AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

# Do Your *E. coli* Cells Have Mammalian Envy?

**BL21-CodonPlus® competent cells\*** dramatically improve protein expression in *E. coli* by overcoming the problem of codon bias. You get the ease of use and high yield of an *E. coli* expression system without the failed expression that results from codon bias. We added extra copies of tRNA genes that are rare in *E. coli* but used more frequently by other organisms to correct codon bias for faster, easier, and inexpensive expression of proteins from other organisms. BL21-CodonPlus competent cells are available in variants to suit your genome and level of expression control.

## Optimized protein expression host

- Dramatically improves expression when codon bias is a problem
- RIL strain for AT rich genomes
- RP strain for GC rich genomes
- For proteins from all organisms, not just mammalian

Don't let codon bias prevent you from expressing in *E. coli*!

On-target results.  
One easy process.

# MagicMark™ Western Standard.

Go ahead, take direct aim. With MagicMark™ Western Protein Standard from Invitrogen, you can bypass the maze of steps that conventional standards require. Visualize standard bands and your target protein simultaneously on western blots—and see superior results.

**One-step accuracy.** MagicMark™ lets you estimate molecular weight directly on your western blot. No aligning. No marking. No extra reagents. Simply load MagicMark™ onto your gel, then electrophorese and perform the immunoassay of your choice. You'll spot standard bands together with your target protein, minimizing errors.

**MagicMark™ detected  
simultaneously  
with target protein**

**Superior results.** Capture clear, sharp MagicMark™ bands with the same conjugated antibody and protocol you use to detect your target

protein. Choose chemiluminescent or colorimetric detection methods for your analysis. Because they are not chemically modified, MagicMark™ proteins offer superior sizing accuracy. Eight distinct bands let you easily identify your protein of interest on your blot (see figure).

**Land on target.** When you need a protein standard for western blots, get the accuracy and convenience that only MagicMark™ can deliver. To learn more, call Invitrogen today or visit us at [www.invitrogen.com/magicmark](http://www.invitrogen.com/magicmark).

# IT'S EASY TO **Spot** THAT WE'VE GOT PROTEOMICS IN OUR GENES

With so many protein samples to select and analyze, wouldn't it be ideal to have a truly integrated 2D-MS solution? One that tracked every sample, ran every method and handled every activity? As well as giving you control over all the processes in your protein analysis? Now you get it all, thanks to new additions to the Ettan™ platform.

## **The new Ettan Spot Handling Workstation and LWS: enabling truly integrated 2D-MS protein analysis**

The new Ettan Spot Handling Workstation incorporates robotic solutions to pick your selected protein spots from 2-D gels for digestion, then transfers the peptides to MALDI-ToF MS targets for identification. This eliminates the need for hands-on operation, dramatically increasing the reliability of your results and significantly increasing throughput levels.

Based on our understanding of your needs, and our well-proven 2-D electrophoresis technology, we've developed this integrated system controlled by Ettan LWS to give you results you can trust. Hear what our customers have to say at:

**[www.proteomics.amershambiosciences.com/2dms](http://www.proteomics.amershambiosciences.com/2dms)**

Put our over 50 years of experience in proteomics to work for you. And find out that anything is possible.

#### Ectodermal Wnt Function as a Neural Crest Inducer

M. I. García-Castro, C. Marcelle, M. Bronner-Fraser

A Wnt signal induces neural crest tissue in the developing chick embryo.

#### Biallelic Inactivation of *BRCA2* in Fanconi Anemia

N. G. Howlett *et al.*

PERSPECTIVE: **D-Day for *BRCA2*** E. Witt and A. Ashworth

A small subset of patients with Fanconi Anemia have biallelic mutations in the breast cancer susceptibility gene *BRCA2*, which suggests a link between two key pathways in the cellular response to DNA damage.

#### Regulation of Hypoxic Death in *C. elegans* by the Insulin/IGF Receptor Homolog DAF-2

B. A. Scott, M. S. Avidan, C. M. Crowder

Insulin signaling functions in oxygen utilization in the nematode.

## TECHNICAL COMMENTS

### Global Allocation Rules for Patterns of Biomass Partitioning

Enquist and Niklas (Reports, 22 February 2002, p. 1517) quantified the allocation of plant biomass among stems, leaves, and roots for a broad range of seed plants inhabiting diverse ecosystems, and they proposed a general allometric model that predicts how these plant organs should scale in relation to one another and "helps identify the biophysical constraints acting on allocation tradeoffs in plant biology." Sack *et al.* comment that the model "falls short in a number of important respects" when applied to plants during early ontogeny, "a crucial period for plant establishment," during which biomass allocation and scaling follow rules different from those for mature plants. In response, Enquist and Niklas acknowledge that "allometric relationships for early ontogeny may be very different," but maintain that their model is robust and accurately predicts scaling relationships among leaf, stem, and root biomass for multiple plant species across several orders of magnitude.

The full text of these comments can be seen at

# The Beauty of Discovery

Whatever your inspiration, Bio-Rad has the right combination of products and experience to help you explore it.

You never know where or when new discoveries will appear. At Bio-Rad, our job is to help you find them. As a leading supplier to the life science community for 45 years, we've been in a unique position to do just that.

Today, Bio-Rad offers 3,500 quality products to scientists in 74 countries. We are a leader in electrophoresis, proteomics, imaging, gene transfer, and BSE (mad cow disease) testing. And we're setting new

standards with our real-time PCR, biochromatography, protein array systems, and bioeducation programs.

Even more, our expert sales and technical support teams are always ready to help with fast, professional service. Plus, you have the confidence of knowing that our new web site gives you access to a full range of

Bio-Rad products and services any time of the day or night. And that's a beautiful thing.

Visit us on the Web at [discover.bio-rad.com](http://discover.bio-rad.com)

# THIS WEEK IN Science

edited by Phil Szuromi

## Elements of Magnetic Logic

A magnetic-based switching architecture has been proposed to operate at much lower power consumption than conventional electronics-based circuitry. However, viable demonstrations of dynamical logical elements that can couple to similar magnetic elements have so far been lacking. Combining the motion of a magnetic domain wall in a rotating magnetic field and micropatterned magnetic wires, Allwood *et al.* (p. 2003; see the news story by Cho) demonstrate a logical NOT-gate, or inverter, by patterning thin layers of ferromagnetic permalloy. As the domain wall moved through the junction, the magnetization in the wires on either side of the junction was reversed. Scalability was also demonstrated by coupling several of these inverter junctions together to form a shift register.

## Excited But Orderly

Many physical and biological systems contain an excitable medium that can support wave propagation, and several approaches have been used to control their direction. Sakurai *et al.* (p. 2009; see the cover) now demonstrate a very high level of wave front control in the chemical waves that form in the Belousov-Zhabotinsky reaction. By using feedback methods, they can use light to create gradients in the concentration of photosensitive catalysts in a thin-film gel realization of this reaction. The wave fronts can then be steered to form complex patterns. ✕

## Getting Oriented

Layered ferroelectric thin films have potential applications as dynamic random access memory (DRAM). One material that has been studied for this purpose is a La-substituted  $\text{Bi}_4\text{Ti}_3\text{O}_{12}$ , known as BLT. Although BLT will readily grow onto substrates, it does so with an orientation that causes the remnant polarizability to lie in the plane of the substrate. However, for DRAM applications, the remnant polarizability needs to be perpendicular to the substrate. Lee *et al.* (p. 2006; see the Perspective by Ramesh and Schlom) demonstrate the growth of BLT crystals with the preferred (100) orientation, almost to the exclusion of all other orientations.

## Large Slip in the Tibetan Plateau

The collision of India into Eurasia created several parallel east-to-west trending strike-slip faults on the Tibetan plateau that accommodate some of the head-on, continent-to-continent collisions. Although there have been many large-magnitude earthquakes on these faults, geo-

## 1999 The Timing Is Crucial

Plastic modification of synaptic connections that depends on the precise timing of pre- and postsynaptic action potentials has been described in several *in vitro* preparations. However, it is unclear if the same phenomenon can also be observed *in vivo*. Fu *et al.* (p. 1999) describe timing-dependent plasticity of synaptic connectivity as well as of receptive field topography in the adult cat visual cortex. They also provide psychophysical evidence that comparable effects occur in the human visual system.

## And in Brevia ...

High-surface-energy, mesoporous oxide templates have been used by Steinhart *et al.* (p. 1997) to synthesize nanotubes from many polymeric materials with uniform size and length distributions.

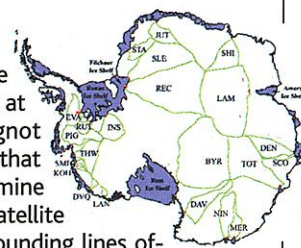

graphic isolation has limited both seismic monitoring and field studies. Lin *et al.* (p. 2015) measured a 400-kilometer-long rupture zone that had as much as 16 meters of left-lateral strike-slip motion caused by the November 2001 Central Kunlun earthquake, which had a surface wave magnitude of 8.1. This study documents the importance of these strike-slip faults for accommodating some of the collision by eastward extrusion of tectonic blocks and provides vital ground truth to supplement remote geophysical modeling.

## Coral Fates Corralled

The determination of species boundaries has been a continuous source of controversy in coral systematics. Using molecular techniques, Vollmer and Palumbi (p. 2023; see the news story by Pennisi) show that some Caribbean coral species generate morphologically distinct first-generation sterile hybrids that have little evolutionary potential but can asexually propagate effectively immortal clones. Many of these clones are sufficiently distinct to have been given their own species names, despite being evolutionary dead-ends. These results not only pave the way for more rational systematics of corals, but also have implications for evolutionary theory in general.

## More Rapid Retreat

Continental ice sheets that extend into the sea, like those in Antarctica, begin to float at a location called the grounding line. Rignot and Jacobs (p. 2020) surveyed 22 glaciers that flow off the Antarctic Ice Sheet and examine their interactions with the ocean. Their satellite interferometry observations show that grounding lines often lie tens of kilometers landward of their previously estimated locations. Rapid basal melting occurs near the grounding lines of these ice shelves, and floating glacier tongues make the ice sheets vulnerable to ongoing ocean warming. The 0.2°C increase in ocean temperature that has been measured near the edges of Antarctic ice sheets during recent decades is sufficient to have increased rates of basal melting by 2 meters per year and may explain the rapid thinning observed for ice shelves in some parts of Antarctica.

## Microbial Forensics

In the wake of the recent bioterrorism incidents involving the contamination of the mail with *Bacillus anthracis*, there has been renewed interest in establishing relationships among isolates of organisms with highly conserved genomes. Read *et al.* (p. 2028; see the Perspective by Cummings and Relman and the 10 May

# We've merged to cure cancer faster

## Announcement

The Cancer Research Campaign and Imperial Cancer Research Fund have merged to create one organisation: **Cancer Research UK**.

The new organisation has been established to protect and promote the health of the public by research into the nature, causes, diagnosis, prevention, treatment and cure of all forms of cancer, and combines the strengths of the former organisations whose areas of activity will continue to be supported.

Cancer Research UK will fund a wide range of activities within the UK, including basic research, epidemiological studies, education and psychosocial research, clinical research and trials and translational research. A range of funding mechanisms will be used to help link these activities, and the organisation will take a particular interest in the training and development of clinical and laboratory researchers.

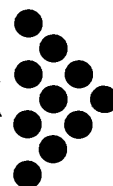

The new organisation will promote collaboration with research partners around the world and will work closely with UK national bodies, such as the recently established National Cancer Research Institute, to help meet the objectives of the organisation.

For information on research groups, research funding and research vacancies, please consult the science and research section of the website:  
<http://science.cancerresearchuk.org>

**Dr Paul Nurse**  
Interim Chief Executive,  
Cancer Research UK

**CANCER RESEARCH UK**

news story by Enserink) have used comparative whole-genome sequencing and polymorphism analysis to classify nine closely related isolates of *B. anthracis* that were not distinguishable with existing genotype data. ✕

### AIDing and Abetting Mutation

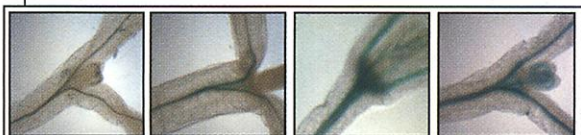

The proposed RNA editing enzyme, activation-induced cytidine deaminase (AID), plays a critical role in increasing antigen affinity both by switching gene segments that encode different classes of antibody and in the somatic hypermutation (SHM) of variable coding segments of the same genes. Is AID activity sufficient for generating SHM? Yoshikawa *et al.* (p. 2033) show that AID can induce mutation in an artificial reporter gene cotransfected in a non-B cell line. That AID can act autonomously of B cell-specific factors suggests further clues about its mode of function in regulating antibody mutation in B cells.

### One Tyrosine Short

LAT is an intracellular adaptor protein that becomes phosphorylated on multiple tyrosine residues after T cell receptor activation. Aguado *et al.* (p. 2036) and Sommers *et al.* (p. 2040) report that a single tyrosine residue in LAT, which couples to the downstream signaling molecule phospholipase C- $\gamma$ 1, plays a crucial role in maintaining T cell homeostasis, regulating both early and late T cell development and differentiation. Replacement of endogenous LAT in mice with a form in which Tyr<sup>136</sup> was mutated to Phe caused a partial block in early T cell development. However, over time, the mice developed a fatal lymphoproliferative disorder featuring an overabundance of a particular T<sub>H</sub>2-type cell. One consequence of this paradoxical phenotype was an autoimmune response. The analyses suggest that while a single LAT residue may have a positive function during early T cell development, it may negatively regulate signaling pathways later on during T cell selection and differentiation of T<sub>H</sub>2 effector cells.

### Human Motor Skills and the Cerebellum

The role of the cerebellum in motor learning and performance is still controversial. Seidler *et al.* (p. 2043; see the Perspective by Hazelton and Ivry) used functional magnetic resonance imaging and a sophisticated set of behavioral tasks and manipulations to investigate the involvement of the cerebellum in motor learning. They found that the cerebellum does not play a role in motor sequence learning. It is, however, heavily involved in the expression of information about motor sequences and thus in the modification of performance.

### Plants Coping with Stress

Plants use hydrogen peroxide ( $H_2O_2$ ) as a second messenger in their responses to hormones, pathogen infection, and abiotic stresses.

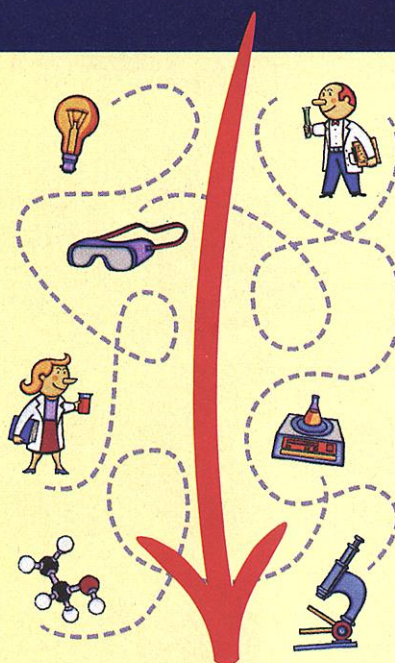

Baxter-Burrell *et al.* (p. 2026) have elucidated a Rop guanosine triphosphatase rheostat, RopGAP4, that fine-tunes the output of  $H_2O_2$  in *Arabidopsis* in response to oxygen deprivation, which happens to plants when their roots are transiently flooded. The  $H_2O_2$  signal in this case induces expression of alcohol dehydrogenase, which enables tolerance to the stressor, and RopGAP4, which represses further  $H_2O_2$  production. As transient flooding, as well as other abiotic stressors, diminishes yield in many crops, manipulation of this Rop rheostat may be useful in developing crops better able to withstand these stressors.

### Detecting a Balmy Day

Researchers have identified the receptor that senses cold temperatures (also triggered by menthol, accounting for menthol's cooling sensation) and hot temperatures (also activated by capsaicin, the "heat" in chili peppers). Both are members of a family of ion channels called transient receptor potential (TRP) channels. Peier *et al.* (p. 2046) now identify another family member, TRPV3, as a "warm" receptor. This cation-selective, outwardly rectifying channel is activated by temperatures between 33° and 42°C and is expressed in the keratinocytes and hair follicles of skin but not in neurons. Although it is not yet known how warm skin cells convey their response to temperature to the nervous system, the identification of this receptor accounts for our ability to discern pleasantly warm temperatures. ✕

What's the  
shortest distance  
between  
two points?

[www.scienceproductlink.org](http://www.scienceproductlink.org)

Find out about products advertised  
in *Science* — instantly.

*Science* announces a great way to find out about new products advertised or featured in *Science* — instantly. *Science's* Product Link is a new online reader service program and online product information service that allows readers to search for products advertised or featured in *Science* by

- product category,
- company name,
- keyword, and
- page number.

You can look for product information in current and back issues. You can even link to advertisers' websites for more information.

If you prefer, you can request to have product information delivered via

- e-mail,
- regular mail,
- telephone, and
- fax.

What's the shortest distance between two points? *Science's* Product Link.

- ⊗ Anti-target screening
- ⊗ Chemical knockouts
- ⊗ Transformation of kinase substrate into drug-like inhibitor
- ⊗ Testing of anti-phosphopeptide antibody specificity

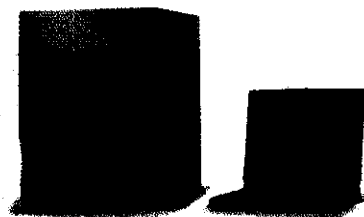

Sequence

Quantitate this.

**The affordable ABI PRISM® 7000 Sequence Detection System.**

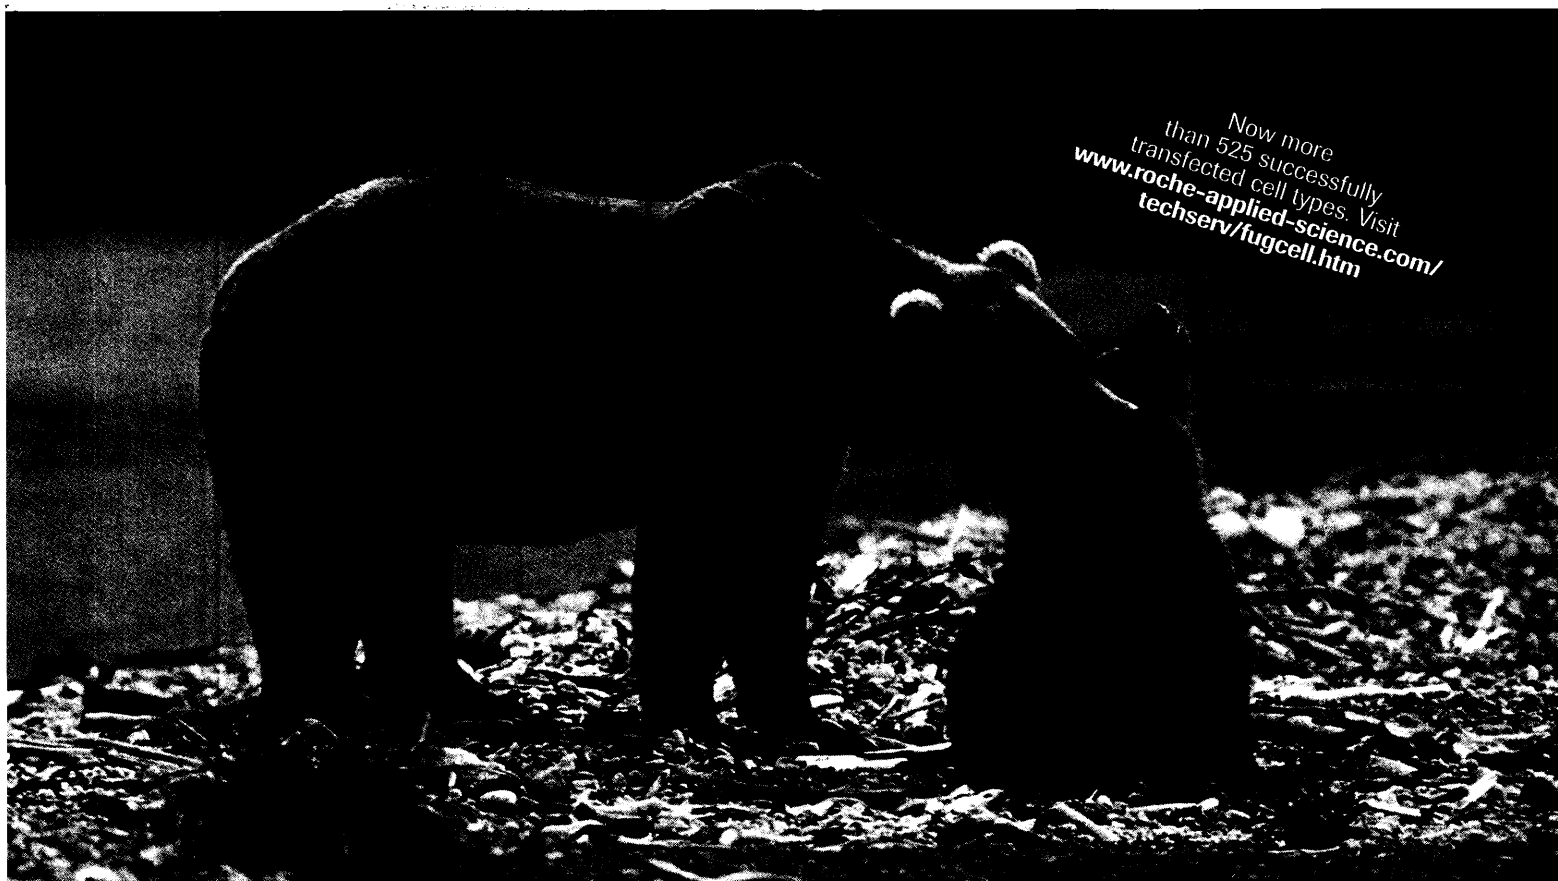

**At this price, can you afford anything less?** What if you could get Applied Biosystems performance and reliability for just a bit more than you'd pay for other real-time PCR systems? Would you pass up the most comprehensive quantitative gene expression capability ever offered at this price? Would you skip the simple, multi-color, real-time protocols? Would you design your assays without our Primer Express® software? In short, once you knew you could afford it, wouldn't you prefer a real ABI PRISM® 7000 Sequence Detection System? Find all the answers, including the surprisingly low price at <http://info.appliedbiosystems.com/7000> or call 1.650.638.5800.\*

**AB Applied Biosystems**

Data. Decision. Discovery.

\*US toll-free: 1.877.287.5700. Applied Biosystems is committed to providing the world's leading technology and information for life scientists. Applied Biosystems consists of the Applied Biosystems and Celera Genomics businesses. For Research Use Only. Not for use in diagnostic procedures. Practice of the patented polymerase chain reaction (PCR) process requires a license. The ABI PRISM® 7000 Sequence Detection System is an Authorized Thermal Cycler for PCR and may be used with PCR licenses available from Applied Biosystems. Its use with Authorized Reagents also provides a limited PCR license in accordance with the label rights accompanying such reagents. Purchase of this instrument does not convey any right to practice the 5' nuclease assay or any of the other real-time methods covered by patents owned by Roche or Applied Biosystems. ## Powerful, Gentle, and Convenient Transfection

Join the increasing number of researchers who have discovered exceptional transfection efficiency and convenience with the unique technology of Roche Applied Science's **FuGENE 6 Reagent**.

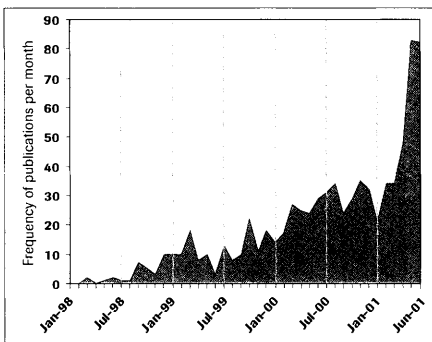

### Eliminate the need to screen different reagents for each new cell type

- Efficiently transfect common cell types such as COS, HEK-293, CHO-K1, and hundreds of others (>525), including primary culture cells.
- Choose FuGENE 6 Reagent if you are new to transfection, or if this is a routine technique used in your laboratory.

### Experience unrivaled ease-of-use

- Extremely low cytotoxicity allows you to save time and eliminate multiple handling steps.
- Avoid the need to change media following transfection, without losing your cells.
- Simply remove FuGENE 6 Reagent from your refrigerator, dilute in buffer, incubate with plasmid for 10 minutes, then pipet directly onto your cells (with or without serum).

**Trust your fellow researchers, and choose the best transfection reagent available**

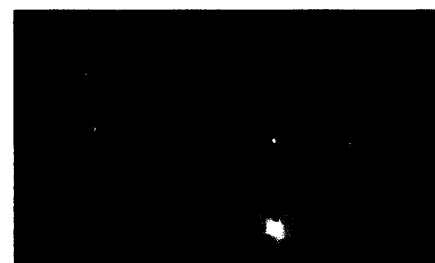

Publications in *J. Biol. Chem.*, *PNAS*, and *EMBO J.* document the successful use of FuGENE 6 Reagent beginning 5 months after the release of product.

FuGENE 6 Reagent is successfully used by researchers around the world and has been featured in over 800 publications.

**Order FuGENE 6 Reagent and start increasing your productivity today!**

Cat. No.	Pack Size (# of transfections/ 35 mm dish)
1 815 991	0.4 ml (100)
1 814 443	1.0 ml (300)
1 815 075	Multi-pack (5 x 1.0 ml) (1500)

You get smart products  
supported by extensive  
and precise research.

He gets hope.

At Pall, our products are fully tested in real-laboratory situations to ensure that we offer proven technologies with reproducible results. Take our microarray slides. They bind cDNA and oligos better than traditional glass, so you require less template and can detect information with optimum accuracy. No surprises, no nagging doubts. Just the results you need, so you can give others what they want. Hope.

## Specialty Cell Culture Media

Minimize adaptation time, improve control, and simplify scale-up with serum-free, protein-free, and chemically-defined GIBCO™ nutrient media optimized for the culture of specific cell lines. Choose the format that suits your system: dry powder, 1X liquid, concentrates, and new Advanced Granulation Technology™.

- Hybridoma Cells
- CHO Cells
- Human Embryonic Kidney (293) Cells
- Neuronal Cells
- Mammalian Cells for Virus Production
- Blood and Bone Marrow Cells
- ES Cells
- Hepatocytes
- Endothelial Cells

To get your new GIBCO™ 2002 catalog, contact your Invitrogen representative.

## Reagents

Choose from a wide selection of cell culture reagents.

- Lipids
- Buffers
- Selective Antibiotics
- New Zealand Origin BSA and other proteins
- Other Custom Reagents

## Primary Human Keratinocytes

Save time with adapted cells. Get confluent, useable cultures in just five days with GIBCO™ Primary Human Keratinocytes.

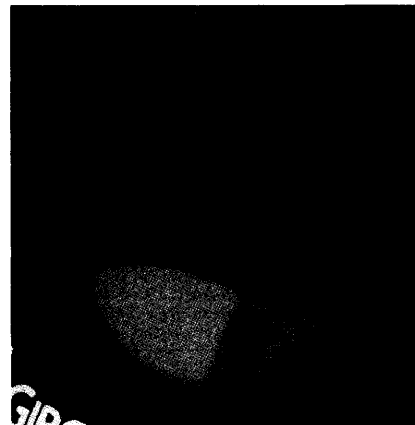

- Cryopreserved in GIBCO™ Defined Keratinocyte-SFM
- Excellent performance
- Economical—1.25 X 10<sup>6</sup> per ampule
- Reliable supply, large lots available

## GlutaMAX™ Media

Avoid L-glutamine degradation. Use GlutaMAX™ Media in cloning assays, toxicity testing, high-density bioreactors, and metabolic studies.

- Prevent L-glutamine decomposition
- Available in many widely used media formulations
- Autoclavable
- Minimize toxic ammonia build-up

## Classical Media

Suitable for the growth of a broad spectrum of mammalian cells, GIBCO™ Classical Media are available in multiple formulations with and without L-glutamine. Choose from three convenient formats: ready-to-use 1X liquid, dry powder, and concentrates.

- Dulbecco's Modified Eagle Media (D-MEM)
- Minimal Essential Media (MEM)
- RPMI Media 1640

Published by the American Association for the Advancement of Science (AAAS), Science serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in Science—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objectives are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, to advance education in science, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

# TIME MACHINE

## The Mini-Prep 48 for Automated Plasmid Mini-Preps

The Mini-Prep 48 is a fully automatic, bench-top instrument that purifies plasmid DNA directly from bacterial cultures.

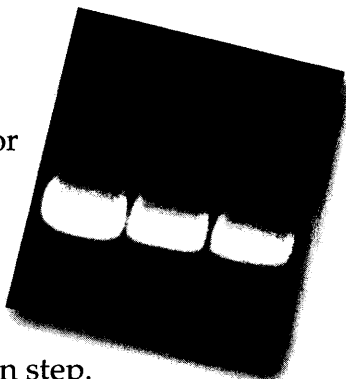

The instrument uses a new method of purification based on agarose gel electrophoresis and recovery by electroelution. Purification is entirely accomplished within pre-manufactured sample cassettes.

Call now to learn how the Mini-Prep 48 can provide you with great, high quality DNA, while saving you time.

**High Purity** – suitable for automated fluorescent sequencing straight from the instrument.

**Easy Operation** – starts with direct loading of culture- no centrifugation step.

**Improved Yields** – up to 6 ug of plasmid per prep.

**Fast** - up to 48 (2 ml) preps per hour, saving you time.

**Cost Effective** – affordable to any lab.

**Quality** - time and time again.

## READER AND ADVERTISER RESOURCES

### Science Careers:

#### SCIENCECAREERS.ORG

##### Job Alerts

Receive free weekly e-mails of the job postings that meet your criteria. All you do is specify the type of job that you're interested in, and let Science Careers do the rest.

Sign up today at  
[www.sciencecareers.org](http://www.sciencecareers.org)

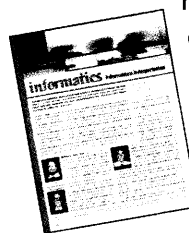

#### FOCUS ON CAREERS

AD SUPPLEMENT IN THIS ISSUE

##### Informatics

The need for smart software programs that will help to organize, analyze, and interpret huge amounts of data has created employment opportunities for physicists, mathematicians, and computer programmers in the life science arena.

Look for the report on page 2058.

### Product News:

#### LAB TECHNOLOGY TRENDS

SPECIAL AD SECTION IN THE 28 JUNE ISSUE

##### Advances in Immunology Research

This section will address recent advances in technologies and products used in immunology research. Key products used to study the immunological response will be covered.

Look for it in the 28 June issue.

#### WWW.SCIENCEPRODUCTLINK.ORG

##### Science Product Link

Science's online reader service system helps you find information on products advertised in the pages of *Science*. Search by product category, company name, keyword, or page number.

Find it all at  
[www.scienceproductlink.org](http://www.scienceproductlink.org).

### Trade Shows & Conferences

LOOK FOR COPIES OF THE 12 JULY ISSUE OF *SCIENCE* AT THESE  
UPCOMING TRADE SHOWS AND CONFERENCES:

**ENZYMES, COENZYMES,  
& METABOLIC PATHWAYS**  
21-26 July, Meriden, NH (GRC)

**MOLECULAR GENETICS**  
21-26 July, New London, CT (GRC)

*GRC—Gordon Research Conferences*

**MEMBRANE TRANSPORT PROTEINS**  
21-26 July, New London, CT (GRC)

For *Science* sales representatives' contact information, please see the previous page.

*Science* is published by The American Association for the Advancement of Science. To subscribe to *Science* and become a member of the AAAS, go to [www.aaas.org](http://www.aaas.org).

Plate Readers

You've never seen plate reading technology this flexible.

Now, with every purchase of a PerkinElmer plate reader, receive **50 FREE PLATES** at the time of purchase AND a **25% DISCOUNT** off your first microplate order!

From Basic Research through Assay Development and High-Throughput Screening, we've got it covered.

Researchers using plate readers have different needs. Different assays, different budgets, different system requirements. PerkinElmer Life Sciences addresses these needs with the most complete line of multi-detection plate readers available.

There's the affordable VICTOR<sup>2</sup> – the market leader. With legendary time-resolved fluorescence (TRF) performance and a host of options and accessories such as reagent dispensers and plate stackers, VICTOR<sup>2</sup>'s capability can expand as your research needs grow.

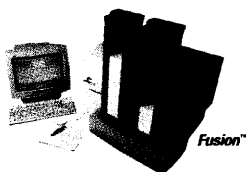

The *Fusion*<sup>™</sup> combines every non-isotopic assay method of detection, including fluorescence polarization and AlphaScreen<sup>®</sup>, into one affordable, high-performance platform.

And finally, the new, state-of-the-art EnVision<sup>™</sup>, optimized for high-throughput screening with fast plate reading speeds and applications flexibility.

For help selecting the plate reader most flexible to meet your needs, call us at 1 800 551-2121 today. Or visit us online at [www.perkinelmer.com/platereaders](http://www.perkinelmer.com/platereaders).

# WE KNOW YOU WANT TO HEAR ABOUT OUR LATEST GENE SEQUENCING FACILITIES AND NEWEST CYTOPLASMIC REPLACEMENT TECHNOLOGY.

BUT DOLLY INSISTS ON TOP BILLING.

*Dolly was the first mammal cloned from an adult cell, refuting the popular belief that cells from adult mammals could not be used to regenerate a whole animal.*

*Since Dolly the Sheep, scientists have used the techniques pioneered in Scotland to clone cattle, sheep, mice, goats and pigs.*

*She came to life in July 1996 near Edinburgh with a lot of help from Ian Wilmut and his colleagues at the Roslin Institute and PPL Therapeutics.*

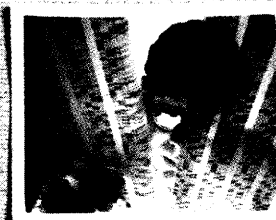

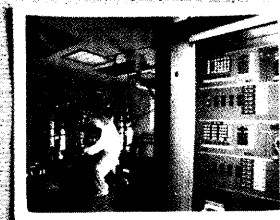

Dolly the Sheep was born in Scotland, but her fame is international. And she's just one example of Scotland's thriving and inventive biotech industry.

Scotland currently produces over 30 percent of the United Kingdom's postgraduates in genetics. It's the reason we have one of the largest biotechnology communities, as well as the largest concentration of pharmaceutical support organisations, in Europe. A list that includes companies such as Quintiles, BioReliance, Q-One Biotech and Inveresk Research.

Scottish Development International is a government-funded organisation that has a network of offices around the world that can help your biotech business tap into Scotland's key strengths in knowledge, high-level skills, technology and innovation.

Global companies are always looking for ways to gain a competitive advantage. Scottish Development International will help you find that expertise in Scotland. Find out more about bringing your business to Scotland. Or Scotland to your business.

Visit [www.scottishdevelopmentinternational.org](http://www.scottishdevelopmentinternational.org) for more information.

1) Adenovirus infection was induced in the hippocampal area with Ad5.CMV5-LacZ. Courtesy of Andrea Amthor, Clinical Genetics, Duke University, Durham, North Carolina, USA.  
2) Adenovirus infection was induced in the hippocampal area with Ad5.CMV5-LacZ. Cells illustrated are cortical pyramidal neurons retrogradely labeled from the injection site. Courtesy of Gene Technology, David G. Cantor and Peter B. Lownstein, Gene Therapeutics Research Institute, Cedars-Sinai Medical Center and University of California at Los Angeles, Los Angeles, CA, USA.  
3) Comparison of protein levels of over-expressed protein in A549 cells and HeLa cells infected with Ad5.CMV5-R1 (lanes 2-6, HeLa). Cells were mock-infected (lanes 1 and 7) or infected with Ad5 of 10 (lane 2, 8), 100 (lane 3, 9), 200 (lane 4, 10), 400 (lane 5, 11), and 800 (lane 6, 12). Reproduction of R1 production is 20-150% of the highest MOI tested. Courtesy of Bernard Massie, Biotechnology Research Institute, Cambridge, Canada.

ligation in a flash.

INTRODUCING THE

## QuickLigation™ Kit

FROM NEW ENGLAND BIOLABS

### Advantages

- **Fast** — 5 minutes for cohesive or blunt ends
- **Convenient** — ligation performed at room temperature
- **Flexible** — suitable for all common ligation reactions

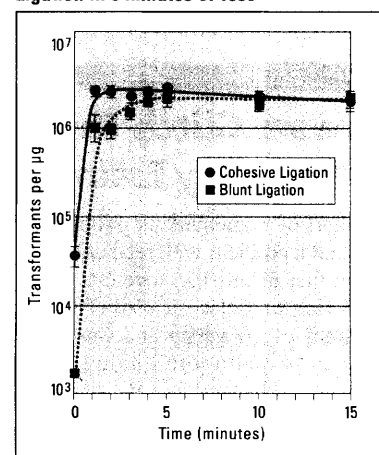

### NEB Quick Ligation Kit

#M2200S 30 reactions  
#M2200L 150 reactions

Includes: Quick T4 DNA Ligase,  
2X Quick Ligation Buffer, Protocols

► Using the Quick Ligation Kit protocol, blunt and cohesive inserts were ligated into LITMUS 28 vector cut with either *EcoR* V (blunt) or *Hind* III (cohesive). Ligation products were transformed into chemically competent *E. coli* DH-5α cells.

### Ligation in 5 minutes or less

where science is the priority

*We utilize biotechnology in a responsible way to develop innovative pharmaceuticals.*

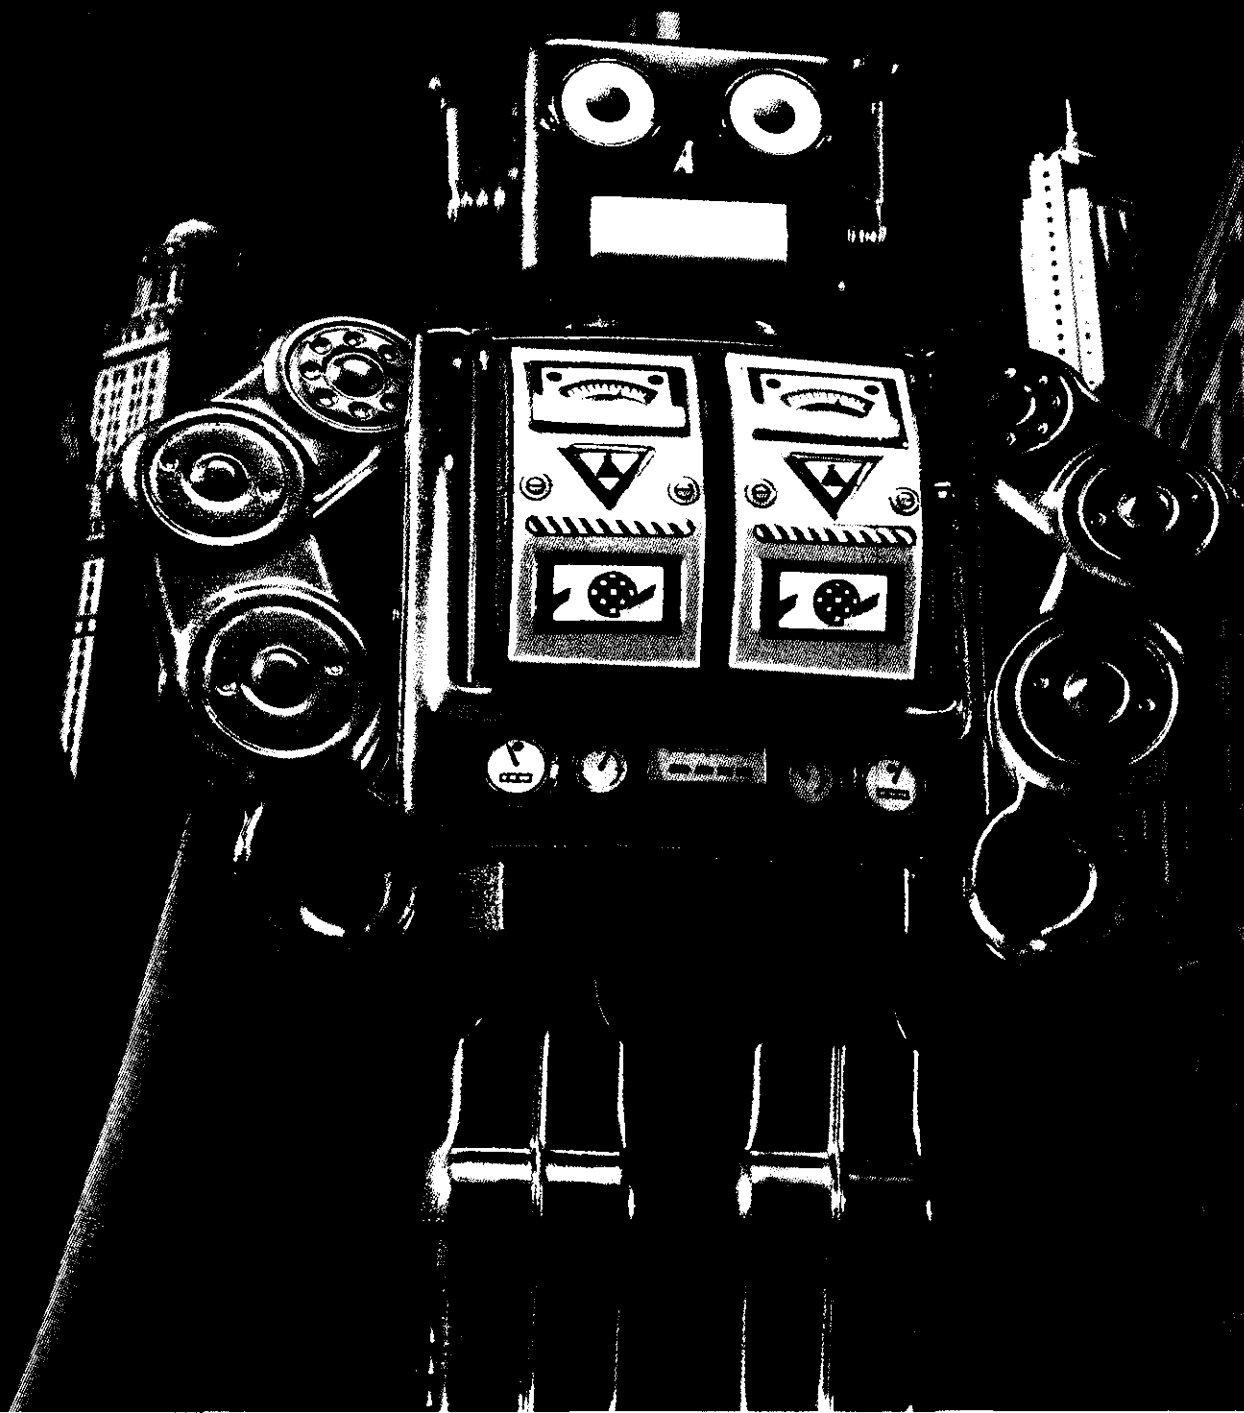

***So that discovery  
can lead to healthier lives.***

*Our Challenge is Life*

Life is a source of constant mystery. It's true for everyone, especially scientists trying to discover the nature of life itself. The decoding of the human genome will open up a completely new understanding of the actual processes of life and the causes of many illnesses. Aventis, a world-leading research-oriented pharmaceutical company will utilize these new findings for innovative pharmaceuticals, preventive vaccines and therapeutic proteins. After all, it is our long term objective not only to treat illnesses but to prevent them. So that people can lead healthier lives.

## Turn your robot into a super lean, mean DNA machine.

Bring amazing throughput power to your robotic nucleic acid purifications.

Whether you are using magnetic or membrane-based technologies, Promega gives you the strength to expand throughput to 96-well or even 384-well formats! So if you need your plasmid, PCR, sequence cleanup, genomic DNA and RNA purification to be lean, mean *and* fly at robotic super speeds, look up to Promega.

Visit [www.promega.com/dna-machine](http://www.promega.com/dna-machine) to learn more.

# Cytokine specific ELISA kits from BioSource!

Leading the way in cytokine network exploration.

## BioSource Quality Advantages

- ▶ Expert PhD supported technical service
- ▶ Sample size efficient,  $\leq 100 \mu\text{L}$  per sample
- ▶ Convenient single standard curve for quantitation of all sample types
- ▶ Consistent lot-to-lot performance
- ▶ Standards calibrated to NIBSC (when available)
- ▶ Experienced manufacturing for nearly 20 years
- ▶ Sensitivity to  $< 5 \text{ pg/mL}$

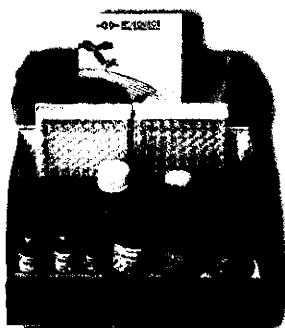

New! Cytokine ELISA kits: **Rt IL-18 • Ms/Rt TGF- $\beta$  • Hu DR-5 • Hu Trail**

## Cytokine ELISA kits

DR-5	IL-2R	IL-6R	IL-13	G-CSF	LIF	TNFR1
IL-1 $\alpha$	IL-3	IL-7	IL-15	GM-CSF	LIFR	Trail
IL-1RA	IL-4	IL-8	IL-16	IFN- $\alpha$	TGF- $\beta$	
IL-1 $\beta$	IL-5	IL-10	IL-17	IFN- $\beta$	TNF- $\alpha$	
IL-2	IL-6	IL-12	IL-18	IFN- $\gamma$	TNFR1	

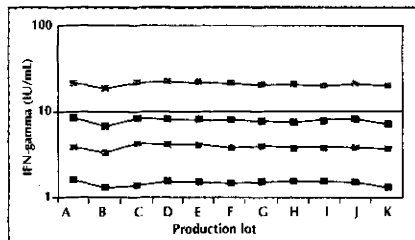

BioSource offers species specific ELISAs for human (Hu), mouse (Ms), rat (Rt), swine (Sw), bovine (B) and monkey (Mk). 1-, 2-, 5-plate and bulk sizes available.

See [biosource.com](http://biosource.com) for a complete product menu including: MAPK, Chemokines, Adhesion Molecules & Growth Factors.

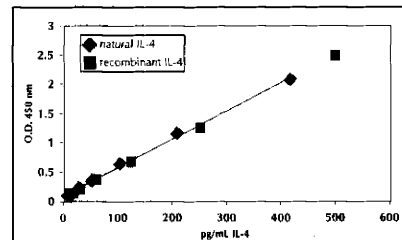

For research use only.

## Solid Performance. Every Time.

Lot-to-lot Reproducibility:  
Human IFN- $\gamma$  ELISA (Cat. #KHC4021).

Parallelism:  
Monkey IL-4 ELISA (Cat. #KPC0041).

Making the Complex Achievable

**TransIT-TKO®**

# Deliver A Knock-Out

**siRNA  
Transfection**

## TransIT-TKO® siRNA Transfection Reagent

RNA interference is a powerful mechanism for silencing genes and has become the chosen method for studying gene function and control. Mirus' TransIT-TKO® Transfection Reagent is the first reagent specifically developed for optimal transfection of siRNA in mammalian cells and is used by researchers worldwide. Join the leaders in the field and use the "gold standard", TransIT-TKO® siRNA Transfection Reagent.

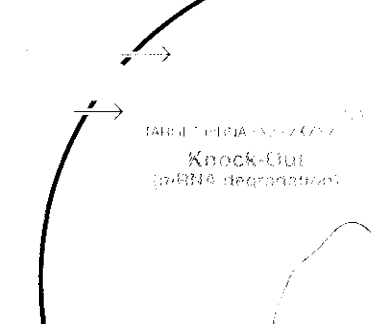

- **Optimized** - High efficiency transfection of siRNA for silencing endogenous genes and transgenes.
- **Versatile** - Low toxicity reagent proven to perform in a wide variety of cell lines.
- **Convenient** - One step reagent; add complexed TransIT-TKO® reagent and siRNA directly to cells in media.

Mirus specializes in developing and manufacturing state-of-the-art nucleic acid transfer and labeling technologies for use in biomedical research and drug discovery.

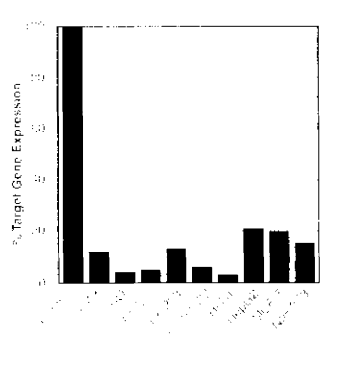

888-530-6001

[www.miruscorp.com](http://www.miruscorp.com)

TransIT-TKO / siRNA  
COMPLEX

TransIT-TKO® delivers siRNA to the cytoplasm where it binds to the target mRNA. The target mRNA is degraded resulting in inhibition of mRNA translation.

Efficiency of knock-out using TransIT-TKO® Transfection Reagent with 5 nM and firefly luciferase siRNA in various cell lines.

Call Mirus today to request a free copy of Mirus' Technical Report on TransIT-TKO® Transfection Reagent.

Gene Transfer Specialists™

## ***Getting Ready To Place Your Next Peptide Order?***

While other companies have concentrated on making things easy for themselves, we decided to concentrate on making things easier for you, the customer. We're a New Generation peptide company. And what that means for you is lightning quick quotes, faster turnaround times, simple and clear pricing tables, "smart" tech support that is actually available for you when you need it, and customer service like no other in the business and that's a fact! Plus...the highest quality product with a satisfaction guarantee.

Is it possible to make your every peptide order a pleasant experience? Absolutely!

So...if you're getting ready to place your next peptide order, call us and see why we say "Custom Peptides...Made Easy."

# WINNING SCIENTISTS

## COME FROM THE *coolest* PLACES

Raised north of the Arctic circle,  
near Sweden's famous Icehotel,  
Åsa Apelqvist was the regional winner  
of the 2001 Amersham Biosciences &  
Science Prize for Europe.

No matter where you come from, a journey of a thousand miles begins with a single step. So if you are embarking on the journey that is the study of science, here's your chance to gain international acclaim for yourself and your school. If you completed your Ph.D. in molecular biology\* during 2001, describe your work in a 1,000 word essay. Then enter it into the 2002 Amersham Biosciences & Science Prize for young scientists.

Your essay will be reviewed by a panel of distinguished scientists, who'll select one grand prize winner and up to seven other winners. The grand prize winner will get his or her essay published in *Science*, receive US\$25,000, and win a trip to the awards ceremony. Your essay may be submitted in English, French, German, Spanish, Japanese or Chinese (Mandarin). The closing date for entries is July 15, 2002.

Go to [www.amershamscienceprize.org](http://www.amershamscienceprize.org) to obtain the mandatory entry form. And take your step. Jamie H. Cate did and won the regional prize for North America in 1998. What's more, he recently won a prize for the best paper published in *Science*—"Crystal Structure of the Ribosome at 5.5 Å Resolution" *Science*, **292**: 883-896 (2001).

\* For the purpose of this prize, molecular biology is defined as "that part of biology which attempts to interpret biological events in terms of the physico-chemical properties of molecules in a cell" (McGraw-Hill Dictionary of Scientific and Technical Terms, 4th Edition).
