

Hawkins of Dorset, a 19th-century "eccentric" who shares honors in the book with Mary Anning; and Louis Agassiz of Harvard, whose lithographic plates of fossil fish are juxtaposed with photographs of the specimens. The accounts of these personages and their activities are not straightforward biographical accounts but belong more to the genre of the familiar essay for which Gould is well known, with many divagations on topics larger and smaller. Apparently intended for only the most casual of readers, the book includes no bibliography for those whose appetite might have been whetted for a less episodic treatment, nor even an index or informative table of contents for those who might want to reread choice bits before moving on to other pursuits.—*Katherine Livingston*
