complete confocal imaging and quantitating system by using the **INSIGHT-IQ™** computer system. Highly advanced hardware and software utilizing simple pull-down menus allow you to acquire and quantitate 2D confocal images in space and/or time, and generate 3D reconstructions and rotations.

Real Time . . . Real Color . . . Real Easy . . . all yours with the **INSIGHT** laser scanning confocal microscope. Contact Meridian today and select the **INSIGHT** model that's right for you. You'll be surprised at how affordable your choice will be.

Cos 7 cells stained with PI and NBD-Phalloidin.

We built a better mousetrap.

Even laboratory mice can be cagey. Trying to keep tabs on them for purposes of identification in research has been awkward, time consuming and expensively inaccurate.

Until BioMedic came along.

Using microcomputer technology, we created a system in which a tiny little radio transmitter is harmlessly implanted under the skin. When our 'magic wand' is waved near the animal, it energizes the transmitter and tricks it into revealing its encoded number. This signal is then picked up by the wand and, along with other vital information on the animal's condition, is recorded in our 'clipboard' control unit.

For at least the next 34 billion subjects, of any species, no two individuals can ever have

the same monicker.

BioMedic calls this the Electronic Laboratory Animal Monitoring System (ELAMS™). And it is truly revolutionizing lab practices. Not only does it represent a quantum leap in the degree of identification accuracy, it also means greatly improved data collection efficiency and information security. And all of that means money saved and invaluable research protected.

Of course, some people still use ear tags and tattoos as animal I.D.'s. But then some folks still bait spring traps with swiss cheese.

For more information on ELAMS call.....

Engineering a Small World: From Atomic Manipulation to Microfabrication

All orders must
be prepaid.
Payment in U.S.
dollars only. Bulk
rates available.

This 42-page special section, reprinted from the 29 November issue of **SCIENCE**, is your entry to the expanding world of small-scale engineering. It's a field that spans microelectronics, materials science, chemistry, molecular biology, and microscopy. In this special section, ten illustrated articles by research leaders and by science journalists present the full scope of this small world.

For each copy, send \$4.00 plus \$.50 for postage to:

Discover new solutions

"I've got lots of LC questions."

This new detector answers the tough ones."

"The Isco UA-6 is easy to use."

Built-in recorders have always been a favorite convenience feature of Isco LC detectors, along with the remote optical units that fit right where you want them. The new UA-6™ adds an autobaseline function, and puts all its power at your fingertips with only half the knobs you'll find on systems with separate recorders.

"I can count on top performance with any job."

Choose the right UV or visible wavelength for anything from aflatoxins to xanthenes. Interchange flow cells optimized for low pressure LC to microbore HPLC. Linear response over wide sensitivity

ranges – plus active, distortion-free noise filtering – assures accurate and trustworthy results.

"It gives me no-miss peak collection."

The built-in, slope-sensing peak detector controls your fraction collector to cut peaks at their real beginnings and ends.

"It won't let me down, even in the coldroom."

Active anti-condensation protection assures years of trouble-free service in damp coldrooms. Lamps are long-lived, flicker-free, and inexpensive. And reliability of UA-6's basic design has been proven in Isco's 30-plus years of setting the standards for LC detectors.

"It saves my bench space."

UA-6 takes only half the area of a conventional detector and recorder.

After 12,000 Isco UA-5 detectors, the UA-6 is here. Call now **(800)228-4250** or contact your Isco distributor to learn how the new UA-6 can help solve your LC problems.

CALL FOR PAPERS

Because some information is
too important to wait for.

Susan Wise/American Medical News

Your vital research can be published with unprecedented speed in a revolutionary new journal.

The Online Journal of Current Clinical Trials will combine the rigorous editorial standards of the most prestigious research journals with the immediacy and power of the latest technology.

This revolutionary publication will be accessed online via computer. *The Online Journal of Current Clinical Trials* articles will be delivered simultaneously to researchers and the media world-wide *within 24 hours of acceptance*.

The Online Journal of Current Clinical Trials will deliver peer reviewed research of the highest quality. Not just abstracts, but full text, with charts, tables and graphs. And with typeset quality text and graphics, it even looks like a printed journal. But thanks to online technology, it delivers unequaled speed and a host of other benefits. All for the same subscription cost of a print journal.

Just \$110 per year—and no connect time charges!

- No page limitations—eliminating delays and allowing publication of more articles important to specialized disciplines.
- Simultaneous world-wide release to researchers and the media—no media embargoes, no mail delays, no lost copies.
- Hard copy available by fax or by mail—when you need reprints.
- Electronic or mail submission of articles—to speed the editorial process.
- Outstanding new capabilities to help readers—including sophisticated search and retrieval, automatic fax alert to articles of interest, hypertext link to MEDLINE references, and much more.

SCIENTIFIC
SOLUTIONS

The Lab Master data acquisition computer offers a great value!

■ Features

- 386/25 Mhz VGA computer system
- FREE Windows 3.0, DOS 5.0, and mouse
- 120 Mb hard disk
- LabRack BNC termination
- One year warranty
- 486 computers and peripherals available

■ Benefits

- Computer systems for Life Science, Medical, Academic, and Research applications
- FREE hardware and software application assistance
- Wide Selection of data acquisition software and hardware products
- The computer and data acquisition products may be purchased separately

*Exclusively

**With enough
patience, you can
perform any
2D measurement
with this
equipment.**

**Save yourself a lot
of trouble.**

Put your planimeter, ruler, and calculator away. Use SigmaScan™ instead.

With SigmaScan, it takes only seconds to measure angles, areas, lengths, perimeters, slopes, and points and analyze the data on your own IBM PC or compatible. Each measurement is organized in a worksheet the way you want it, with the units you specify. You can even transform data based on your equations, and store data in standard ASCII files for use in other programs. SigmaScan, it takes the trouble out of 2D measurement.

For free brochure, call 800-874-1888 (415-453-6700 in CA and Canada).

CONFERENCE ON APPLICATIONS OF ADVANCES IN TOXICOLOGY TO RISK ASSESSMENT

**May 19, 20, and 21, 1992
Dayton, Ohio**

The conference will be held at the Hope Hotel and Conference Center located on Wright-Patterson Air Force Base and will be sponsored by the Toxicology Division, Occupational and Environmental Health Directorate, Armstrong Laboratory; the Naval Medical Research Institute Detachment (Toxicology); and the Army Biomedical Research and Development Laboratory.

The conference will be divided into five sessions and will feature invited presentations by noted individuals in the field. A poster session for studies relevant to the conference theme will also be a part of the conference. Individuals interested in presenting a poster should contact the Conference Coordinator. **Poster abstracts must be received by April 3, 1992.**

The session titles are:

**SESSION I —HEALTH ASSESSMENT OF HALON
REPLACEMENTS**

**SESSION II —ALTERNATIVES TO ANIMALS IN
TOXICOLOGY RESEARCH: POLICY
CONSIDERATIONS**

**SESSION III—APPLICATIONS OF PHARMACOKINETICS
IN RISK ASSESSMENT**

**SESSION IV—SELECTED MECHANISMS IN
CARCINOGENICITY**

**SESSION V —ADVANCES IN THE ASSESSMENT OF
TOXICOLOGICAL ENDPOINTS**

To obtain further information, contact Ms. Lois Doncaster, Conference Coordinator, ManTech Environmental Technology, Inc., P.O. Box 31009, Dayton, Ohio 45431-0009. Phone: (513) 256-3600, extension 212.

Recognition Reconnaissance

International Industrial Biotechnology Conference

Montreal, Canada, June 1 - 4 1992

HONOURARY CO-CHAIRS

Prof. Sidney Altman
Yale University, US

Dr. Kazutomo Imahori
President, Mitsubishi Kasei Institute
of Life Sciences, Japan

Dr. Julia Levy
President, Quadra Logic Technologies
Inc., Canada

Dr. Alain Mérieux
President, Institut Mérieux, France

Dr. Setijati Sastrapradja
Centre for Research in Biotechnology,
Indonesia

PROGRAM

The program includes a three-track
approach:

BIO-SCIENCE:

discussion of leading edge research on
ribozymes; antisense; genomics; protein
structure and function; protein design;
growth factors; lipids; and glycobiology.

BIO-TECH:

discussion of protein synthesis;
expression systems; adsorption of
proteins to solid surfaces; nucleic acid
sequencing; RFLPs; miniaturized
biosensors; drug delivery systems; use
of oligonucleotides, peptides and Mabs
for identification; and carbohydrate-
related technologies.

BIO-BUSINESS:

discussion of different approaches
to investment in biotechnology by
financial companies; a hands-on
workshop on how to pitch to the
financial community; sessions on
intellectual property and patent law;
regulations (health, safety and field
testing); taking your company abroad;
shaping your corporate structure; and
a look into the future - biotechnology
and the quality of life.

Speakers include:

Sidney Altman
Yale U., US

Lisa Conte
Shaman Pharmaceuticals, US

William DeGrado
Du Pont, US

Wayne Gerlach
CSIRO, Australia

Andrew Griffiths
MRC, U. of Cambridge, UK

Claude Hélène
Musée national d'histoire
naturelle, France

Jack Johnson
Purdue U., US

Steve Kent
Scripps Institute, US

Aaron Klug
MRC, U of Cambridge, UK

Ken Lee
Ernst and Young, Palo Alto, US

Anant Menon
Rockefeller U., US

Joseph Mol
U. of Amsterdam, Holland

Marc van Montagu
U. of Ghent, Belgium

Tony Pawson
Toronto Mount Sinai Hospital, Canada

Lloyd Smith
U. of Wisconsin, US

Alexander S. Spirin
Institute of Protein Research, USSR

Olke Uhlenbeck
U. of Colorado, US

Shoshona Wodak
Free U. of Brussels, Belgium

Ron Worton
Toronto Sick Children's Hospital,
Canada

Paul Zamecnik
Worcester Foundation, US

Norton Zinder
Rockefeller U., US
