The "Exploratory Moon-Probe Lunacycle 'M.A.U.D.' [Manually Assisted Universal Deviator]" by Rowland Emmett. According to Emmett, "The Lunacycle is intended to be soft-landed on the Moon . . . the side wheels may possibly be aligned to different points of the compass, a sure sign that the machine is poised and ready to dash off in all directions . . . the first principle in science is to invent something nice to look at and then decide what it can do . . . Should the Lunacycle fail as a space vehicle it can be marketed as a domestic carpet sweeper to be ridden up and down the corridors and staircases of some of the more solvent stately homes."
